# Chapter 1

## BRIAR API Stubs

### gRPC Stubs Overview

Stubs are the 'compiled' versions of the protobuf files, although I use the word 'compiled' loosely because the protobuf files have actually been translated into the corresponding language's source code. These files are significantly more complex than the protobuf files but the names of messages and services defined in the protobuf files remain the same in the source files and the objects are ready to use once you have included the source files into your project.

### Instructions on how to use gRPC stubs for compatible languages

Google has instructions on how to use gRPC for the different supported languages on their main gRPC website. The link below will take you to a page where you can select a tutorial for your language of choice.

<https://grpc.io/docs/languages/>

## Chapter 2

# Namespace Index

### 2.1 Namespace List

Here is a list of all namespaces with brief descriptions:

<a href="#">briar</a> . . . . .	<a href="#">15</a>
<a href="#">briar.BriarGrpc</a> . . . . .	<a href="#">15</a>

## Chapter 3

# Hierarchical Index

### 3.1 Class Hierarchy

This inheritance list is sorted roughly, but not completely, alphabetically:

briar.BriarGrpc.BRIARService.BRIARServiceBase . . . . .	108
grpc.ClientBase	
briar.BriarGrpc.BRIARService.BRIARServiceClient . . . . .	123
pb.IBufferMessage	
briar.BriarGrpc.APIVersion . . . . .	25
briar.BriarGrpc.Attribute . . . . .	30
briar.BriarGrpc.BoolOption . . . . .	39
briar.BriarGrpc.BriarDatabase . . . . .	43
briar.BriarGrpc.BriarDatabaseInfo . . . . .	47
briar.BriarGrpc.BriarDuration . . . . .	55
briar.BriarGrpc.BriarDurations . . . . .	59
briar.BriarGrpc.BriarDurationsList . . . . .	65
briar.BriarGrpc.BriarErrorMessage . . . . .	69
briar.BriarGrpc.BriarErrors . . . . .	73
briar.BriarGrpc.BriarMatrix . . . . .	77
briar.BriarGrpc.BriarMedia . . . . .	84
briar.BriarGrpc.BriarPoint2D . . . . .	95
briar.BriarGrpc.BriarProgress . . . . .	99
briar.BriarGrpc.BriarRect . . . . .	103
briar.BriarGrpc.BriarServiceConfigurationReply . . . . .	178
briar.BriarGrpc.BriarServiceConfigurationRequest . . . . .	184
briar.BriarGrpc.BriarVector . . . . .	187
briar.BriarGrpc.ClusterConfidence . . . . .	191
briar.BriarGrpc.ClusterIds . . . . .	195
briar.BriarGrpc.ClusterReply . . . . .	199
briar.BriarGrpc.ClusterRequest . . . . .	204
briar.BriarGrpc.DatabaseCheckpointReply . . . . .	208
briar.BriarGrpc.DatabaseCheckpointRequest . . . . .	213
briar.BriarGrpc.DatabaseCheckpointSubjectRequest . . . . .	217
briar.BriarGrpc.DatabaseCreateReply . . . . .	222
briar.BriarGrpc.DatabaseCreateRequest . . . . .	227
briar.BriarGrpc.DatabaseDeleteReply . . . . .	232
briar.BriarGrpc.DatabaseDeleteRequest . . . . .	237
briar.BriarGrpc.DatabaseFinalizeReply . . . . .	241
briar.BriarGrpc.DatabaseFinalizeRequest . . . . .	246

briar.BriarGrpc.DatabaseHasEntryReply . . . . .	249
briar.BriarGrpc.DatabaseHasEntryRequest . . . . .	254
briar.BriarGrpc.DatabaseInfoReply . . . . .	258
briar.BriarGrpc.DatabaseInfoRequest . . . . .	263
briar.BriarGrpc.DatabaseInsertReply . . . . .	267
briar.BriarGrpc.DatabaseInsertRequest . . . . .	272
briar.BriarGrpc.DatabaseListEntriesRequest . . . . .	282
briar.BriarGrpc.DatabaseListReply . . . . .	286
briar.BriarGrpc.DatabaseListRequest . . . . .	290
briar.BriarGrpc.DatabaseListentriesReply . . . . .	277
briar.BriarGrpc.DatabaseLoadReply . . . . .	294
briar.BriarGrpc.DatabaseLoadRequest . . . . .	299
briar.BriarGrpc.DatabaseMergeReply . . . . .	303
briar.BriarGrpc.DatabaseMergeRequest . . . . .	308
briar.BriarGrpc.DatabaseMoveEntryReply . . . . .	313
briar.BriarGrpc.DatabaseMoveEntryRequest . . . . .	317
briar.BriarGrpc.DatabaseRemoveTmplsReply . . . . .	322
briar.BriarGrpc.DatabaseRemoveTmplsRequest . . . . .	326
briar.BriarGrpc.DatabaseRenameReply . . . . .	331
briar.BriarGrpc.DatabaseRenameRequest . . . . .	335
briar.BriarGrpc.DatabaseRetrieveReply . . . . .	339
briar.BriarGrpc.DatabaseRetrieveRequest . . . . .	344
briar.BriarGrpc.DetectReply . . . . .	366
briar.BriarGrpc.DetectRequest . . . . .	372
briar.BriarGrpc.Detection . . . . .	349
briar.BriarGrpc.DetectionOptions . . . . .	357
briar.BriarGrpc.Empty . . . . .	379
briar.BriarGrpc.EnhanceOptions . . . . .	382
briar.BriarGrpc.EnhanceReply . . . . .	388
briar.BriarGrpc.EnhanceRequest . . . . .	393
briar.BriarGrpc.EnrollCustomRequest . . . . .	399
briar.BriarGrpc.EnrollOptions . . . . .	411
briar.BriarGrpc.EnrollReply . . . . .	420
briar.BriarGrpc.EnrollRequest . . . . .	428
briar.BriarGrpc.EnrollmentInfo . . . . .	405
briar.BriarGrpc.ExtractOptions . . . . .	437
briar.BriarGrpc.ExtractReply . . . . .	444
briar.BriarGrpc.ExtractRequest . . . . .	451

## Chapter 4

# Class Index

### 4.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

<a href="#">briar.BriarGrpc.APIVersion</a>	
Query the implementation for the version	25
<a href="#">briar.BriarGrpc.Attribute</a>	30
<a href="#">briar.BriarGrpc.BoolOption</a>	39
<a href="#">briar.BriarGrpc.BriarDatabase</a>	
Stores images/detections/feature_vectors together in a searchable/referenceable data structure	43
<a href="#">briar.BriarGrpc.BriarDatabaseInfo</a>	
A message used for reporting information about a specific database	47
<a href="#">briar.BriarGrpc.BriarDuration</a>	55
<a href="#">briar.BriarGrpc.BriarDurations</a>	
Data structure to contain timing information for BRIAR functions	59
<a href="#">briar.BriarGrpc.BriarDurationsList</a>	65
<a href="#">briar.BriarGrpc.BriarErrorMessage</a>	
Human readable Error message with code	69
<a href="#">briar.BriarGrpc.BriarErrors</a>	
List of errors	73
<a href="#">briar.BriarGrpc.BriarMatrix</a>	
message to hold a vector of vectors	77
<a href="#">briar.BriarGrpc.BriarMedia</a>	
Media	84
<a href="#">briar.BriarGrpc.BriarPoint2D</a>	
message to hold a point	95
<a href="#">briar.BriarGrpc.BriarProgress</a>	
message that contains progress	99
<a href="#">briar.BriarGrpc.BriarRect</a>	
TODO optionally break this out into briar_geometry.proto message to hold rectangle	103
<a href="#">briar.BriarGrpc.BRIARService.BRIARServiceBase</a>	
Base class for server-side implementations of BRIARService	108
<a href="#">briar.BriarGrpc.BRIARService.BRIARServiceClient</a>	
Client for BRIARService	123
<a href="#">briar.BriarGrpc.BriarServiceConfigurationReply</a>	178
<a href="#">briar.BriarGrpc.BriarServiceConfigurationRequest</a>	184
<a href="#">briar.BriarGrpc.BriarVector</a>	
message to hold a vector	187
<a href="#">briar.BriarGrpc.ClusterConfidence</a>	
A messageure to represent a list of cluster confidence objects	191

<a href="#">briar.BriarGrpc.ClusterIds</a>	
A message to represent a list of cluster ids objects	195
<a href="#">briar.BriarGrpc.ClusterReply</a>	199
<a href="#">briar.BriarGrpc.ClusterRequest</a>	204
<a href="#">briar.BriarGrpc.DatabaseCheckpointReply</a>	208
<a href="#">briar.BriarGrpc.DatabaseCheckpointRequest</a>	213

# Namespace Documentation

### 6.1 briar Namespace Reference

#### Namespaces

- namespace [BriarGrpc](#)

### 6.2 briar.BriarGrpc Namespace Reference

#### Classes

- class [APIVersion](#)  
*Query the implementation for the version*
- class [Attribute](#)
- class [BoolOption](#)
- class [BriarDatabase](#)  
*Stores images/detections/feature\_vectors together in a searchable/referenceable data structure*
- class [BriarDatabaseInfo](#)  
*A message used for reporting information about a specific database*
- class [BriarDuration](#)
- class [BriarDurations](#)  
*Data structure to contain timing information for BRIAR functions.*
- class [BriarDurationsList](#)
- class [BriarErrorMessage](#)  
*Human readable Error message with code*
- class **BriarErrorReflection**  
*Holder for reflection information generated from briar/briar\_grpc/briar\_error.proto*
- class [BriarErrors](#)  
*List of errors*
- class [BriarMatrix](#)  
*message to hold a vector of vectors*
- class [BriarMedia](#)  
*Media*
- class [BriarPoint2D](#)

- message to hold a point*
- class [BriarProgress](#)
  - message that contains progress*
- class [BriarRect](#)
  - TODO optionally break this out into briar\_geometry.proto message to hold rectangle*
- class **BriarReflection**
  - Holder for reflection information generated from briar/briar\_grpc/briar.proto*
- class **BRIARService**
  - BRAIR solutions will be implemented as gRPC services.*
- class [BriarServiceConfigurationReply](#)
- class [BriarServiceConfigurationRequest](#)
- class **BriarServiceReflection**
  - Holder for reflection information generated from briar/briar\_grpc/briar\_service.proto*
- class [BriarVector](#)
  - message to hold a vector*
- class [ClusterConfidence](#)
  - A messageure to represent a list of cluster confidence objects.*
- class [ClusterIds](#)
  - A message to represent a list of cluster ids objects.*
- class [ClusterReply](#)
- class [ClusterRequest](#)
- class [DatabaseCheckpointReply](#)
- class [DatabaseCheckpointRequest](#)
- class [DatabaseCheckpointSubjectRequest](#)
- class [DatabaseCreateReply](#)
- class [DatabaseCreateRequest](#)

`VerifyProvidedTemplates` = 3 }

*Flag tells service what mode to run in when running verify command*

## 6.2.1 Enumeration Type Documentation

### 6.2.1.1 BiometricModality

```
enum briar.BriarGrpc.BiometricModality [strong]
```

Used to specify general biometric modalities.

Typical BRIAR modalities fall into three categories: FACE, BODY, or GAIT. UNSPECIFIED will typically would be the fusion of all modalities.

#### Enumerator

Unspecified	Use the fusion of all available modalities.
WholeBody	deprecated. Use BODY for general body appearance or features
Face	
Gait	
Body	
Anthropometry	
Head	
Behavior	
SoftBiometrics	
Fingerprint	
Iris	
Voice	
Hand	
Ear	
Palm	
Other	

### 6.2.1.2 BriarDataType

```
enum briar.BriarGrpc.BriarDataType [strong]
```

Enumeration for data types used by Briar

#### Enumerator

Empty	
String	
Int	stored as string
Float	stored as string
Bytes	raw data
Vector	floating point values seperated by commas
Pickle	
Xml	
Json	
Matrix	
Media	
Point	
Rect	
Buffer	

### 6.2.1.3 BriarError

```
enum briar.BriarGrpc.BriarError [strong]
```

Enum to define the different Briar error codes

#### Enumerator

BriarSuccess	No error
BriarUnknownError	Catch all error code
BriarInternalError	An internal SDK error was encountered
BriarOutOfMemory	Out of memory error
BriarInvalidSdkPath	Invalid SDK location
BriarBadSdkConfig	Invalid SDK configuration
BriarBadLicense	Incorrect license file
BriarMissingData	Missing SDK data
BriarInvalidGpu	The GPU is not functioning
BriarBadArgument	An argument to a BRIAR function is invalid
BriarOpenError	Failed to open a file
BriarReadError	Failed to read from a file
BriarWriteError	Failed to write to a file
BriarParseError	Failed to parse a file
BriarInvalidMedia	Failed to decode a media file
BriarOutOfBoundsAccess	Out of bounds access into a buffer
BriarMediaAtEnd	Media object is at the end of its data

## Enumerator

BriarInvalidAttributeKey	An invalid attribute key was provided
BriarMissingAttribute	A value for a valid attribute key is not present
BriarDuplicateId	<a href="#">Template</a> id already exists in a gallery
BriarMissingId	<a href="#">Template</a> id can't be found
BriarMissingFileName	An expected file name is not given
BriarIncorrectRole	Incorrect template role
BriarFailureToSerialize	Could not serialize a data structure
BriarFailureToDeserialize	Could not deserialize a data structure
BriarBatchAbortedEarly	Batch call aborted early due to error
BriarBatchFinishedWithErrors	Batch call finished, but with errors
BriarCallbackExitImmediately	Callback error indicating processing should stop immediately
BriarNotImplemented	Optional function return
BriarNumErrors	Utility to iterate over all errors

## 6.2.1.4 BriarServiceStatus

```
enum briar.BriarGrpc.BriarServiceStatus [strong]
```

Representation of the service's current status

## Enumerator

Unknown	
Ready	
Error	
Busy	

## 6.2.1.5 EnrollFlags

```
enum briar.BriarGrpc.EnrollFlags [strong]
```

Flags tell service what mode to run in when running enroll command

## Enumerator

EnrollFullImage	Do not run detections: extract from whole image
EnrollAutoDetection	Run detection on the image, generate detections
EnrollProvidedDetection	Extract and enroll from provided detections
EnrollProvidedTemplate	Enroll from provided template

### 6.2.1.6 EntryType

```
enum briar.BriarGrpc.EntryType [strong]
```

#### Enumerator

Unknown	Not typically used
Subject	Entry corresponds to a person (gallery) and entries should be aggregated under a person_id
Media	Entry corresponds to media (probe) and entries should be under a media_id

### 6.2.1.7 ExtractFlags

```
enum briar.BriarGrpc.ExtractFlags [strong]
```

Flag tells service what mode to run in when running an extract command

#### Enumerator

ExtractFullImage	
ExtractAutoDetection	
ExtractProvidedDetection	

### 6.2.1.8 FeatureVectorType

```
enum briar.BriarGrpc.FeatureVectorType [strong]
```

The data type of the feature vector returned by template\_get\_feature\_vector

#### Enumerator

BriarInt8	
BriarInt16	
BriarInt32	
BriarInt64	
BriarUInt8	
BriarUInt16	
BriarUInt32	
BriarUInt64	
BriarFloat	
BriarDouble	

### 6.2.1.9 SearchFlags

```
enum briar.BriarGrpc.SearchFlags [strong]
```

Tells service what mode to run in when running search command

Enumerator

SearchFullImage	Create template from the entire image and use resulting template
SearchAutoDetection	Run detection on image, generate detections, extract templates, and search
SearchProvidedDetections	Create templates from the provided detections
SearchProvidedTemplates	Use provided templates

### 6.2.1.10 VerifyFlags

```
enum briar.BriarGrpc.VerifyFlags [strong]
```

Flag tells service what mode to run in when running verify command

Enumerator

VerifyFullImage	Create template from the entire image and use resulting template
VerifyAutoDetection	
VerifyProvidedDetections	Create templates from the provided detections
VerifyProvidedTemplates	Use provided templates

## Chapter 7

# Class Documentation

### 7.1 briar.BriarGrpc.APIVersion Class Reference

Query the implementation for the version

- int [Minor](#) [get, set]
- static pb::MessageParser< [APIVersion](#) > [Parser](#) [get]
- int [Patch](#) [get, set]

### 7.1.1 Detailed Description

Query the implementation for the version

### 7.1.2 Constructor & Destructor Documentation

#### 7.1.2.1 [APIVersion\(\)](#) [1/2]

```
briar.BriarGrpc.APIVersion.APIVersion ( ) [inline]
```

### 7.1.2.2 APIVersion() [2/2]

```
briar.BriarGrpc.APIVersion.APIVersion (
    APIVersion other ) [inline]
```

## 7.1.3 Member Function Documentation

### 7.1.3.1 CalculateSize()

```
int briar.BriarGrpc.APIVersion.CalculateSize ( ) [inline]
```

### 7.1.3.2 Clone()

```
APIVersion briar.BriarGrpc.APIVersion.Clone ( ) [inline]
```

### 7.1.3.3 Equals() [1/2]

```
bool briar.BriarGrpc.APIVersion.Equals (
    APIVersion other ) [inline]
```

### 7.1.3.4 Equals() [2/2]

```
override bool briar.BriarGrpc.APIVersion.Equals (
    object other ) [inline]
```

### 7.1.3.5 GetHashCode()

```
override int briar.BriarGrpc.APIVersion.GetHashCode ( ) [inline]
```

### 7.1.3.6 MergeFrom() [1/2]

```
void briar.BriarGrpc.APIVersion.MergeFrom (
    APIVersion other ) [inline]
```

#### 7.1.3.7 MergeFrom() [2/2]

```
void briar.BriarGrpc.APIVersion.MergeFrom (
    pb::CodedInputStream input ) [inline]
```

#### 7.1.3.8 ToString()

```
override string briar.BriarGrpc.APIVersion.ToString ( ) [inline]
```

#### 7.1.3.9 WriteTo()

```
void briar.BriarGrpc.APIVersion.WriteTo (
    pb::CodedOutputStream output ) [inline]
```

### 7.1.4 Member Data Documentation

#### 7.1.4.1 MajorFieldNumber

```
const int briar.BriarGrpc.APIVersion.MajorFieldNumber = 1 [static]
```

Field number for the "major" field.

#### 7.1.4.2 MinorFieldNumber

```
const int briar.BriarGrpc.APIVersion.MinorFieldNumber = 2 [static]
```

Field number for the "minor" field.

#### 7.1.4.3 PatchFieldNumber

```
const int briar.BriarGrpc.APIVersion.PatchFieldNumber = 3 [static]
```

Field number for the "patch" field.

## 7.1.5 Property Documentation

### 7.1.5.1 Descriptor

`pbr.MessageDescriptor briar.BriarGrpc.APIVersion.Descriptor [static], [get]`

### 7.1.5.2 Major

`int briar.BriarGrpc.APIVersion.Major [get], [set]`

### 7.1.5.3 Minor

`int briar.BriarGrpc.APIVersion.Minor [get], [set]`

### 7.1.5.4 Parser

`pb.MessageParser<APIVersion> briar.BriarGrpc.APIVersion.Parser [static], [get]`

### 7.1.5.5 Patch

`int briar.BriarGrpc.APIVersion.Patch [get], [set]`

The documentation for this class was generated from the following file:

- `/home/qdb/git/briar-api/lib/csharp/Briar.cs`

## 7.2 briar.BriarGrpc.Attribute Class Reference

## 7.2.1 Constructor & Destructor Documentation

### 7.2.1.1 Attribute() [1/2]

```
briar.BriarGrpc.Attribute.Attribute ( ) [inline]
```

### 7.2.1.2 Attribute() [2/2]

```
briar.BriarGrpc.Attribute.Attribute (
    Attribute other ) [inline]
```

## 7.2.2 Member Function Documentation

### 7.2.2.1 CalculateSize()

```
int briar.BriarGrpc.Attribute.CalculateSize ( ) [inline]
```

### 7.2.2.2 Clone()

```
Attribute briar.BriarGrpc.Attribute.Clone ( ) [inline]
```

### 7.2.2.3 Equals() [1/2]

```
bool briar.BriarGrpc.Attribute.Equals (
    Attribute other ) [inline]
```

### 7.2.2.4 Equals() [2/2]

```
override bool briar.BriarGrpc.Attribute.Equals (
    object other ) [inline]
```

#### 7.2.2.5 GetHashCode()

```
override int briar.BriarGrpc.Attribute.GetHashCode ( ) [inline]
```

#### 7.2.2.6 MergeFrom() [1/2]

```
void briar.BriarGrpc.Attribute.MergeFrom (
    Attribute other ) [inline]
```

#### 7.2.2.7 MergeFrom() [2/2]

```
void briar.BriarGrpc.Attribute.MergeFrom (
    pb::CodedInputStream input ) [inline]
```

#### 7.2.2.8 ToString()

```
override string briar.BriarGrpc.Attribute.ToString ( ) [inline]
```

#### 7.2.2.9 WriteTo()

```
void briar.BriarGrpc.Attribute.WriteTo (
    pb::CodedOutputStream output ) [inline]
```

### 7.2.3 Member Data Documentation

#### 7.2.3.1 BufferFieldNumber

```
const int briar.BriarGrpc.Attribute.BufferFieldNumber = 3 [static]
```

Field number for the "buffer" field.

### 7.2.3.2 DescriptionFieldName

```
const int briar.BriarGrpc.Attribute.DescriptionFieldName = 2 [static]
```

Field number for the "description" field.

### 7.2.3.3 FvalueFieldName

```
const int briar.BriarGrpc.Attribute.FvalueFieldName = 4 [static]
```

Field number for the "fvalue" field.

### 7.2.3.4 IvalueFieldName

```
const int briar.BriarGrpc.Attribute.IvalueFieldName = 5 [static]
```

Field number for the "ivalue" field.

### 7.2.3.5 JsonFieldName

```
const int briar.BriarGrpc.Attribute.JsonFieldName = 8 [static]
```

Field number for the "json" field.

### 7.2.3.6 KeyFieldName

```
const int briar.BriarGrpc.Attribute.KeyFieldName = 1 [static]
```

Field number for the "key" field.

### 7.2.3.7 MatrixFieldName

```
const int briar.BriarGrpc.Attribute.MatrixFieldName = 9 [static]
```

Field number for the "matrix" field.

### 7.2.3.8 MediaFieldNumber

```
const int briar.BriarGrpc.Attribute.MediaFieldNumber = 11 [static]
```

Field number for the "media" field.

### 7.2.3.9 PickleFieldNumber

```
const int briar.BriarGrpc.Attribute.PickleFieldNumber = 7 [static]
```

Field number for the "pickle" field.

### 7.2.3.10 PointFieldNumber

```
const int briar.BriarGrpc.Attribute.PointFieldNumber = 12 [static]
```

Field number for the "point" field.

### 7.2.3.11 RectFieldNumber

```
const int briar.BriarGrpc.Attribute.RectFieldNumber = 13 [static]
```

Field number for the "rect" field.

### 7.2.3.12 TextFieldNumber

```
const int briar.BriarGrpc.Attribute.TextFieldNumber = 6 [static]
```

Field number for the "text" field.

### 7.2.3.13 TypeFieldNumber

```
const int briar.BriarGrpc.Attribute.TypeFieldNumber = 15 [static]
```

Field number for the "type" field.

#### 7.2.3.14 VectorFieldNumber

```
const int briar.BriarGrpc.Attribute.VectorFieldNumber = 10 [static]
```

Field number for the "vector" field.

#### 7.2.3.15 XmlFieldNumber

```
const int briar.BriarGrpc.Attribute.XmlFieldNumber = 14 [static]
```

Field number for the "xml" field.

### 7.2.4 Property Documentation

#### 7.2.4.1 Buffer

```
pb.ByteString briar.BriarGrpc.Attribute.Buffer [get], [set]
```

#### 7.2.4.2 Description

```
string briar.BriarGrpc.Attribute.Description [get], [set]
```

A text description on the content or type hint

#### 7.2.4.3 Descriptor

```
pbr.MessageDescriptor briar.BriarGrpc.Attribute.Descriptor [static], [get]
```

#### 7.2.4.4 Fvalue

```
float briar.BriarGrpc.Attribute.Fvalue [get], [set]
```

#### 7.2.4.5 Ivalue

```
int briar.BriarGrpc.Attribute.Ivalue [get], [set]
```

#### 7.2.4.6 Json

```
pb.ByteString briar.BriarGrpc.Attribute.Json [get], [set]
```

#### 7.2.4.7 Key

```
string briar.BriarGrpc.Attribute.Key [get], [set]
```

uid for this attribute

#### 7.2.4.8 Matrix

```
global.briar.BriarGrpc.BriarMatrix briar.BriarGrpc.Attribute.Matrix [get], [set]
```

#### 7.2.4.9 Media

```
global.briar.BriarGrpc.BriarMedia briar.BriarGrpc.Attribute.Media [get], [set]
```

#### 7.2.4.10 Parser

```
pb.MessageParser<Attribute> briar.BriarGrpc.Attribute.Parser [static], [get]
```

#### 7.2.4.11 Pickle

```
pb.ByteString briar.BriarGrpc.Attribute.Pickle [get], [set]
```

#### 7.2.4.12 Point

```
global.briar.BriarGrpc.BriarPoint2D briar.BriarGrpc.Attribute.Point [get], [set]
```

#### 7.2.4.13 Rect

```
global.briar.BriarGrpc.BriarRect briar.BriarGrpc.Attribute.Rect [get], [set]
```

#### 7.2.4.14 Text

```
string briar.BriarGrpc.Attribute.Text [get], [set]
```

#### 7.2.4.15 Type

```
global.briar.BriarGrpc.BriarDataType briar.BriarGrpc.Attribute.Type [get], [set]
```

#### 7.2.4.16 Vector

```
global.briar.BriarGrpc.BriarVector briar.BriarGrpc.Attribute.Vector [get], [set]
```

#### 7.2.4.17 Xml

```
pb.ByteString briar.BriarGrpc.Attribute.Xml [get], [set]
```

```

### 7.5.4 Member Data Documentation

#### 7.5.4.1 AttributesFieldName

```
const int briar.BriarGrpc.BriarDatabaseInfo.AttributesFieldName = 10 [static]
```

Field number for the "attributes" field.

#### 7.5.4.2 AverageEntrySizeFieldName

```
const int briar.BriarGrpc.BriarDatabaseInfo.AverageEntrySizeFieldName = 6 [static]
```

Field number for the "average\_entry\_size" field.

#### 7.5.4.3 EntryCountFieldName

```
const int briar.BriarGrpc.BriarDatabaseInfo.EntryCountFieldName = 2 [static]
```

Field number for the "entry\_count" field.

#### 7.5.4.4 EntryIdsFieldName

```
const int briar.BriarGrpc.BriarDatabaseInfo.EntryIdsFieldName = 11 [static]
```

Field number for the "entry\_ids" field.

#### 7.5.4.5 EntrySizesFieldName

```
const int briar.BriarGrpc.BriarDatabaseInfo.EntrySizesFieldName = 13 [static]
```

Field number for the "entry\_sizes" field.

#### 7.5.4.6 FailedEnrollmentCountFieldName

```
const int briar.BriarGrpc.BriarDatabaseInfo.FailedEnrollmentCountFieldName = 4 [static]
```

Field number for the "failed\_enrollment\_count" field.

#### 7.5.4.7 ModalitiesFieldNumber

```
const int briar.BriarGrpc.BriarDatabaseInfo.ModalitiesFieldNumber = 9 [static]
```

Field number for the "modalities" field.

#### 7.5.4.8 NameFieldNumber

```
const int briar.BriarGrpc.BriarDatabaseInfo.NameFieldNumber = 1 [static]
```

Field number for the "name" field.

#### 7.5.4.9 TemplateCountFieldNumber

```
const int briar.BriarGrpc.BriarDatabaseInfo.TemplateCountFieldNumber = 3 [static]
```

Field number for the "template\_count" field.

#### 7.5.4.10 TemplatesPerEntryFieldNumber

```
const int briar.BriarGrpc.BriarDatabaseInfo.TemplatesPerEntryFieldNumber = 12 [static]
```

Field number for the "templates\_per\_entry" field.

#### 7.5.4.11 TotalDatabaseSizeFieldNumber

```
const int briar.BriarGrpc.BriarDatabaseInfo.TotalDatabaseSizeFieldNumber = 5 [static]
```

Field number for the "total\_database\_size" field.

### 7.5.5 Property Documentation

#### 7.5.5.1 Attributes

```
pb::RepeatedField<global.briar.BriarGrpc.Attribute> briar.BriarGrpc.BriarDatabaseInfo.Attributes  
[get]
```

OPTIONAL: other attributes that may be custom to a performers

### 7.5.5.2 AverageEntrySize

```
float briar.BriarGrpc.BriarDatabaseInfo.AverageEntrySize [get], [set]
```

REQUIRED FOR EVALUATION: average size of an entry in KB

### 7.5.5.3 Descriptor

```
pbr.MessageDescriptor briar.BriarGrpc.BriarDatabaseInfo.Descriptor [static], [get]
```

### 7.5.5.4 EntryCount

```
long briar.BriarGrpc.BriarDatabaseInfo.EntryCount [get], [set]
```

REQUIRED: number of entries in the database

### 7.5.5.5 EntryIds

```
pbc.RepeatedField<string> briar.BriarGrpc.BriarDatabaseInfo.EntryIds [get]
```

REQUIRED FOR EVALUATION: Returns a list of all entries (as denoted by their appropriate "entryId" from signature set) contained within the database

### 7.5.5.6 EntrySizes

```
pbc.RepeatedField<float> briar.BriarGrpc.BriarDatabaseInfo.EntrySizes [get]
```

REQUIRED FOR EVALUATION: return the stored size of each entry in the database (KB) in the same order as entry\_ids

### 7.5.5.7 FailedEnrollmentCount

```
long briar.BriarGrpc.BriarDatabaseInfo.FailedEnrollmentCount [get], [set]
```

REQUIRED: number of failed enrollments into the database

#### 7.5.5.8 Modalities

```
pbc.RepeatedField<global.briar.BriarGrpc.BiometricModality> briar.BriarGrpc.BriarDatabaseInfo.Modalities [get]
```

OPTIONAL: modality of the database (could be multiple if the database includes multiple modalities)

#### 7.5.5.9 Name

```
string briar.BriarGrpc.BriarDatabaseInfo.Name [get], [set]
```

REQUIRED: database name

#### 7.5.5.10 Parser

```
pb.MessageParser<BriarDatabaseInfo> briar.BriarGrpc.BriarDatabaseInfo.Parser [static], [get]
```

#### 7.5.5.11 TemplateCount

```
long briar.BriarGrpc.BriarDatabaseInfo.TemplateCount [get], [set]
```

REQUIRED: number of unique templates in the database (could be larger than number of entries)

#### 7.5.5.12 TemplatesPerEntry

```
pbc.RepeatedField<int> briar.BriarGrpc.BriarDatabaseInfo.TemplatesPerEntry [get]
```

OPTIONAL : Returns the number of templates used to generate a each entry.

Should be in the same order as "entry\_ids"

#### 7.5.5.13 TotalDatabaseSize

```
float briar.BriarGrpc.BriarDatabaseInfo.TotalDatabaseSize [get], [set]
```

REQUIRED FOR EVALUATION: size of database in KB

*The total time in microseconds it took to execute the function*

### 7.7.1 Detailed Description

Data structure to contain timing information for BRIAR functions.

All timing information is in microseconds

### 7.7.2 Constructor & Destructor Documentation

### 7.7.2.1 BriarDurations() [1/2]

```
briar.BriarGrpc.BriarDurations.BriarDurations ( ) [inline]
```

### 7.7.2.2 BriarDurations() [2/2]

```
briar.BriarGrpc.BriarDurations.BriarDurations (
    BriarDurations other ) [inline]
```

## 7.7.3 Member Function Documentation

### 7.7.3.1 CalculateSize()

```
int briar.BriarGrpc.BriarDurations.CalculateSize ( ) [inline]
```

### 7.7.3.2 Clone()

```
BriarDurations briar.BriarGrpc.BriarDurations.Clone ( ) [inline]
```

### 7.7.3.3 Equals() [1/2]

```
bool briar.BriarGrpc.BriarDurations.Equals (
    BriarDurations other ) [inline]
```

### 7.7.3.4 Equals() [2/2]

```
override bool briar.BriarGrpc.BriarDurations.Equals (
    object other ) [inline]
```

### 7.7.3.5 GetHashCode()

```
override int briar.BriarGrpc.BriarDurations.GetHashCode ( ) [inline]
```

### 7.7.3.6 MergeFrom() [1/2]

```
void briar.BriarGrpc.BriarDurations.MergeFrom (
    BriarDurations other ) [inline]
```

### 7.7.3.7 MergeFrom() [2/2]

```
void briar.BriarGrpc.BriarDurations.MergeFrom (
    pb::CodedInputStream input ) [inline]
```

### 7.7.3.8 ToString()

```
override string briar.BriarGrpc.BriarDurations.ToString ( ) [inline]
```

### 7.7.3.9 WriteTo()

```
void briar.BriarGrpc.BriarDurations.WriteTo (
    pb::CodedOutputStream output ) [inline]
```

## 7.7.4 Member Data Documentation

### 7.7.4.1 ClientDurationFileLevelFieldNumber

```
const int briar.BriarGrpc.BriarDurations.ClientDurationFileLevelFieldNumber = 1 [static]
```

Field number for the "client\_duration\_file\_level" field.

### 7.7.4.2 ClientDurationFrameLevelFieldNumber

```
const int briar.BriarGrpc.BriarDurations.ClientDurationFrameLevelFieldNumber = 2 [static]
```

Field number for the "client\_duration\_frame\_level" field.

#### 7.7.4.3 GrpcInboundTransferDurationFieldNumber

```
const int briar.BriarGrpc.BriarDurations.GrpcInboundTransferDurationFieldNumber = 4 [static]
```

Field number for the "grpc\_inbound\_transfer\_duration" field.

#### 7.7.4.4 GrpcOutboundTransferDurationFieldNumber

```
const int briar.BriarGrpc.BriarDurations.GrpcOutboundTransferDurationFieldNumber = 3 [static]
```

Field number for the "grpc\_outbound\_transfer\_duration" field.

#### 7.7.4.5 ServiceDurationFieldNumber

```
const int briar.BriarGrpc.BriarDurations.ServiceDurationFieldNumber = 5 [static]
```

Field number for the "service\_duration" field.

#### 7.7.4.6 SubDurationsFieldNumber

```
const int briar.BriarGrpc.BriarDurations.SubDurationsFieldNumber = 6 [static]
```

Field number for the "sub\_durations" field.

#### 7.7.4.7 TotalDurationFieldNumber

```
const int briar.BriarGrpc.BriarDurations.TotalDurationFieldNumber = 7 [static]
```

Field number for the "total\_duration" field.

### 7.7.5 Property Documentation

#### 7.7.5.1 ClientDurationFileLevel

```
global.briar.BriarGrpc.BriarDuration briar.BriarGrpc.BriarDurations.ClientDurationFileLevel  
[get], [set]
```

This will always be populated with the duration taken by the BRIAR API client for the file-level operations

### 7.7.5.2 ClientDurationFrameLevel

```
global.briar.BriarGrpc.BriarDuration briar.BriarGrpc.BriarDurations.ClientDurationFrameLevel  
[get], [set]
```

This will always be populated with the duration taken by the BRIAR API client for the frame-level operations

### 7.7.5.3 Descriptor

```
pbr.MessageDescriptor briar.BriarGrpc.BriarDurations.Descriptor [static], [get]
```

### 7.7.5.4 GrpcInboundTransferDuration

```
global.briar.BriarGrpc.BriarDuration briar.BriarGrpc.BriarDurations.GrpcInboundTransfer↔  
Duration [get], [set]
```

This will always be populated by the duration taken to perform the inbound API data response across the gRPC channel

### 7.7.5.5 GrpcOutboundTransferDuration

```
global.briar.BriarGrpc.BriarDuration briar.BriarGrpc.BriarDurations.GrpcOutboundTransfer↔  
Duration [get], [set]
```

This will always be populated by the duration taken to perform the outbound API request across the gRPC channel

### 7.7.5.6 Parser

```
pb.MessageParser<BriarDurations> briar.BriarGrpc.BriarDurations.Parser [static], [get]
```

### 7.7.5.7 ServiceDuration

```
global.briar.BriarGrpc.BriarDuration briar.BriarGrpc.BriarDurations.ServiceDuration [get],  
[set]
```

### 7.7.5.8 SubDurations

```
pbc.MapField<string, global.briar.BriarGrpc.BriarDuration> briar.BriarGrpc.BriarDurations.↔  
SubDurations [get]
```

A list of timings of subroutines within a function

### 7.7.5.9 TotalDuration

```
global.briar.BriarGrpc.BriarDuration briar.BriarGrpc.BriarDurations.TotalDuration [get], [set]
```

The total time in microseconds it took to execute the function

*Optional: sources for each row*

### 7.11.1 Detailed Description

message to hold a vector of vectors

### 7.11.2 Constructor & Destructor Documentation

### 7.11.2.1 BriarMatrix() [1/2]

```
briar.BriarGrpc.BriarMatrix.BriarMatrix ( ) [inline]
```

### 7.11.2.2 BriarMatrix() [2/2]

```
briar.BriarGrpc.BriarMatrix.BriarMatrix (
    BriarMatrix other ) [inline]
```

## 7.11.3 Member Function Documentation

### 7.11.3.1 CalculateSize()

```
int briar.BriarGrpc.BriarMatrix.CalculateSize ( ) [inline]
```

### 7.11.3.2 Clone()

```
BriarMatrix briar.BriarGrpc.BriarMatrix.Clone ( ) [inline]
```

### 7.11.3.3 Equals() [1/2]

```
bool briar.BriarGrpc.BriarMatrix.Equals (
    BriarMatrix other ) [inline]
```

### 7.11.3.4 Equals() [2/2]

```
override bool briar.BriarGrpc.BriarMatrix.Equals (
    object other ) [inline]
```

### 7.11.3.5 GetHashCode()

```
override int briar.BriarGrpc.BriarMatrix.GetHashCode ( ) [inline]
```

#### 7.11.3.6 MergeFrom() [1/2]

```
void briar.BriarGrpc.BriarMatrix.MergeFrom (
    BriarMatrix other ) [inline]
```

#### 7.11.3.7 MergeFrom() [2/2]

```
void briar.BriarGrpc.BriarMatrix.MergeFrom (
    pb::CodedInputStream input ) [inline]
```

#### 7.11.3.8 ToString()

```
override string briar.BriarGrpc.BriarMatrix.ToString ( ) [inline]
```

#### 7.11.3.9 WriteTo()

```
void briar.BriarGrpc.BriarMatrix.WriteTo (
    pb::CodedOutputStream output ) [inline]
```

### 7.11.4 Member Data Documentation

#### 7.11.4.1 ColumnAttributesFieldNumber

```
const int briar.BriarGrpc.BriarMatrix.ColumnAttributesFieldNumber = 7 [static]
```

Field number for the "column\_attributes" field.

#### 7.11.4.2 ColumnHeadersFieldNumber

```
const int briar.BriarGrpc.BriarMatrix.ColumnHeadersFieldNumber = 1 [static]
```

Field number for the "column\_headers" field.

#### 7.11.4.3 ColumnHeadersIntegerFieldNumber

```
const int briar.BriarGrpc.BriarMatrix.ColumnHeadersIntegerFieldNumber = 3 [static]
```

Field number for the "column\_headers\_integer" field.

#### 7.11.4.4 ColumnSourcesFieldNumber

```
const int briar.BriarGrpc.BriarMatrix.ColumnSourcesFieldNumber = 5 [static]
```

Field number for the "column\_sources" field.

#### 7.11.4.5 RowAttributesFieldNumber

```
const int briar.BriarGrpc.BriarMatrix.RowAttributesFieldNumber = 8 [static]
```

Field number for the "row\_attributes" field.

#### 7.11.4.6 RowHeadersFieldNumber

```
const int briar.BriarGrpc.BriarMatrix.RowHeadersFieldNumber = 2 [static]
```

Field number for the "row\_headers" field.

#### 7.11.4.7 RowHeadersIntegerFieldNumber

```
const int briar.BriarGrpc.BriarMatrix.RowHeadersIntegerFieldNumber = 4 [static]
```

Field number for the "row\_headers\_integer" field.

#### 7.11.4.8 RowsFieldNumber

```
const int briar.BriarGrpc.BriarMatrix.RowsFieldNumber = 9 [static]
```

Field number for the "rows" field.

#### 7.11.4.9 RowSourcesFieldNumber

```
const int briar.BriarGrpc.BriarMatrix.RowSourcesFieldNumber = 6 [static]
```

Field number for the "row\_sources" field.

### 7.11.5 Property Documentation

#### 7.11.5.1 ColumnAttributes

```
pbc.RepeatedField<global.briar.BriarGrpc.Attribute> briar.BriarGrpc.BriarMatrix.ColumnAttributes [get]
```

#### 7.11.5.2 ColumnHeaders

```
pbc.RepeatedField<string> briar.BriarGrpc.BriarMatrix.ColumnHeaders [get]
```

Optional: headers for each column

#### 7.11.5.3 ColumnHeadersInteger

```
pbc.RepeatedField<int> briar.BriarGrpc.BriarMatrix.ColumnHeadersInteger [get]
```

Optional: integer headers for each column

#### 7.11.5.4 ColumnSources

```
pbc.RepeatedField<string> briar.BriarGrpc.BriarMatrix.ColumnSources [get]
```

Optional: sources for each column

#### 7.11.5.5 Descriptor

```
pbr.MessageDescriptor briar.BriarGrpc.BriarMatrix.Descriptor [static], [get]
```

### 7.11.5.6 Parser

`pb.MessageParser<BriarMatrix> briar.BriarGrpc.BriarMatrix.Parser [static], [get]`

### 7.11.5.7 RowAttributes

`pbc.RepeatedField<global.briar.BriarGrpc.Attribute> briar.BriarGrpc.BriarMatrix.RowAttributes [get]`

### 7.11.5.8 RowHeaders

`pbc.RepeatedField<string> briar.BriarGrpc.BriarMatrix.RowHeaders [get]`

Optional: headers for each row

### 7.11.5.9 RowHeadersInteger

`pbc.RepeatedField<int> briar.BriarGrpc.BriarMatrix.RowHeadersInteger [get]`

Optional: integer headers for each row

### 7.11.5.10 Rows

`pbc.RepeatedField<global.briar.BriarGrpc.BriarVector> briar.BriarGrpc.BriarMatrix.Rows [get]`

arbitrary length array of vectors to store row

### 7.11.5.11 RowSources

`pbc.RepeatedField<string> briar.BriarGrpc.BriarMatrix.RowSources [get]`

Optional: sources for each row

*Field number for the "source\_type" field.*
- const int [TypeFieldNumber](#) = 11  
*Field number for the "type" field.*
- const int [WidthFieldNumber](#) = 1  
*Field number for the "width" field.*

## Properties

- int [Channels](#) [get, set]  
*Number of color layers*
- pb::ByteString [Data](#) [get, set]  
*Array of bytes containing media data.*
- string [Datetime](#) [get, set]  
*Optional: timestamp for tracking purposes*
- string [Description](#) [get, set]

- Human friendly String to document image*
- static pbr::MessageDescriptor [Descriptor](#) [get]
- int [FrameCount](#) [get, set]
  - Number of frames in this media message*
- int [FrameEnd](#) [get, set]
  - End frame of media*
- int [FrameNumber](#) [get, set]
  - If this is a single frame of a video, this denotes the frame number*
- float [FrameRate](#) [get, set]
  - Framerate in frames/second*
- int [FrameStart](#) [get, set]
  - Start frame of media*
- int [Height](#) [get, set]
  - Height of img in px*
- bool [IsCropped](#) [get, set]
  - Optional: A boolean to specify if the given media file is pre-cropped or full*
- pbc::RepeatedField< global::briar.BriarGrpc.MediaMetadata > [Metadata](#) [get]
  - Optional metadata for the entire media stream;*
- static pb::MessageParser< [BriarMedia](#) > [Parser](#) [get]
- int [SegmentId](#) [get, set]
  - A number identifying the segment in a stream of media*
- int [SegmentTotal](#) [get, set]
  - A number specifying the total number of segments to expect.*
- string [ServersideSource](#) [get, set]
  - A string describing the media location if it resides on the server side (i.e.*
- string [Source](#) [get, set]
  - A string describing the source of the media (url,filepath,etc.)*
- global::briar.BriarGrpc.BriarMedia.Types.DataType [SourceType](#) [get, set]
  - Data type of the source of the media (e.g.*
- global::briar.BriarGrpc.BriarMedia.Types.DataType [Type](#) [get, set]
  - Data type of the media data*
- int [Width](#) [get, set]
  - Width of img in px*

## 7.12.1 Detailed Description

Media

## 7.12.2 Constructor & Destructor Documentation

### 7.12.2.1 BriarMedia() [1/2]

```
briar.BriarGrpc.BriarMedia.BriarMedia ( ) [inline]
```

### 7.12.2.2 BriarMedia() [2/2]

```
briar.BriarGrpc.BriarMedia.BriarMedia (
    BriarMedia other ) [inline]
```

## 7.12.3 Member Function Documentation

### 7.12.3.1 CalculateSize()

```
int briar.BriarGrpc.BriarMedia.CalculateSize ( ) [inline]
```

### 7.12.3.2 Clone()

```
BriarMedia briar.BriarGrpc.BriarMedia.Clone ( ) [inline]
```

### 7.12.3.3 Equals() [1/2]

```
bool briar.BriarGrpc.BriarMedia.Equals (
    BriarMedia other ) [inline]
```

### 7.12.3.4 Equals() [2/2]

```
override bool briar.BriarGrpc.BriarMedia.Equals (
    object other ) [inline]
```

### 7.12.3.5 GetHashCode()

```
override int briar.BriarGrpc.BriarMedia.GetHashCode ( ) [inline]
```

### 7.12.3.6 MergeFrom() [1/2]

```
void briar.BriarGrpc.BriarMedia.MergeFrom (
    BriarMedia other ) [inline]
```

### 7.12.3.7 MergeFrom() [2/2]

```
void briar.BriarGrpc.BriarMedia.MergeFrom (  
    pb::CodedInputStream input ) [inline]
```

### 7.12.3.8 ToString()

```
override string briar.BriarGrpc.BriarMedia.ToString ( ) [inline]
```

### 7.12.3.9 WriteTo()

```
void briar.BriarGrpc.BriarMedia.WriteTo (  
    pb::CodedOutputStream output ) [inline]
```

## 7.12.4 Member Data Documentation

### 7.12.4.1 ChannelsFieldNumber

```
const int briar.BriarGrpc.BriarMedia.ChannelsFieldNumber = 3 [static]
```

Field number for the "channels" field.

### 7.12.4.2 DataFieldNumber

```
const int briar.BriarGrpc.BriarMedia.DataFieldNumber = 13 [static]
```

Field number for the "data" field.

### 7.12.4.3 DatetimeFieldNumber

```
const int briar.BriarGrpc.BriarMedia.DatetimeFieldNumber = 17 [static]
```

Field number for the "datetime" field.

#### 7.12.4.4 DescriptionFieldNumber

```
const int briar.BriarGrpc.BriarMedia.DescriptionFieldNumber = 16 [static]
```

Field number for the "description" field.

#### 7.12.4.5 FrameCountFieldNumber

```
const int briar.BriarGrpc.BriarMedia.FrameCountFieldNumber = 4 [static]
```

Field number for the "frame\_count" field.

#### 7.12.4.6 FrameEndFieldNumber

```
const int briar.BriarGrpc.BriarMedia.FrameEndFieldNumber = 6 [static]
```

Field number for the "frame\_end" field.

#### 7.12.4.7 FrameNumberFieldNumber

```
const int briar.BriarGrpc.BriarMedia.FrameNumberFieldNumber = 10 [static]
```

Field number for the "frame\_number" field.

#### 7.12.4.8 FrameRateFieldNumber

```
const int briar.BriarGrpc.BriarMedia.FrameRateFieldNumber = 7 [static]
```

Field number for the "frame\_rate" field.

#### 7.12.4.9 FrameStartFieldNumber

```
const int briar.BriarGrpc.BriarMedia.FrameStartFieldNumber = 5 [static]
```

Field number for the "frame\_start" field.

#### 7.12.4.10 HeightFieldNumber

```
const int briar.BriarGrpc.BriarMedia.HeightFieldNumber = 2 [static]
```

Field number for the "height" field.

#### 7.12.4.11 IsCroppedFieldNumber

```
const int briar.BriarGrpc.BriarMedia.IsCroppedFieldNumber = 18 [static]
```

Field number for the "isCropped" field.

#### 7.12.4.12 MetadataFieldNumber

```
const int briar.BriarGrpc.BriarMedia.MetadataFieldNumber = 19 [static]
```

Field number for the "metadata" field.

#### 7.12.4.13 SegmentIdFieldNumber

```
const int briar.BriarGrpc.BriarMedia.SegmentIdFieldNumber = 8 [static]
```

Field number for the "segment\_id" field.

#### 7.12.4.14 SegmentTotalFieldNumber

```
const int briar.BriarGrpc.BriarMedia.SegmentTotalFieldNumber = 9 [static]
```

Field number for the "segment\_total" field.

#### 7.12.4.15 ServersideSourceFieldNumber

```
const int briar.BriarGrpc.BriarMedia.ServersideSourceFieldNumber = 15 [static]
```

Field number for the "serverside\_source" field.

#### 7.12.4.16 SourceFieldNumber

```
const int briar.BriarGrpc.BriarMedia.SourceFieldNumber = 14 [static]
```

Field number for the "source" field.

#### 7.12.4.17 SourceTypeFieldNumber

```
const int briar.BriarGrpc.BriarMedia.SourceTypeFieldNumber = 12 [static]
```

Field number for the "source\_type" field.

#### 7.12.4.18 TypeFieldNumber

```
const int briar.BriarGrpc.BriarMedia.TypeFieldNumber = 11 [static]
```

Field number for the "type" field.

#### 7.12.4.19 WidthFieldNumber

```
const int briar.BriarGrpc.BriarMedia.WidthFieldNumber = 1 [static]
```

Field number for the "width" field.

### 7.12.5 Property Documentation

#### 7.12.5.1 Channels

```
int briar.BriarGrpc.BriarMedia.Channels [get], [set]
```

Number of color layers

#### 7.12.5.2 Data

```
pb.ByteString briar.BriarGrpc.BriarMedia.Data [get], [set]
```

Array of bytes containing media data.

If raw color data it should be in RGB/RGBA order.

### 7.12.5.3 Datetime

```
string briar.BriarGrpc.BriarMedia.Datetime [get], [set]
```

Optional: timestamp for tracking purposes

### 7.12.5.4 Description

```
string briar.BriarGrpc.BriarMedia.Description [get], [set]
```

Human friendly String to document image

### 7.12.5.5 Descriptor

```
pbr.MessageDescriptor briar.BriarGrpc.BriarMedia.Descriptor [static], [get]
```

### 7.12.5.6 FrameCount

```
int briar.BriarGrpc.BriarMedia.FrameCount [get], [set]
```

Number of frames in this media message

### 7.12.5.7 FrameEnd

```
int briar.BriarGrpc.BriarMedia.FrameEnd [get], [set]
```

End frame of media

### 7.12.5.8 FrameNumber

```
int briar.BriarGrpc.BriarMedia.FrameNumber [get], [set]
```

If this is a single frame of a video, this denotes the frame number

### 7.12.5.9 FrameRate

```
float briar.BriarGrpc.BriarMedia.FrameRate [get], [set]
```

Framerate in frames/second

### 7.12.5.10 FrameStart

```
int briar.BriarGrpc.BriarMedia.FrameStart [get], [set]
```

Start frame of media

### 7.12.5.11 Height

```
int briar.BriarGrpc.BriarMedia.Height [get], [set]
```

Height of img in px

### 7.12.5.12 IsCropped

```
bool briar.BriarGrpc.BriarMedia.IsCropped [get], [set]
```

Optional: A boolean to specify if the given media file is pre-cropped or full

### 7.12.5.13 Metadata

```
pb.RepeatedField<global.briar.BriarGrpc.MediaMetadata> briar.BriarGrpc.BriarMedia.Metadata  
[get]
```

Optional metadata for the entire media stream;

### 7.12.5.14 Parser

```
pb.MessageParser<BriarMedia> briar.BriarGrpc.BriarMedia.Parser [static], [get]
```

#### 7.12.5.15 SegmentId

```
int briar.BriarGrpc.BriarMedia.SegmentId [get], [set]
```

A number identifying the segment in a stream of media

#### 7.12.5.16 SegmentTotal

```
int briar.BriarGrpc.BriarMedia.SegmentTotal [get], [set]
```

A number specifying the total number of segments to expect.

A value of -1 indicates a continuous stream with an unknown end.

#### 7.12.5.17 ServersideSource

```
string briar.BriarGrpc.BriarMedia.ServersideSource [get], [set]
```

A string describing the media location if it presides on the server side (i.e. in a location that the performer's algorithm can access directly)

#### 7.12.5.18 Source

```
string briar.BriarGrpc.BriarMedia.Source [get], [set]
```

A string describing the source of the media (url,filepath,etc.)

#### 7.12.5.19 SourceType

```
global.briar.BriarGrpc.BriarMedia.Types.DataType briar.BriarGrpc.BriarMedia.SourceType [get], [set]
```

Data type of the source of the media (e.g.

if this is a frame of a video)

#### 7.12.5.20 Type

```
global.briar.BriarGrpc.BriarMedia.Types.DataType briar.BriarGrpc.BriarMedia.Type [get], [set]
```

Data type of the media data

### 7.12.5.21 Width

```
int briar.BriarGrpc.BriarMedia.Width [get], [set]
```

Width of img in px

## 7.16 briar.BriarGrpc.BRIARService.BRIARServiceBase Class Reference

Base class for server-side implementations of BRIARService

### Public Member Functions

- virtual `global::System.Threading.Tasks.Task< global::briar.BriarGrpc.DatabaseCheckpointReply >` [database\\_checkpoint](#) (`global::briar.BriarGrpc.DatabaseCheckpointRequest request`, `grpc::ServerCallContext context`)  
*OPTIONAL will save a database's progress without finalizing*
- virtual `global::System.Threading.Tasks.Task< global::briar.BriarGrpc.DatabaseCheckpointReply >` [database\\_checkpoint\\_subject](#) (`global::briar.BriarGrpc.DatabaseCheckpointSubjectRequest request`, `grpc::ServerCallContext context`)  
*OPTIONAL will signal to your algorithm that the media for a specific subject is finished, and possible finalization can be run.*
- virtual `global::System.Threading.Tasks.Task` [database\\_compute\\_search](#) (`global::briar.BriarGrpc.SearchDatabaseRequest request`, `grpc::IServerStreamWriter< global::briar.BriarGrpc.SearchDatabaseReply >` `responseStream`, `grpc::ServerCallContext context`)  
*REQUIRED FOR PHASE 1 EVALUATION Given two database names compute a set of search results of size Probe X Database X Search Rank.*
- virtual `global::System.Threading.Tasks.Task< global::briar.BriarGrpc.VerifyDatabaseReply >` [database\\_compute\\_verify](#) (`global::briar.BriarGrpc.VerifyDatabaseRequest request`, `grpc::ServerCallContext context`)  
*REQUIRED FOR PHASE 1 EVALUATION Given two database names compute a score matrix of size databaseA X databaseB.*
- virtual `global::System.Threading.Tasks.Task< global::briar.BriarGrpc.DatabaseCreateReply >` [database\\_create](#) (`global::briar.BriarGrpc.DatabaseCreateRequest request`, `grpc::ServerCallContext context`)  
*REQUIRED Create and initialize a database on the server.*
- virtual `global::System.Threading.Tasks.Task< global::briar.BriarGrpc.DatabaseDeleteReply >` [database\\_delete](#) (`global::briar.BriarGrpc.DatabaseDeleteRequest request`, `grpc::ServerCallContext context`)  
*REQUIRED Delete a database on the server.*
- virtual `global::System.Threading.Tasks.Task< global::briar.BriarGrpc.DatabaseFinalizeReply >` [database\\_finalize](#) (`global::briar.BriarGrpc.DatabaseFinalizeRequest request`, `grpc::ServerCallContext context`)

*REQUIRED Called after all individuals have been enrolled.*

- virtual global::System.Threading.Tasks.Task [database\\_has\\_entries](#) (grpc::IAsyncStreamReader< global::briar.BriarGrpc.DatabaseHasEntryRequest > requestStream, grpc::IStreamWriter< global::briar.BriarGrpc.DatabaseHasEntryReply > responseStream, grpc::ServerCallContext context)
- virtual global::System.Threading.Tasks.Task< global::briar.BriarGrpc.DatabaseHasEntryReply > [database\\_has\\_entry](#) (global::briar.BriarGrpc.DatabaseHasEntryRequest request, grpc::ServerCallContext context)
- virtual global::System.Threading.Tasks.Task< global::briar.BriarGrpc.DatabaseInfoReply > [database\\_info](#) (global::briar.BriarGrpc.DatabaseInfoRequest request, grpc::ServerCallContext context)

*REQUIRED FOR PHASE 1 EVALUATION Return the associated summary information of a specific database.*

- virtual global::System.Threading.Tasks.Task< global::briar.BriarGrpc.DatabaseInsertReply > [database\\_insert](#) (global::briar.BriarGrpc.DatabaseInsertRequest request, grpc::ServerCallContext context)

*OPTIONAL Clients can insert templates directly into a database for database management purposes.*

- virtual global::System.Threading.Tasks.Task< global::briar.BriarGrpc.DatabaseListReply > [database\\_list](#) (global::briar.BriarGrpc.DatabaseListRequest request, grpc::ServerCallContext context)

*REQUIRED FOR PHASE 1 EVALUATION List the names of the galleries on this service.*

- virtual global::System.Threading.Tasks.Task< global::briar.BriarGrpc.DatabaseListEntriesReply > [database\\_list\\_entries](#) (global::briar.BriarGrpc.DatabaseListEntriesRequest request, grpc::ServerCallContext context)

*REQUIRED FOR PHASE 1 EVALUATION List the enrollments and associated metadata in the database.*

- virtual global::System.Threading.Tasks.Task< global::briar.BriarGrpc.DatabaseLoadReply > [database\\_load](#) (global::briar.BriarGrpc.DatabaseLoadRequest request, grpc::ServerCallContext context)

*REQUIRED Load database by name onto the server running the service.*

- virtual global::System.Threading.Tasks.Task< global::briar.BriarGrpc.DatabaseMergeReply > [database\\_merge](#) (global::briar.BriarGrpc.DatabaseMergeRequest request, grpc::ServerCallContext context)

*REQUIRED FOR PHASE 1 EVALUATION Merge a set of databases into a single database.*

- virtual global::System.Threading.Tasks.Task [database\\_move\\_entries](#) (grpc::IAsyncStreamReader< global::briar.BriarGrpc.DatabaseMoveEntryRequest > requestStream, grpc::IStreamWriter< global::briar.BriarGrpc.DatabaseMoveEntryReply > responseStream, grpc::ServerCallContext context)
- virtual global::System.Threading.Tasks.Task< global::briar.BriarGrpc.DatabaseMoveEntryReply > [database\\_move\\_entry](#) (global::briar.BriarGrpc.DatabaseMoveEntryRequest request, grpc::ServerCallContext context)
- virtual global::System.Threading.Tasks.Task< global::briar.BriarGrpc.Empty > [database\\_refresh](#) (global::briar.BriarGrpc.Empty request, grpc::ServerCallContext context)

*REQUIRED explicit call to refresh the database list within the service, in case new databases were created by a parallel service that this one does not see*

- virtual global::System.Threading.Tasks.Task< global::briar.BriarGrpc.DatabaseRemoveTmplsReply > [database\\_remove\\_templates](#) (global::briar.BriarGrpc.DatabaseRemoveTmplsRequest request, grpc::ServerCallContext context)

*REQUIRED Templates and associated records are deleted from a database.*

- virtual global::System.Threading.Tasks.Task< global::briar.BriarGrpc.DatabaseRenameReply > [database\\_rename](#) (global::briar.BriarGrpc.DatabaseRenameRequest request, grpc::ServerCallContext context)

*REQUIRED Rename a database on the server.*

- virtual global::System.Threading.Tasks.Task [database\\_retrieve](#) (grpc::IAsyncStreamReader< global::briar.BriarGrpc.DatabaseRetrieveRequest > requestStream, grpc::IStreamWriter< global::briar.BriarGrpc.DatabaseRetrieveReply > responseStream, grpc::ServerCallContext context)

*OPTIONAL Clients can retrieve templates with metadata from a database for client side storage, processing, backup, or for database management.*

- virtual global::System.Threading.Tasks.Task [detect](#) (grpc::IAsyncStreamReader< global::briar.BriarGrpc.DetectRequest > requestStream, grpc::IStreamWriter< global::briar.BriarGrpc.DetectReply > responseStream, grpc::ServerCallContext context)

*REQUIRED Run detection on a media.*

- virtual global::System.Threading.Tasks.Task [enhance](#) (grpc::IAsyncStreamReader< global::briar.BriarGrpc.EnhanceRequest > requestStream, grpc::IStreamWriter< global::briar.BriarGrpc.EnhanceReply > responseStream, grpc::ServerCallContext context)

*OPTIONAL Enhance a media stream.*

- virtual global::System.Threading.Tasks.Task [enroll](#) (grpc::IAsyncStreamReader< global::briar.BriarGrpc.EnrollRequest > requestStream, grpc::IStreamWriter< global::briar.BriarGrpc.EnrollReply > responseStream, grpc::ServerCallContext context)  
*REQUIRED FOR PHASE 1 EVALUATION Detect and extracts templates from media and enrolls the results in a database*
- virtual global::System.Threading.Tasks.Task [enroll\\_subject](#) (grpc::IAsyncStreamReader< global::briar.BriarGrpc.EnrollRequest > requestStream, grpc::IStreamWriter< global::briar.BriarGrpc.EnrollReply > responseStream, grpc::ServerCallContext context)  
*DEPRECATED for use only with legacy systems*
- virtual global::System.Threading.Tasks.Task [extract](#) (grpc::IAsyncStreamReader< global::briar.BriarGrpc.ExtractRequest > requestStream, grpc::IStreamWriter< global::briar.BriarGrpc.ExtractReply > responseStream, grpc::ServerCallContext context)  
*REQUIRED Run feature extraction on the provided detection.*
- virtual global::System.Threading.Tasks.Task< global::briar.BriarGrpc.BriarServiceConfigurationReply > [get\\_service\\_configuration](#) (global::briar.BriarGrpc.BriarServiceConfigurationRequest request, grpc::ServerCallContext context)
- virtual global::System.Threading.Tasks.Task [search](#) (grpc::IAsyncStreamReader< global::briar.BriarGrpc.SearchRequest > requestStream, grpc::IStreamWriter< global::briar.BriarGrpc.SearchReply > responseStream, grpc::ServerCallContext context)  
*REQUIRED Use provided template ids to search a database for that person.*
- virtual global::System.Threading.Tasks.Task [sigset\\_enroll\\_custom](#) (global::briar.BriarGrpc.EnrollCustomRequest request, grpc::IStreamWriter< global::briar.BriarGrpc.EnrollReply > responseStream, grpc::ServerCallContext context)  
*OPTIONAL FOR PHASE 1 EVALUATION, NOT FOR GENERAL PURPOSE USE*
- virtual global::System.Threading.Tasks.Task< global::briar.BriarGrpc.StatusReply > [status](#) (global::briar.BriarGrpc.StatusRequest request, grpc::ServerCallContext context)  
*REQUIRED Check service status.*
- virtual global::System.Threading.Tasks.Task [track](#) (grpc::IAsyncStreamReader< global::briar.BriarGrpc.TrackRequest > requestStream, grpc::IStreamWriter< global::briar.BriarGrpc.TrackReply > responseStream, grpc::ServerCallContext context)  
*OPTIONAL To run tracking on video media.*
- virtual global::System.Threading.Tasks.Task< global::briar.BriarGrpc.VerifyReply > [verify](#) (grpc::IAsyncStreamReader< global::briar.BriarGrpc.VerifyRequest > requestStream, grpc::ServerCallContext context)  
*REQUIRED Compare two template ids and verify if they are the same person.*

### 7.16.1 Detailed Description

Base class for server-side implementations of BRIARService

### 7.16.2 Member Function Documentation

#### 7.16.2.1 database\_checkpoint()

```
virtual global::System.Threading.Tasks.Task<global::briar.BriarGrpc.DatabaseCheckpointReply>
briar.BriarGrpc.BRIARService.BRIARServiceBase.database_checkpoint (
    global::briar.BriarGrpc.DatabaseCheckpointRequest request,
    grpc::ServerCallContext context ) [inline], [virtual]
```

OPTIONAL will save a database's progress without finalizing

## Parameters

<i>request</i>	The request received from the client.
<i>context</i>	The context of the server-side call handler being invoked.

## Returns

The response to send back to the client (wrapped by a task).

## 7.16.2.2 database\_checkpoint\_subject()

```
virtual global.System.Threading.Tasks.Task<global.briar.BriarGrpc.DatabaseCheckpointReply>
briar.BriarGrpc.BRIARService.BRIARServiceBase.database_checkpoint_subject (
    global::briar.BriarGrpc.DatabaseCheckpointSubjectRequest request,
    grpc::ServerCallContext context ) [inline], [virtual]
```

OPTIONAL will signal to your algorithm that the media for a specific subject is finished, and possible finalization can be run.

## Parameters

<i>request</i>	The request received from the client.
<i>context</i>	The context of the server-side call handler being invoked.

## Returns

The response to send back to the client (wrapped by a task).

## 7.16.2.3 database\_compute\_search()

```
virtual global.System.Threading.Tasks.Task briar.BriarGrpc.BRIARService.BRIARServiceBase.↵
database_compute_search (
    global::briar.BriarGrpc.SearchDatabaseRequest request,
    grpc::IServerStreamWriter< global::briar.BriarGrpc.SearchDatabaseReply > response↵
    Stream,
    grpc::ServerCallContext context ) [inline], [virtual]
```

REQUIRED FOR PHASE 1 EVALUATION Given two database names compute a set of search results of size ProbeDatabase X Search Rank.

The matrix may be used for testing, analysis, client side clustering, etc. This may needed to be implemented to support evaluations in the future.

## Parameters

<i>request</i>	The request received from the client.
<i>responseStream</i>	Used for sending responses back to the client.
<i>context</i>	The context of the server-side call handler being invoked.

**Returns**

A task indicating completion of the handler.

**7.16.2.4 database\_compute\_verify()**

```
virtual global::System.Threading.Tasks.Task<global::briar.BriarGrpc.VerifyDatabaseReply> briar.↵
BriarGrpc.BRIARService.BRIARServiceBase.database_compute_verify (
    global::briar.BriarGrpc.VerifyDatabaseRequest request,
    grpc::ServerCallContext context ) [inline], [virtual]
```

REQUIRED FOR PHASE 1 EVALUATION Given two database names compute a score matrix of size databaseA X databaseB.

The matrix may be used for testing, analysis, client side clustering, etc. This may needed to be implemented to support evaluations in the future.

**Parameters**

<i>request</i>	The request received from the client.
<i>context</i>	The context of the server-side call handler being invoked.

**Returns**

The response to send back to the client (wrapped by a task).

**7.16.2.5 database\_create()**

```
virtual global::System.Threading.Tasks.Task<global::briar.BriarGrpc.DatabaseCreateReply> briar.↵
BriarGrpc.BRIARService.BRIARServiceBase.database_create (
    global::briar.BriarGrpc.DatabaseCreateRequest request,
    grpc::ServerCallContext context ) [inline], [virtual]
```

REQUIRED Create and initialize a database on the server.

This should prepare the database to receive enrollment requests.

**Parameters**

<i>request</i>	The request received from the client.
<i>context</i>	The context of the server-side call handler being invoked.

**Returns**

The response to send back to the client (wrapped by a task).

### 7.16.2.6 database\_delete()

```
virtual global.System.Threading.Tasks.Task<global.briar.BriarGrpc.DatabaseDeleteReply> briar.↵  
BriarGrpc.BRIARService.BRIARServiceBase.database_delete (   
    global::briar.BriarGrpc.DatabaseDeleteRequest request,   
    grpc::ServerCallContext context ) [inline], [virtual]
```

REQUIRED Delete a database on the server.

This should remove the database and remove associated storage.

#### Parameters

<i>request</i>	The request received from the client.
<i>context</i>	The context of the server-side call handler being invoked.

#### Returns

The response to send back to the client (wrapped by a task).

### 7.16.2.7 database\_finalize()

```
virtual global.System.Threading.Tasks.Task<global.briar.BriarGrpc.DatabaseFinalizeReply>   
briar.BriarGrpc.BRIARService.BRIARServiceBase.database_finalize (   
    global::briar.BriarGrpc.DatabaseFinalizeRequest request,   
    grpc::ServerCallContext context ) [inline], [virtual]
```

REQUIRED Called after all individuals have been enrolled.

Conduct any analysis of the database entries as needed or optimize for fast verification or search.

#### Parameters

<i>request</i>	The request received from the client.
<i>context</i>	The context of the server-side call handler being invoked.

#### Returns

The response to send back to the client (wrapped by a task).

### 7.16.2.8 database\_has\_entries()

```
virtual global.System.Threading.Tasks.Task briar.BriarGrpc.BRIARService.BRIARServiceBase.↵  
database_has_entries (
```

```

        grpc::IAsyncStreamReader< global::briar.BriarGrpc.DatabaseHasEntryRequest > request↔
Stream,
        grpc::IServerStreamWriter< global::briar.BriarGrpc.DatabaseHasEntryReply > response↔
Stream,
        grpc::ServerCallContext context ) [inline], [virtual]

```

#### 7.16.2.9 database\_has\_entry()

```

virtual global::System.Threading.Tasks.Task<global.briar.BriarGrpc.DatabaseHasEntryReply>
briar.BriarGrpc.BRIARService.BRIARServiceBase.database_has_entry (
    global::briar.BriarGrpc.DatabaseHasEntryRequest request,
    grpc::ServerCallContext context ) [inline], [virtual]

```

#### 7.16.2.10 database\_info()

```

virtual global::System.Threading.Tasks.Task<global.briar.BriarGrpc.DatabaseInfoReply> briar.↔
BriarGrpc.BRIARService.BRIARServiceBase.database_info (
    global::briar.BriarGrpc.DatabaseInfoRequest request,
    grpc::ServerCallContext context ) [inline], [virtual]

```

REQUIRED FOR PHASE 1 EVALUATION Return the associated summary information of a specific database.

##### Parameters

<i>request</i>	The request received from the client.
<i>context</i>	The context of the server-side call handler being invoked.

##### Returns

The response to send back to the client (wrapped by a task).

#### 7.16.2.11 database\_insert()

```

virtual global::System.Threading.Tasks.Task<global.briar.BriarGrpc.DatabaseInsertReply> briar.↔
BriarGrpc.BRIARService.BRIARServiceBase.database_insert (
    global::briar.BriarGrpc.DatabaseInsertRequest request,
    grpc::ServerCallContext context ) [inline], [virtual]

```

OPTIONAL Clients can insert templates directly into a database for database management purposes.

##### Parameters

<i>request</i>	The request received from the client.
<i>context</i>	The context of the server-side call handler being invoked.

**Returns**

The response to send back to the client (wrapped by a task).

**7.16.2.12 database\_list()**

```
virtual global.System.Threading.Tasks.Task<global.briar.BriarGrpc.DatabaseListReply> briar.↔  
BriarGrpc.BRIARService.BRIARServiceBase.database_list (  
    global::briar.BriarGrpc.DatabaseListRequest request,  
    grpc::ServerCallContext context ) [inline], [virtual]
```

REQUIRED FOR PHASE 1 EVALUATION List the names of the galleries on this service.

**Parameters**

<i>request</i>	The request received from the client.
<i>context</i>	The context of the server-side call handler being invoked.

**Returns**

The response to send back to the client (wrapped by a task).

**7.16.2.13 database\_list\_entries()**

```
virtual global.System.Threading.Tasks.Task<global.briar.BriarGrpc.DatabaseListentriesReply>  
briar.BriarGrpc.BRIARService.BRIARServiceBase.database_list_entries (  
    global::briar.BriarGrpc.DatabaseListEntriesRequest request,  
    grpc::ServerCallContext context ) [inline], [virtual]
```

REQUIRED FOR PHASE 1 EVALUATION List the enrollments and associated metadata in the database.

**Parameters**

<i>request</i>	The request received from the client.
<i>context</i>	The context of the server-side call handler being invoked.

**Returns**

The response to send back to the client (wrapped by a task).

**7.16.2.14 database\_load()**

```
virtual global.System.Threading.Tasks.Task<global.briar.BriarGrpc.DatabaseLoadReply> briar.↔  
BriarGrpc.BRIARService.BRIARServiceBase.database_load (  

```

```
global::briar.BriarGrpc.DatabaseLoadRequest request,
grpc::ServerCallContext context ) [inline], [virtual]
```

REQUIRED Load database by name onto the server running the service.

#### Parameters

<i>request</i>	The request received from the client.
<i>context</i>	The context of the server-side call handler being invoked.

#### Returns

The response to send back to the client (wrapped by a task).

### 7.16.2.15 database\_merge()

```
virtual global.System.Threading.Tasks.Task<global.briar.BriarGrpc.DatabaseMergeReply> briar.↵
BriarGrpc.BRIARService.BRIARServiceBase.database_merge (
    global::briar.BriarGrpc.DatabaseMergeRequest request,
    grpc::ServerCallContext context ) [inline], [virtual]
```

REQUIRED FOR PHASE 1 EVALUATION Merge a set of databases into a single database.

#### Parameters

<i>request</i>	The request received from the client.
<i>context</i>	The context of the server-side call handler being invoked.

#### Returns

The response to send back to the client (wrapped by a task).

### 7.16.2.16 database\_move\_entries()

```
virtual global.System.Threading.Tasks.Task briar.BriarGrpc.BRIARService.BRIARServiceBase.↵
database_move_entries (
    grpc::IAsyncStreamReader< global::briar.BriarGrpc.DatabaseMoveEntryRequest >
requestStream,
    grpc::IServerStreamWriter< global::briar.BriarGrpc.DatabaseMoveEntryReply > response↵
Stream,
    grpc::ServerCallContext context ) [inline], [virtual]
```

### 7.16.2.17 database\_move\_entry()

```
virtual global.System.Threading.Tasks.Task<global.briar.BriarGrpc.DatabaseMoveEntryReply>  
briar.BriarGrpc.BRIARService.BRIARServiceBase.database_move_entry (   
    global::briar.BriarGrpc.DatabaseMoveEntryRequest request,  
    grpc::ServerCallContext context ) [inline], [virtual]
```

### 7.16.2.18 database\_refresh()

```
virtual global.System.Threading.Tasks.Task<global.briar.BriarGrpc.Empty> briar.BriarGrpc.BRIARService.BRIARServiceBase.database_refresh (   
    global::briar.BriarGrpc.Empty request,  
    grpc::ServerCallContext context ) [inline], [virtual]
```

REQUIRED explicit call to refresh the database list within the service, in case new databases were created by a parallel service that this one does not see

#### Parameters

<i>request</i>	The request received from the client.
<i>context</i>	The context of the server-side call handler being invoked.

#### Returns

The response to send back to the client (wrapped by a task).

### 7.16.2.19 database\_remove\_templates()

```
virtual global.System.Threading.Tasks.Task<global.briar.BriarGrpc.DatabaseRemoveTplrsReply>  
briar.BriarGrpc.BRIARService.BRIARServiceBase.database_remove_templates (   
    global::briar.BriarGrpc.DatabaseRemoveTplrsRequest request,  
    grpc::ServerCallContext context ) [inline], [virtual]
```

REQUIRED Templates and associated records are deleted from a database.

#### Parameters

<i>request</i>	The request received from the client.
<i>context</i>	The context of the server-side call handler being invoked.

#### Returns

The response to send back to the client (wrapped by a task).

### 7.16.2.20 database\_rename()

```
virtual global.System.Threading.Tasks.Task<global.briar.BriarGrpc.DatabaseRenameReply> briar.↵
BriarGrpc.BRIARService.BRIARServiceBase.database_rename (
    global::briar.BriarGrpc.DatabaseRenameRequest request,
    grpc::ServerCallContext context ) [inline], [virtual]
```

REQUIRED Rename a database on the server.

This should rename the database.

#### Parameters

<i>request</i>	The request received from the client.
<i>context</i>	The context of the server-side call handler being invoked.

#### Returns

The response to send back to the client (wrapped by a task).

### 7.16.2.21 database\_retrieve()

```
virtual global.System.Threading.Tasks.Task briar.BriarGrpc.BRIARService.BRIARServiceBase.↵
database_retrieve (
    grpc::IAsyncStreamReader< global::briar.BriarGrpc.DatabaseRetrieveRequest > request↵
Stream,
    grpc::IServerStreamWriter< global::briar.BriarGrpc.DatabaseRetrieveReply > response↵
Stream,
    grpc::ServerCallContext context ) [inline], [virtual]
```

OPTIONAL Clients can retrieve templates with metadata from a database for client side storage, processing, backup, or for database management.

#### Parameters

<i>requestStream</i>	Used for reading requests from the client.
<i>responseStream</i>	Used for sending responses back to the client.
<i>context</i>	The context of the server-side call handler being invoked.

#### Returns

A task indicating completion of the handler.

### 7.16.2.22 detect()

```
virtual global.System.Threading.Tasks.Task briar.BriarGrpc.BRIARService.BRIARServiceBase.↵
detect (
```

```
grpc::IAsyncStreamReader< global::briar.BriarGrpc.DetectRequest > requestStream,
grpc::IServerStreamWriter< global::briar.BriarGrpc.DetectReply > responseStream,
grpc::ServerCallContext context ) [inline], [virtual]
```

REQUIRED Run detection on a media.

Optionally this can also run attribute classification and template extraction. Implementation should be similar to enroll but with nothing stored in a database.

#### Parameters

<i>requestStream</i>	Used for reading requests from the client.
<i>responseStream</i>	Used for sending responses back to the client.
<i>context</i>	The context of the server-side call handler being invoked.

#### Returns

A task indicating completion of the handler.

#### 7.16.2.23 enhance()

```
virtual global::System.Threading.Tasks.Task briar.BriarGrpc.BRIARService.BRIARServiceBase.↵
enhance (
    grpc::IAsyncStreamReader< global::briar.BriarGrpc.EnhanceRequest > requestStream,
    grpc::IServerStreamWriter< global::briar.BriarGrpc.EnhanceReply > responseStream,
    grpc::ServerCallContext context ) [inline], [virtual]
```

OPTIONAL Enhance a media stream.

This takes a media stream as an input and return a media stream of enhanced video.

#### Parameters

<i>requestStream</i>	Used for reading requests from the client.
<i>responseStream</i>	Used for sending responses back to the client.
<i>context</i>	The context of the server-side call handler being invoked.

#### Returns

A task indicating completion of the handler.

#### 7.16.2.24 enroll()

```
virtual global::System.Threading.Tasks.Task briar.BriarGrpc.BRIARService.BRIARServiceBase.↵
enroll (
```

```

grpc::IAsyncStreamReader< global::briar.BriarGrpc.EnrollRequest > requestStream,
grpc::IServerStreamWriter< global::briar.BriarGrpc.EnrollReply > responseStream,
grpc::ServerCallContext context ) [inline], [virtual]

```

REQUIRED FOR PHASE 1 EVALUATION Detect and extracts templates from media and enrolls the results in a database

#### Parameters

<i>requestStream</i>	Used for reading requests from the client.
<i>responseStream</i>	Used for sending responses back to the client.
<i>context</i>	The context of the server-side call handler being invoked.

#### Returns

A task indicating completion of the handler.

#### 7.16.2.25 enroll\_subject()

```

virtual global.System.Threading.Tasks.Task briar.BriarGrpc.BRIARService.BRIARServiceBase.↔
enroll_subject (
    grpc::IAsyncStreamReader< global::briar.BriarGrpc.EnrollRequest > requestStream,
    grpc::IServerStreamWriter< global::briar.BriarGrpc.EnrollReply > responseStream,
    grpc::ServerCallContext context ) [inline], [virtual]

```

DEPRECATED for use only with legacy systems

#### Parameters

<i>requestStream</i>	Used for reading requests from the client.
<i>responseStream</i>	Used for sending responses back to the client.
<i>context</i>	The context of the server-side call handler being invoked.

#### Returns

A task indicating completion of the handler.

#### 7.16.2.26 extract()

```

virtual global.System.Threading.Tasks.Task briar.BriarGrpc.BRIARService.BRIARServiceBase.↔
extract (
    grpc::IAsyncStreamReader< global::briar.BriarGrpc.ExtractRequest > requestStream,
    grpc::IServerStreamWriter< global::briar.BriarGrpc.ExtractReply > responseStream,
    grpc::ServerCallContext context ) [inline], [virtual]

```

REQUIRED Run feature extraction on the provided detection.

## Parameters

<i>requestStream</i>	Used for reading requests from the client.
<i>responseStream</i>	Used for sending responses back to the client.
<i>context</i>	The context of the server-side call handler being invoked.

## Returns

A task indicating completion of the handler.

**7.16.2.27 get\_service\_configuration()**

```
virtual global.System.Threading.Tasks.Task<global.briar.BriarGrpc.BriarServiceConfiguration↔  
Reply> briar.BriarGrpc.BRIARService.BRIARServiceBase.get_service_configuration (   
    global::briar.BriarGrpc.BriarServiceConfigurationRequest request,   
    grpc::ServerCallContext context ) [inline], [virtual]
```

**7.16.2.28 search()**

```
virtual global.System.Threading.Tasks.Task briar.BriarGrpc.BRIARService.BRIARServiceBase.↔  
search (   
    grpc::IAsyncStreamReader< global::briar.BriarGrpc.SearchRequest > requestStream,   
    grpc::IServerStreamWriter< global::briar.BriarGrpc.SearchReply > responseStream,   
    grpc::ServerCallContext context ) [inline], [virtual]
```

REQUIRED Use provided template ids to search a database for that person.

Return a rank ordered list of results with scores.

## Parameters

<i>requestStream</i>	Used for reading requests from the client.
<i>responseStream</i>	Used for sending responses back to the client.
<i>context</i>	The context of the server-side call handler being invoked.

## Returns

A task indicating completion of the handler.

**7.16.2.29 sigset\_enroll\_custom()**

```
virtual global.System.Threading.Tasks.Task briar.BriarGrpc.BRIARService.BRIARServiceBase.↔  
sigset_enroll_custom (
```

```
global::briar.BriarGrpc.EnrollCustomRequest request,
grpc::IServerStreamWriter< global::briar.BriarGrpc.EnrollReply > responseStream,
grpc::ServerCallContext context ) [inline], [virtual]
```

OPTIONAL FOR PHASE 1 EVALUATION, NOT FOR GENERAL PURPOSE USE

#### Parameters

<i>request</i>	The request received from the client.
<i>responseStream</i>	Used for sending responses back to the client.
<i>context</i>	The context of the server-side call handler being invoked.

#### Returns

A task indicating completion of the handler.

### 7.16.2.30 status()

```
virtual global.System.Threading.Tasks.Task<global.briar.BriarGrpc.StatusReply> briar.BriarGrpc.BRIARService.BRIARServiceBase.status (
    global::briar.BriarGrpc.StatusRequest request,
    grpc::ServerCallContext context ) [inline], [virtual]
```

REQUIRED Check service status.

After connecting clients should typically call this function to insure that the service is in the READY state.

#### Parameters

<i>request</i>	The request received from the client.
<i>context</i>	The context of the server-side call handler being invoked.

#### Returns

The response to send back to the client (wrapped by a task).

### 7.16.2.31 track()

```
virtual global.System.Threading.Tasks.Task briar.BriarGrpc.BRIARService.BRIARServiceBase.track (
    grpc::IAsyncStreamReader< global::briar.BriarGrpc.TrackRequest > requestStream,
    grpc::IServerStreamWriter< global::briar.BriarGrpc.TrackReply > responseStream,
    grpc::ServerCallContext context ) [inline], [virtual]
```

OPTIONAL To run tracking on video media.

## Parameters

<i>requestStream</i>	Used for reading requests from the client.
<i>responseStream</i>	Used for sending responses back to the client.
<i>context</i>	The context of the server-side call handler being invoked.

## Returns

A task indicating completion of the handler.

**7.16.2.32 verify()**

```
virtual global.System.Threading.Tasks.Task<global.briar.BriarGrpc.VerifyReply> briar.BriarGrpc.BRIARService.BRIARServiceBase.verify (
    grpc::IAsyncStreamReader< global::briar.BriarGrpc.VerifyRequest > requestStream,
    grpc::ServerCallContext context ) [inline], [virtual]
```

REQUIRED Compare two template ids and verify if they are the same person.

## Parameters

<i>requestStream</i>	Used for reading requests from the client.
<i>context</i>	The context of the server-side call handler being invoked.

## Returns

The response to send back to the client (wrapped by a task).

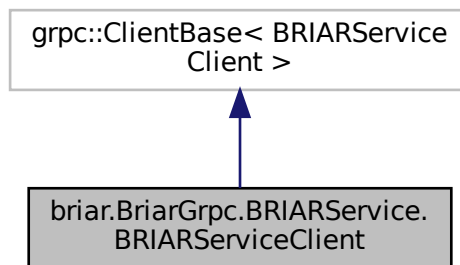

The documentation for this class was generated from the following file:

- /home/qdb/git/briar-api/lib/csharp/briar/briar\_grpc/[BriarServiceGrpc.cs](#)

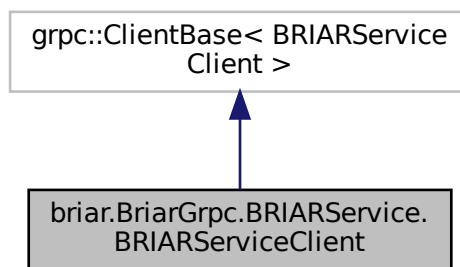

**7.17 briar.BriarGrpc.BRIARService.BRIARServiceClient Class Reference**

Client for BRIARService

Inheritance diagram for `briar.BriarGrpc.BRIARService.BRIARServiceClient`:

Collaboration diagram for `briar.BriarGrpc.BRIARService.BRIARServiceClient`:

## Public Member Functions

- [BRIARServiceClient](#) (`grpc::CallInvoker callInvoker`)  
Creates a new client for *BRIARService* that uses a custom *CallInvoker*.
- [BRIARServiceClient](#) (`grpc::ChannelBase channel`)  
Creates a new client for *BRIARService*
- virtual `global::briar.BriarGrpc.DatabaseCheckpointReply` [database\\_checkpoint](#) (`global::briar.BriarGrpc.DatabaseCheckpointRequest request`, `grpc::CallOptions options`)  
*OPTIONAL will save a database's progress without finalizing*
- virtual `global::briar.BriarGrpc.DatabaseCheckpointReply` [database\\_checkpoint](#) (`global::briar.BriarGrpc.DatabaseCheckpointRequest request`, `grpc::Metadata headers=null`, `global::System.DateTime? deadline=null`, `global::System.Threading.CancellationToken cancellationToken=default(global::System.Threading.CancellationToken)`)  
*OPTIONAL will save a database's progress without finalizing*
- virtual `global::briar.BriarGrpc.DatabaseCheckpointReply` [database\\_checkpoint\\_subject](#) (`global::briar.BriarGrpc.DatabaseCheckpointSubjectRequest request`, `grpc::CallOptions options`)

*OPTIONAL will signal to your algorithm that the media for a specific subject is finished, and possible finalization can be run.*

- virtual global::briar.BriarGrpc.DatabaseCheckpointReply [database\\_checkpoint\\_subject](#) (global::briar.BriarGrpc.DatabaseCheckpointSubjectRequest request, grpc::Metadata headers=null, global::System.DateTime? deadline=null, global::System.Threading.CancellationToken cancellationToken=default(global::System.Threading.CancellationToken))

*OPTIONAL will signal to your algorithm that the media for a specific subject is finished, and possible finalization can be run.*

- virtual grpc::AsyncUnaryCall< global::briar.BriarGrpc.DatabaseCheckpointReply > [database\\_checkpoint\\_subjectAsync](#) (global::briar.BriarGrpc.DatabaseCheckpointSubjectRequest request, grpc::CallOptions options)

*OPTIONAL will signal to your algorithm that the media for a specific subject is finished, and possible finalization can be run.*

- virtual grpc::AsyncUnaryCall< global::briar.BriarGrpc.DatabaseCheckpointReply > [database\\_checkpoint\\_subjectAsync](#) (global::briar.BriarGrpc.DatabaseCheckpointSubjectRequest request, grpc::Metadata headers=null, global::System.DateTime? deadline=null, global::System.Threading.CancellationToken cancellationToken=default(global::System.Threading.CancellationToken))

*OPTIONAL will signal to your algorithm that the media for a specific subject is finished, and possible finalization can be run.*

- virtual grpc::AsyncUnaryCall< global::briar.BriarGrpc.DatabaseCheckpointReply > [database\\_checkpointAsync](#) (global::briar.BriarGrpc.DatabaseCheckpointRequest request, grpc::CallOptions options)

*OPTIONAL will save a database's progress without finalizing*

- virtual grpc::AsyncUnaryCall< global::briar.BriarGrpc.DatabaseCheckpointReply > [database\\_checkpointAsync](#) (global::briar.BriarGrpc.DatabaseCheckpointRequest request, grpc::Metadata headers=null, global::System.DateTime? deadline=null, global::System.Threading.CancellationToken cancellationToken=default(global::System.Threading.CancellationToken))

*OPTIONAL will save a database's progress without finalizing*

- virtual grpc::AsyncServerStreamingCall< global::briar.BriarGrpc.SearchDatabaseReply > [database\\_compute\\_search](#) (global::briar.BriarGrpc.SearchDatabaseRequest request, grpc::CallOptions options)

*REQUIRED FOR PHASE 1 EVALUATION Given two database names compute a set of search results of size Probe X Database X Search Rank.*

- virtual grpc::AsyncServerStreamingCall< global::briar.BriarGrpc.SearchDatabaseReply > [database\\_compute\\_search](#) (global::briar.BriarGrpc.SearchDatabaseRequest request, grpc::Metadata headers=null, global::System.DateTime? deadline=null, global::System.Threading.CancellationToken cancellationToken=default(global::System.Threading.CancellationToken))

*REQUIRED FOR PHASE 1 EVALUATION Given two database names compute a set of search results of size Probe X Database X Search Rank.*

- virtual global::briar.BriarGrpc.VerifyDatabaseReply [database\\_compute\\_verify](#) (global::briar.BriarGrpc.VerifyDatabaseRequest request, grpc::CallOptions options)

*REQUIRED FOR PHASE 1 EVALUATION Given two database names compute a score matrix of size databaseA X databaseB.*

- virtual global::briar.BriarGrpc.VerifyDatabaseReply [database\\_compute\\_verify](#) (global::briar.BriarGrpc.VerifyDatabaseRequest request, grpc::Metadata headers=null, global::System.DateTime? deadline=null, global::System.Threading.CancellationToken cancellationToken=default(global::System.Threading.CancellationToken))

*REQUIRED FOR PHASE 1 EVALUATION Given two database names compute a score matrix of size databaseA X databaseB.*

- virtual grpc::AsyncUnaryCall< global::briar.BriarGrpc.VerifyDatabaseReply > [database\\_compute\\_verifyAsync](#) (global::briar.BriarGrpc.VerifyDatabaseRequest request, grpc::CallOptions options)

*REQUIRED FOR PHASE 1 EVALUATION Given two database names compute a score matrix of size databaseA X databaseB.*

- virtual grpc::AsyncUnaryCall< global::briar.BriarGrpc.VerifyDatabaseReply > [database\\_compute\\_verifyAsync](#) (global::briar.BriarGrpc.VerifyDatabaseRequest request, grpc::Metadata headers=null, global::System.DateTime? deadline=null, global::System.Threading.CancellationToken cancellationToken=default(global::System.Threading.CancellationToken))

*REQUIRED FOR PHASE 1 EVALUATION Given two database names compute a score matrix of size databaseA X databaseB.*

- virtual global::briar.BriarGrpc.DatabaseCreateReply [database\\_create](#) (global::briar.BriarGrpc.DatabaseCreateRequest request, grpc::CallOptions options)  
*REQUIRED Create and initialize a database on the server.*
- virtual global::briar.BriarGrpc.DatabaseCreateReply [database\\_create](#) (global::briar.BriarGrpc.DatabaseCreateRequest request, grpc::Metadata headers=null, global::System.DateTime? deadline=null, global::System.Threading.CancellationToken cancellationToken=default(global::System.Threading.CancellationToken))  
*REQUIRED Create and initialize a database on the server.*
- virtual grpc::AsyncUnaryCall< global::briar.BriarGrpc.DatabaseCreateReply > [database\\_createAsync](#) (global::briar.BriarGrpc.DatabaseCreateRequest request, grpc::CallOptions options)  
*REQUIRED Create and initialize a database on the server.*
- virtual grpc::AsyncUnaryCall< global::briar.BriarGrpc.DatabaseCreateReply > [database\\_createAsync](#) (global::briar.BriarGrpc.DatabaseCreateRequest request, grpc::Metadata headers=null, global::System.DateTime? deadline=null, global::System.Threading.CancellationToken cancellationToken=default(global::System.Threading.CancellationToken))  
*REQUIRED Create and initialize a database on the server.*
- virtual global::briar.BriarGrpc.DatabaseDeleteReply [database\\_delete](#) (global::briar.BriarGrpc.DatabaseDeleteRequest request, grpc::CallOptions options)  
*REQUIRED Delete a database on the server.*
- virtual global::briar.BriarGrpc.DatabaseDeleteReply [database\\_delete](#) (global::briar.BriarGrpc.DatabaseDeleteRequest request, grpc::Metadata headers=null, global::System.DateTime? deadline=null, global::System.Threading.CancellationToken cancellationToken=default(global::System.Threading.CancellationToken))  
*REQUIRED Delete a database on the server.*
- virtual grpc::AsyncUnaryCall< global::briar.BriarGrpc.DatabaseDeleteReply > [database\\_deleteAsync](#) (global::briar.BriarGrpc.DatabaseDeleteRequest request, grpc::CallOptions options)  
*REQUIRED Delete a database on the server.*
- virtual grpc::AsyncUnaryCall< global::briar.BriarGrpc.DatabaseDeleteReply > [database\\_deleteAsync](#) (global::briar.BriarGrpc.DatabaseDeleteRequest request, grpc::Metadata headers=null, global::System.DateTime? deadline=null, global::System.Threading.CancellationToken cancellationToken=default(global::System.Threading.CancellationToken))  
*REQUIRED Delete a database on the server.*
- virtual global::briar.BriarGrpc.DatabaseFinalizeReply [database\\_finalize](#) (global::briar.BriarGrpc.DatabaseFinalizeRequest request, grpc::CallOptions options)  
*REQUIRED Called after all individuals have been enrolled.*
- virtual global::briar.BriarGrpc.DatabaseFinalizeReply [database\\_finalize](#) (global::briar.BriarGrpc.DatabaseFinalizeRequest request, grpc::Metadata headers=null, global::System.DateTime? deadline=null, global::System.Threading.CancellationToken cancellationToken=default(global::System.Threading.CancellationToken))  
*REQUIRED Called after all individuals have been enrolled.*
- virtual grpc::AsyncUnaryCall< global::briar.BriarGrpc.DatabaseFinalizeReply > [database\\_finalizeAsync](#) (global::briar.BriarGrpc.DatabaseFinalizeRequest request, grpc::CallOptions options)

- virtual grpc::AsyncDuplexStreamingCall< global::briar.BriarGrpc.DetectRequest, global::briar.BriarGrpc.DetectReply > [detect](#) (grpc::Metadata headers=null, global::System.DateTime? deadline=null, global::System.Threading.CancellationToken cancellationToken=default(global::System.Threading.CancellationToken))  
*REQUIRED Run detection on a media.*
- virtual grpc::AsyncDuplexStreamingCall< global::briar.BriarGrpc.EnhanceRequest, global::briar.BriarGrpc.EnhanceReply > [enhance](#) (grpc::CallOptions options)  
*OPTIONAL Enhance a media stream.*
- virtual grpc::AsyncDuplexStreamingCall< global::briar.BriarGrpc.EnhanceRequest, global::briar.BriarGrpc.EnhanceReply > [enhance](#) (grpc::Metadata headers=null, global::System.DateTime? deadline=null, global::System.Threading.CancellationToken cancellationToken=default(global::System.Threading.CancellationToken))  
*OPTIONAL Enhance a media stream.*
- virtual grpc::AsyncDuplexStreamingCall< global::briar.BriarGrpc.EnrollRequest, global::briar.BriarGrpc.EnrollReply > [enroll](#) (grpc::CallOptions options)  
*REQUIRED FOR PHASE 1 EVALUATION Detect and extracts templates from media and enrolls the results in a database*
- virtual grpc::AsyncDuplexStreamingCall< global::briar.BriarGrpc.EnrollRequest, global::briar.BriarGrpc.EnrollReply > [enroll](#) (grpc::Metadata headers=null, global::System.DateTime? deadline=null, global::System.Threading.CancellationToken cancellationToken=default(global::System.Threading.CancellationToken))  
*REQUIRED FOR PHASE 1 EVALUATION Detect and extracts templates from media and enrolls the results in a database*
- virtual grpc::AsyncDuplexStreamingCall< global::briar.BriarGrpc.EnrollRequest, global::briar.BriarGrpc.EnrollReply > [enroll\\_subject](#) (grpc::CallOptions options)  
*DEPRECATED for use only with legacy systems*
- virtual grpc::AsyncDuplexStreamingCall< global::briar.BriarGrpc.EnrollRequest, global::briar.BriarGrpc.EnrollReply > [enroll\\_subject](#) (grpc::Metadata headers=null, global::System.DateTime? deadline=null, global::System.Threading.CancellationToken cancellationToken=default(global::System.Threading.CancellationToken))

*DEPRECATED for use only with legacy systems*

- virtual `grpc::AsyncDuplexStreamingCall< global::briar.BriarGrpc.ExtractRequest, global::briar.BriarGrpc.ExtractReply >` `extract` (`grpc::CallOptions options`)

*REQUIRED Run feature extraction on the provided detection.*

- virtual `grpc::AsyncDuplexStreamingCall< global::briar.BriarGrpc.ExtractRequest, global::briar.BriarGrpc.ExtractReply >` `extract` (`grpc::Metadata headers=null`, `global::System.DateTime? deadline=null`, `global::System.Threading.CancellationToken cancellationToken=default(global::System.Threading.CancellationToken)`)

*REQUIRED Run feature extraction on the provided detection.*

- virtual `global::briar.BriarGrpc.BriarServiceConfigurationReply` `get_service_configuration` (`global::briar.BriarGrpc.BriarServiceConfigurationRequest request`, `grpc::CallOptions options`)
- virtual `global::briar.BriarGrpc.BriarServiceConfigurationReply` `get_service_configuration` (`global::briar.BriarGrpc.BriarServiceConfigurationRequest request`, `grpc::Metadata headers=null`, `global::System.DateTime? deadline=null`, `global::System.Threading.CancellationToken cancellationToken=default(global::System.Threading.CancellationToken)`)
- virtual `grpc::AsyncUnaryCall< global::briar.BriarGrpc.BriarServiceConfigurationReply >` `get_service_configurationAsync` (`global::briar.BriarGrpc.BriarServiceConfigurationRequest request`, `grpc::CallOptions options`)
- virtual `grpc::AsyncUnaryCall< global::briar.BriarGrpc.BriarServiceConfigurationReply >` `get_service_configurationAsync` (`global::briar.BriarGrpc.BriarServiceConfigurationRequest request`, `grpc::Metadata headers=null`, `global::System.DateTime? deadline=null`, `global::System.Threading.CancellationToken cancellationToken=default(global::System.Threading.CancellationToken)`)
- virtual `grpc::AsyncDuplexStreamingCall< global::briar.BriarGrpc.SearchRequest, global::briar.BriarGrpc.SearchReply >` `search` (`grpc::CallOptions options`)

*REQUIRED Use provided template ids to search a database for that person.*

- virtual `grpc::AsyncDuplexStreamingCall< global::briar.BriarGrpc.SearchRequest, global::briar.BriarGrpc.SearchReply >` `search` (`grpc::Metadata headers=null`, `global::System.DateTime? deadline=null`, `global::System.Threading.CancellationToken cancellationToken=default(global::System.Threading.CancellationToken)`)

*REQUIRED Use provided template ids to search a database for that person.*

- virtual `grpc::AsyncServerStreamingCall< global::briar.BriarGrpc.EnrollReply >` `sigset_enroll_custom` (`global::briar.BriarGrpc.EnrollCustomRequest request`, `grpc::CallOptions options`)

*OPTIONAL FOR PHASE 1 EVALUATION, NOT FOR GENERAL PURPOSE USE*

- virtual `grpc::AsyncServerStreamingCall< global::briar.BriarGrpc.EnrollReply >` `sigset_enroll_custom` (`global::briar.BriarGrpc.EnrollCustomRequest request`, `grpc::Metadata headers=null`, `global::System.DateTime? deadline=null`, `global::System.Threading.CancellationToken cancellationToken=default(global::System.Threading.CancellationToken)`)

*OPTIONAL FOR PHASE 1 EVALUATION, NOT FOR GENERAL PURPOSE USE*

- virtual `global::briar.BriarGrpc.StatusReply` `status` (`global::briar.BriarGrpc.StatusRequest request`, `grpc::CallOptions options`)

*REQUIRED Check service status.*

- virtual `global::briar.BriarGrpc.StatusReply` `status` (`global::briar.BriarGrpc.StatusRequest request`, `grpc::Metadata headers=null`, `global::System.DateTime? deadline=null`, `global::System.Threading.CancellationToken cancellationToken=default(global::System.Threading.CancellationToken)`)

*REQUIRED Check service status.*

- virtual `grpc::AsyncUnaryCall< global::briar.BriarGrpc.StatusReply >` `statusAsync` (`global::briar.BriarGrpc.StatusRequest request`, `grpc::CallOptions options`)

*REQUIRED Check service status.*

- virtual `grpc::AsyncUnaryCall< global::briar.BriarGrpc.StatusReply >` `statusAsync` (`global::briar.BriarGrpc.StatusRequest request`, `grpc::Metadata headers=null`, `global::System.DateTime? deadline=null`, `global::System.Threading.CancellationToken cancellationToken=default(global::System.Threading.CancellationToken)`)

*REQUIRED Check service status.*

- virtual `grpc::AsyncDuplexStreamingCall< global::briar.BriarGrpc.TrackRequest, global::briar.BriarGrpc.TrackReply >` `track` (`grpc::CallOptions options`)

*OPTIONAL To run tracking on video media.*

- virtual `grpc::AsyncDuplexStreamingCall< global::briar.BriarGrpc.TrackRequest, global::briar.BriarGrpc.TrackReply >` `track` (`grpc::Metadata` headers=null, `global::System.DateTime?` deadline=null, `global::System.Threading.CancellationToken` cancellationToken=default(`global::System.Threading.CancellationToken`))

*OPTIONAL To run tracking on video media.*

- virtual `grpc::AsyncClientStreamingCall< global::briar.BriarGrpc.VerifyRequest, global::briar.BriarGrpc.VerifyReply >` `verify` (`grpc::CallOptions` options)

*REQUIRED Compare two template ids and verify if they are the same person.*

- virtual `grpc::AsyncClientStreamingCall< global::briar.BriarGrpc.VerifyRequest, global::briar.BriarGrpc.VerifyReply >` `verify` (`grpc::Metadata` headers=null, `global::System.DateTime?` deadline=null, `global::System.Threading.CancellationToken` cancellationToken=default(`global::System.Threading.CancellationToken`))

*REQUIRED Compare two template ids and verify if they are the same person.*

## Protected Member Functions

- `BRIARServiceClient` ()  
*Protected parameterless constructor to allow creation of test doubles.*
- `BRIARServiceClient` (`ClientBaseConfiguration` configuration)  
*Protected constructor to allow creation of configured clients.*
- override `BRIARServiceClient NewInstance` (`ClientBaseConfiguration` configuration)  
*Creates a new instance of client from given ClientBaseConfiguration.*

### 7.17.1 Detailed Description

Client for BRIARService

### 7.17.2 Constructor & Destructor Documentation

#### 7.17.2.1 BRIARServiceClient() [1/4]

```
briar.BriarGrpc.BRIARService.BRIARServiceClient.BRIARServiceClient (
    grpc::ChannelBase channel ) [inline]
```

Creates a new client for BRIARService

##### Parameters

<code>channel</code>	The channel to use to make remote calls.
----------------------	--

#### 7.17.2.2 BRIARServiceClient() [2/4]

```
briar.BriarGrpc.BRIARService.BRIARServiceClient.BRIARServiceClient (
    grpc::CallInvoker callInvoker ) [inline]
```

Creates a new client for BRIARService that uses a custom `CallInvoker`.

#### Parameters

<i>callInvoker</i>	The callInvoker to use to make remote calls.
--------------------	--

### 7.17.2.3 BRIARServiceClient() [3/4]

```
briar.BriarGrpc.BRIARService.BRIARServiceClient.BRIARServiceClient ( ) [inline], [protected]
```

Protected parameterless constructor to allow creation of test doubles.

### 7.17.2.4 BRIARServiceClient() [4/4]

```
briar.BriarGrpc.BRIARService.BRIARServiceClient.BRIARServiceClient (
    ClientBaseConfiguration configuration ) [inline], [protected]
```

Protected constructor to allow creation of configured clients.

#### Parameters

<i>configuration</i>	The client configuration.
----------------------	---------------------------

## 7.17.3 Member Function Documentation

### 7.17.3.1 database\_checkpoint() [1/2]

```
virtual global.briar.BriarGrpc.DatabaseCheckpointReply briar.BriarGrpc.BRIARService.BRIARServiceClient.database_checkpoint (
    global::briar.BriarGrpc.DatabaseCheckpointRequest request,
    grpc::CallOptions options ) [inline], [virtual]
```

OPTIONAL will save a database's progress without finalizing

#### Parameters

<i>request</i>	The request to send to the server.
<i>options</i>	The options for the call.

**Returns**

The response received from the server.

**7.17.3.2 database\_checkpoint() [2/2]**

```
virtual global.briar.BriarGrpc.DatabaseCheckpointReply briar.BriarGrpc.BRIARService.BRIARService↔
Client.database_checkpoint (
    global::briar.BriarGrpc.DatabaseCheckpointRequest request,
    grpc::Metadata headers = null,
    global::System.DateTime? deadline = null,
    global::System.Threading.CancellationToken cancellationToken = default(global::↔
:System.Threading.CancellationToken) ) [inline], [virtual]
```

OPTIONAL will save a database's progress without finalizing

**Parameters**

<i>request</i>	The request to send to the server.
<i>headers</i>	The initial metadata to send with the call. This parameter is optional.
<i>deadline</i>	An optional deadline for the call. The call will be cancelled if deadline is hit.
<i>cancellationToken</i>	An optional token for canceling the call.

**Returns**

The response received from the server.

**7.17.3.3 database\_checkpoint\_subject() [1/2]**

```
virtual global.briar.BriarGrpc.DatabaseCheckpointReply briar.BriarGrpc.BRIARService.BRIARService↔
Client.database_checkpoint_subject (
    global::briar.BriarGrpc.DatabaseCheckpointSubjectRequest request,
    grpc::CallOptions options ) [inline], [virtual]
```

OPTIONAL will signal to your algorithm that the media for a specific subject is finished, and possible finalization can be run.

**Parameters**

<i>request</i>	The request to send to the server.
<i>options</i>	The options for the call.

**Returns**

The response received from the server.

**7.17.3.4 database\_checkpoint\_subject() [2/2]**

```
virtual global.briar.BriarGrpc.DatabaseCheckpointReply briar.BriarGrpc.BRIARService.BRIARServiceClient.database_checkpoint_subject (
    global::briar.BriarGrpc.DatabaseCheckpointSubjectRequest request,
    grpc::Metadata headers = null,
    global::System.DateTime? deadline = null,
    global::System.Threading.CancellationToken cancellationToken = default(global::System.Threading.CancellationToken) ) [inline], [virtual]
```

OPTIONAL will signal to your algorithm that the media for a specific subject is finished, and possible finalization can be run.

**Parameters**

<i>request</i>	The request to send to the server.
<i>headers</i>	The initial metadata to send with the call. This parameter is optional.
<i>deadline</i>	An optional deadline for the call. The call will be cancelled if deadline is hit.
<i>cancellationToken</i>	An optional token for canceling the call.

**Returns**

The response received from the server.

**7.17.3.5 database\_checkpoint\_subjectAsync() [1/2]**

```
virtual grpc.AsyncUnaryCall<global.briar.BriarGrpc.DatabaseCheckpointReply> briar.BriarGrpc.BRIARService.BRIARServiceClient.database_checkpoint_subjectAsync (
    global::briar.BriarGrpc.DatabaseCheckpointSubjectRequest request,
    grpc::CallOptions options ) [inline], [virtual]
```

OPTIONAL will signal to your algorithm that the media for a specific subject is finished, and possible finalization can be run.

**Parameters**

<i>request</i>	The request to send to the server.
<i>options</i>	The options for the call.

**Returns**

The call object.

**7.17.3.6 database\_checkpoint\_subjectAsync() [2/2]**

```
virtual grpc.AsyncUnaryCall<global.briar.BriarGrpc.DatabaseCheckpointReply> briar.BriarGrpc.BRIARService.BRIARServiceClient.database_checkpoint_subjectAsync (
```

```

        global::briar.BriarGrpc.DatabaseCheckpointSubjectRequest request,
        grpc::Metadata headers = null,
        global::System.DateTime? deadline = null,
        global::System.Threading.CancellationToken cancellationToken = default(global::↵
        :System.Threading.CancellationToken) ) [inline], [virtual]

```

OPTIONAL will signal to your algorithm that the media for a specific subject is finished, and possible finalization can be run.

#### Parameters

<i>request</i>	The request to send to the server.
<i>headers</i>	The initial metadata to send with the call. This parameter is optional.
<i>deadline</i>	An optional deadline for the call. The call will be cancelled if deadline is hit.
<i>cancellationToken</i>	An optional token for canceling the call.

#### Returns

The call object.

#### 7.17.3.7 database\_checkpointAsync() [1/2]

```

virtual grpc.AsyncUnaryCall<global.briar.BriarGrpc.DatabaseCheckpointReply> briar.BriarGrpc.↵
BRIARService.BRIARServiceClient.database_checkpointAsync (
    global::briar.BriarGrpc.DatabaseCheckpointRequest request,
    grpc::CallOptions options ) [inline], [virtual]

```

OPTIONAL will save a database's progress without finalizing

#### Parameters

<i>request</i>	The request to send to the server.
<i>options</i>	The options for the call.

#### Returns

The call object.

#### 7.17.3.8 database\_checkpointAsync() [2/2]

```

virtual grpc.AsyncUnaryCall<global.briar.BriarGrpc.DatabaseCheckpointReply> briar.BriarGrpc.↵
BRIARService.BRIARServiceClient.database_checkpointAsync (
    global::briar.BriarGrpc.DatabaseCheckpointRequest request,
    grpc::Metadata headers = null,
    global::System.DateTime? deadline = null,
    global::System.Threading.CancellationToken cancellationToken = default(global:↵
    :System.Threading.CancellationToken) ) [inline], [virtual]

```

OPTIONAL will save a database's progress without finalizing

## Parameters

<i>request</i>	The request to send to the server.
<i>headers</i>	The initial metadata to send with the call. This parameter is optional.
<i>deadline</i>	An optional deadline for the call. The call will be cancelled if deadline is hit.
<i>cancellationToken</i>	An optional token for canceling the call.

## Returns

The call object.

## 7.17.3.9 database\_compute\_search() [1/2]

```
virtual grpc.AsyncServerStreamingCall<global.briar.BriarGrpc.SearchDatabaseReply> briar.<-
BriarGrpc.BRIARService.BRIARServiceClient.database_compute_search (
    global::briar.BriarGrpc.SearchDatabaseRequest request,
    grpc::CallOptions options ) [inline], [virtual]
```

REQUIRED FOR PHASE 1 EVALUATION Given two database names compute a set of search results of size ProbeDatabase X Search Rank.

The matrix may be used for testing, analysis, client side clustering, etc. This may needed to be implemented to support evaluations in the future.

## Parameters

<i>request</i>	The request to send to the server.
<i>options</i>	The options for the call.

## Returns

The call object.

## 7.17.3.10 database\_compute\_search() [2/2]

```
virtual grpc.AsyncServerStreamingCall<global.briar.BriarGrpc.SearchDatabaseReply> briar.<-
BriarGrpc.BRIARService.BRIARServiceClient.database_compute_search (
    global::briar.BriarGrpc.SearchDatabaseRequest request,
    grpc::Metadata headers = null,
    global::System.DateTime? deadline = null,
    global::System.Threading.CancellationToken cancellationToken = default(global.<-
:System.Threading.CancellationToken) ) [inline], [virtual]
```

REQUIRED FOR PHASE 1 EVALUATION Given two database names compute a set of search results of size ProbeDatabase X Search Rank.

The matrix may be used for testing, analysis, client side clustering, etc. This may needed to be implemented to support evaluations in the future.

## Parameters

<i>request</i>	The request to send to the server.
<i>headers</i>	The initial metadata to send with the call. This parameter is optional.
<i>deadline</i>	An optional deadline for the call. The call will be cancelled if deadline is hit.
<i>cancellationToken</i>	An optional token for canceling the call.

## Returns

The call object.

**7.17.3.11 database\_compute\_verify() [1/2]**

```
virtual global.briar.BriarGrpc.VerifyDatabaseReply briar.BriarGrpc.BRIARService.BRIARService←
Client.database_compute_verify (
    global::briar.BriarGrpc.VerifyDatabaseRequest request,
    grpc::CallOptions options ) [inline], [virtual]
```

REQUIRED FOR PHASE 1 EVALUATION Given two database names compute a score matrix of size databaseA X databaseB.

The matrix may be used for testing, analysis, client side clustering, etc. This may needed to be implemented to support evaluations in the future.

## Parameters

<i>request</i>	The request to send to the server.
<i>options</i>	The options for the call.

## Returns

The response received from the server.

**7.17.3.12 database\_compute\_verify() [2/2]**

```
virtual global.briar.BriarGrpc.VerifyDatabaseReply briar.BriarGrpc.BRIARService.BRIARService←
Client.database_compute_verify (
    global::briar.BriarGrpc.VerifyDatabaseRequest request,
    grpc::Metadata headers = null,
    global::System.DateTime? deadline = null,
    global::System.Threading.CancellationToken cancellationToken = default(global::←
:System.Threading.CancellationToken) ) [inline], [virtual]
```

REQUIRED FOR PHASE 1 EVALUATION Given two database names compute a score matrix of size databaseA X databaseB.

The matrix may be used for testing, analysis, client side clustering, etc. This may needed to be implemented to support evaluations in the future.

## Parameters

<i>request</i>	The request to send to the server.
<i>headers</i>	The initial metadata to send with the call. This parameter is optional.
<i>deadline</i>	An optional deadline for the call. The call will be cancelled if deadline is hit.
<i>cancellationToken</i>	An optional token for canceling the call.

## Returns

The response received from the server.

## 7.17.3.13 database\_compute\_verifyAsync() [1/2]

```
virtual grpc::AsyncUnaryCall<global::briar::BriarGrpc::VerifyDatabaseReply> briar::BriarGrpc::↔
BRIARService::BRIARServiceClient::database_compute_verifyAsync (
    global::briar::BriarGrpc::VerifyDatabaseRequest request,
    grpc::CallOptions options ) [inline], [virtual]
```

REQUIRED FOR PHASE 1 EVALUATION Given two database names compute a score matrix of size databaseA X databaseB.

The matrix may be used for testing, analysis, client side clustering, etc. This may needed to be implemented to support evaluations in the future.

## Parameters

<i>request</i>	The request to send to the server.
<i>options</i>	The options for the call.

## Returns

The call object.

## 7.17.3.14 database\_compute\_verifyAsync() [2/2]

```
virtual grpc::AsyncUnaryCall<global::briar::BriarGrpc::VerifyDatabaseReply> briar::BriarGrpc::↔
BRIARService::BRIARServiceClient::database_compute_verifyAsync (
    global::briar::BriarGrpc::VerifyDatabaseRequest request,
    grpc::Metadata headers = null,
    global::System.DateTime? deadline = null,
    global::System.Threading.CancellationToken cancellationToken = default(global::↔
:System.Threading.CancellationToken) ) [inline], [virtual]
```

REQUIRED FOR PHASE 1 EVALUATION Given two database names compute a score matrix of size databaseA X databaseB.

The matrix may be used for testing, analysis, client side clustering, etc. This may needed to be implemented to support evaluations in the future.

## Parameters

<i>request</i>	The request to send to the server.
<i>headers</i>	The initial metadata to send with the call. This parameter is optional.
<i>deadline</i>	An optional deadline for the call. The call will be cancelled if deadline is hit.
<i>cancellationToken</i>	An optional token for canceling the call.

## Returns

The call object.

**7.17.3.15 database\_create() [1/2]**

```
virtual global.briar.BriarGrpc.DatabaseCreateReply briar.BriarGrpc.BRIARService.BRIARService←
Client.database_create (
    global::briar.BriarGrpc.DatabaseCreateRequest request,
    grpc::CallOptions options ) [inline], [virtual]
```

REQUIRED Create and initialize a database on the server.

This should prepare the database to receive enrollment requests.

## Parameters

<i>request</i>	The request to send to the server.
<i>options</i>	The options for the call.

## Returns

The response received from the server.

**7.17.3.16 database\_create() [2/2]**

```
virtual global.briar.BriarGrpc.DatabaseCreateReply briar.BriarGrpc.BRIARService.BRIARService←
Client.database_create (
    global::briar.BriarGrpc.DatabaseCreateRequest request,
    grpc::Metadata headers = null,
    global::System.DateTime? deadline = null,
    global::System.Threading.CancellationToken cancellationToken = default(global::←
:System.Threading.CancellationToken) ) [inline], [virtual]
```

REQUIRED Create and initialize a database on the server.

This should prepare the database to receive enrollment requests.

## Parameters

<i>request</i>	The request to send to the server.
<i>headers</i>	The initial metadata to send with the call. This parameter is optional.
<i>deadline</i>	An optional deadline for the call. The call will be cancelled if deadline is hit.
<i>cancellationToken</i>	An optional token for canceling the call.

## Returns

The response received from the server.

## 7.17.3.17 database\_createAsync() [1/2]

```
virtual grpc.AsyncUnaryCall<global.briar.BriarGrpc.DatabaseCreateReply> briar.BriarGrpc.↔
BRIARService.BRIARServiceClient.database_createAsync (
    global::briar.BriarGrpc.DatabaseCreateRequest request,
    grpc::CallOptions options ) [inline], [virtual]
```

REQUIRED Create and initialize a database on the server.

This should prepare the database to receive enrollment requests.

## Parameters

<i>request</i>	The request to send to the server.
<i>options</i>	The options for the call.

## Returns

The call object.

## 7.17.3.18 database\_createAsync() [2/2]

```
virtual grpc.AsyncUnaryCall<global.briar.BriarGrpc.DatabaseCreateReply> briar.BriarGrpc.↔
BRIARService.BRIARServiceClient.database_createAsync (
    global::briar.BriarGrpc.DatabaseCreateRequest request,
    grpc::Metadata headers = null,
    global::System.DateTime? deadline = null,
    global::System.Threading.CancellationToken cancellationToken = default(global:↔
:System.Threading.CancellationToken) ) [inline], [virtual]
```

REQUIRED Create and initialize a database on the server.

This should prepare the database to receive enrollment requests.

## Parameters

<i>request</i>	The request to send to the server.
<i>headers</i>	The initial metadata to send with the call. This parameter is optional.
<i>deadline</i>	An optional deadline for the call. The call will be cancelled if deadline is hit.
<i>cancellationToken</i>	An optional token for canceling the call.

## Returns

The call object.

**7.17.3.19 database\_delete()** [1/2]

```
virtual global.briar.BriarGrpc.DatabaseDeleteReply briar.BriarGrpc.BRIARService.BRIARService←
Client.database_delete (
    global::briar.BriarGrpc.DatabaseDeleteRequest request,
    grpc::CallOptions options ) [inline], [virtual]
```

REQUIRED Delete a database on the server.

This should remove the database and remove associated storage.

## Parameters

<i>request</i>	The request to send to the server.
<i>options</i>	The options for the call.

## Returns

The response received from the server.

**7.17.3.20 database\_delete()** [2/2]

```
virtual global.briar.BriarGrpc.DatabaseDeleteReply briar.BriarGrpc.BRIARService.BRIARService←
Client.database_delete (
    global::briar.BriarGrpc.DatabaseDeleteRequest request,
    grpc::Metadata headers = null,
    global::System.DateTime? deadline = null,
    global::System.Threading.CancellationToken cancellationToken = default(global::←
:System.Threading.CancellationToken) ) [inline], [virtual]
```

REQUIRED Delete a database on the server.

This should remove the database and remove associated storage.

## Parameters

<i>request</i>	The request to send to the server.
<i>headers</i>	The initial metadata to send with the call. This parameter is optional.
<i>deadline</i>	An optional deadline for the call. The call will be cancelled if deadline is hit.
<i>cancellationToken</i>	An optional token for canceling the call.

## Returns

The response received from the server.

## 7.17.3.21 database\_deleteAsync() [1/2]

```
virtual grpc.AsyncUnaryCall<global.briar.BriarGrpc.DatabaseDeleteReply> briar.BriarGrpc.↔
BRIARService.BRIARServiceClient.database_deleteAsync (
    global::briar.BriarGrpc.DatabaseDeleteRequest request,
    grpc::CallOptions options ) [inline], [virtual]
```

REQUIRED Delete a database on the server.

This should remove the database and remove associated storage.

## Parameters

<i>request</i>	The request to send to the server.
<i>options</i>	The options for the call.

## Returns

The call object.

## 7.17.3.22 database\_deleteAsync() [2/2]

```
virtual grpc.AsyncUnaryCall<global.briar.BriarGrpc.DatabaseDeleteReply> briar.BriarGrpc.↔
BRIARService.BRIARServiceClient.database_deleteAsync (
    global::briar.BriarGrpc.DatabaseDeleteRequest request,
    grpc::Metadata headers = null,
    global::System.DateTime? deadline = null,
    global::System.Threading.CancellationToken cancellationToken = default(global:↔
:System.Threading.CancellationToken) ) [inline], [virtual]
```

REQUIRED Delete a database on the server.

This should remove the database and remove associated storage.

## Parameters

<i>request</i>	The request to send to the server.
<i>headers</i>	The initial metadata to send with the call. This parameter is optional.
<i>deadline</i>	An optional deadline for the call. The call will be cancelled if deadline is hit.
<i>cancellationToken</i>	An optional token for canceling the call.

## Returns

The call object.

**7.17.3.23 database\_finalize()** [1/2]

```
virtual global.briar.BriarGrpc.DatabaseFinalizeReply briar.BriarGrpc.BRIARService.BRIARService↔
Client.database_finalize (
    global::briar.BriarGrpc.DatabaseFinalizeRequest request,
    grpc::CallOptions options ) [inline], [virtual]
```

REQUIRED Called after all individuals have been enrolled.

Conduct any analysis of the database entries as needed or optimize for fast verification or search.

## Parameters

<i>request</i>	The request to send to the server.
<i>options</i>	The options for the call.

## Returns

The response received from the server.

**7.17.3.24 database\_finalize()** [2/2]

```
virtual global.briar.BriarGrpc.DatabaseFinalizeReply briar.BriarGrpc.BRIARService.BRIARService↔
Client.database_finalize (
    global::briar.BriarGrpc.DatabaseFinalizeRequest request,
    grpc::Metadata headers = null,
    global::System.DateTime? deadline = null,
    global::System.Threading.CancellationToken cancellationToken = default(global::↔
:System.Threading.CancellationToken) ) [inline], [virtual]
```

REQUIRED Called after all individuals have been enrolled.

Conduct any analysis of the database entries as needed or optimize for fast verification or search.

## Parameters

<i>request</i>	The request to send to the server.
<i>headers</i>	The initial metadata to send with the call. This parameter is optional.
<i>deadline</i>	An optional deadline for the call. The call will be cancelled if deadline is hit.
<i>cancellationToken</i>	An optional token for canceling the call.

## Returns

The response received from the server.

**7.17.3.25 database\_finalizeAsync() [1/2]**

```
virtual grpc.AsyncUnaryCall<global.briar.BriarGrpc.DatabaseFinalizeReply> briar.BriarGrpc.↵  
BRIARService.BRIARServiceClient.database_finalizeAsync (   
    global::briar.BriarGrpc.DatabaseFinalizeRequest request,   
    grpc::CallOptions options ) [inline], [virtual]
```

REQUIRED Called after all individuals have been enrolled.

Conduct any analysis of the database entries as needed or optimize for fast verification or search.

## Parameters

<i>request</i>	The request to send to the server.
<i>options</i>	The options for the call.

## Returns

The call object.

**7.17.3.26 database\_finalizeAsync() [2/2]**

```
virtual grpc.AsyncUnaryCall<global.briar.BriarGrpc.DatabaseFinalizeReply> briar.BriarGrpc.↵  
BRIARService.BRIARServiceClient.database_finalizeAsync (   
    global::briar.BriarGrpc.DatabaseFinalizeRequest request,   
    grpc::Metadata headers = null,   
    global::System.DateTime? deadline = null,   
    global::System.Threading.CancellationToken cancellationToken = default(global:↵  
:System.Threading.CancellationToken) ) [inline], [virtual]
```

REQUIRED Called after all individuals have been enrolled.

Conduct any analysis of the database entries as needed or optimize for fast verification or search.

## Parameters

<i>request</i>	The request to send to the server.
<i>headers</i>	The initial metadata to send with the call. This parameter is optional.
<i>deadline</i>	An optional deadline for the call. The call will be cancelled if deadline is hit.
<i>cancellationToken</i>	An optional token for canceling the call.

## Returns

The call object.

**7.17.3.27 database\_has\_entries() [1/2]**

```
virtual grpc.AsyncDuplexStreamingCall<global.briar.BriarGrpc.DatabaseHasEntryRequest, global.briar.BriarGrpc.DatabaseHasEntryReply> briar.BriarGrpc.BRIARService.BRIARServiceClient.database_has_entries (
    grpc::CallOptions options ) [inline], [virtual]
```

**7.17.3.28 database\_has\_entries() [2/2]**

```
virtual grpc.AsyncDuplexStreamingCall<global.briar.BriarGrpc.DatabaseHasEntryRequest, global.briar.BriarGrpc.DatabaseHasEntryReply> briar.BriarGrpc.BRIARService.BRIARServiceClient.database_has_entries (
    grpc::Metadata headers = null,
    global::System.DateTime? deadline = null,
    global::System.Threading.CancellationToken cancellationToken = default(global::System.Threading.CancellationToken) ) [inline], [virtual]
```

**7.17.3.29 database\_has\_entry() [1/2]**

```
virtual global.briar.BriarGrpc.DatabaseHasEntryReply briar.BriarGrpc.BRIARService.BRIARServiceClient.database_has_entry (
    global::briar.BriarGrpc.DatabaseHasEntryRequest request,
    grpc::CallOptions options ) [inline], [virtual]
```

**7.17.3.30 database\_has\_entry() [2/2]**

```
virtual global.briar.BriarGrpc.DatabaseHasEntryReply briar.BriarGrpc.BRIARService.BRIARServiceClient.database_has_entry (
    global::briar.BriarGrpc.DatabaseHasEntryRequest request,
    grpc::Metadata headers = null,
    global::System.DateTime? deadline = null,
    global::System.Threading.CancellationToken cancellationToken = default(global::System.Threading.CancellationToken) ) [inline], [virtual]
```

**7.17.3.31 database\_has\_entryAsync() [1/2]**

```
virtual grpc.AsyncUnaryCall<global.briar.BriarGrpc.DatabaseHasEntryReply> briar.BriarGrpc.↵
BRIARService.BRIARServiceClient.database_has_entryAsync (
    global::briar.BriarGrpc.DatabaseHasEntryRequest request,
    grpc::CallOptions options ) [inline], [virtual]
```

**7.17.3.32 database\_has\_entryAsync() [2/2]**

```
virtual grpc.AsyncUnaryCall<global.briar.BriarGrpc.DatabaseHasEntryReply> briar.BriarGrpc.↵
BRIARService.BRIARServiceClient.database_has_entryAsync (
    global::briar.BriarGrpc.DatabaseHasEntryRequest request,
    grpc::Metadata headers = null,
    global::System.DateTime? deadline = null,
    global::System.Threading.CancellationToken cancellationToken = default(global:↵
:System.Threading.CancellationToken) ) [inline], [virtual]
```

**7.17.3.33 database\_info() [1/2]**

```
virtual global.briar.BriarGrpc.DatabaseInfoReply briar.BriarGrpc.BRIARService.BRIARService↵
Client.database_info (
    global::briar.BriarGrpc.DatabaseInfoRequest request,
    grpc::CallOptions options ) [inline], [virtual]
```

REQUIRED FOR PHASE 1 EVALUATION Return the associated summary information of a specific database.

**Parameters**

<i>request</i>	The request to send to the server.
<i>options</i>	The options for the call.

**Returns**

The response received from the server.

**7.17.3.34 database\_info() [2/2]**

```
virtual global.briar.BriarGrpc.DatabaseInfoReply briar.BriarGrpc.BRIARService.BRIARService↵
Client.database_info (
    global::briar.BriarGrpc.DatabaseInfoRequest request,
    grpc::Metadata headers = null,
    global::System.DateTime? deadline = null,
    global::System.Threading.CancellationToken cancellationToken = default(global:↵
:System.Threading.CancellationToken) ) [inline], [virtual]
```

REQUIRED FOR PHASE 1 EVALUATION Return the associated summary information of a specific database.

## Parameters

<i>request</i>	The request to send to the server.
<i>headers</i>	The initial metadata to send with the call. This parameter is optional.
<i>deadline</i>	An optional deadline for the call. The call will be cancelled if deadline is hit.
<i>cancellationToken</i>	An optional token for canceling the call.

## Returns

The response received from the server.

**7.17.3.35 database\_infoAsync() [1/2]**

```
virtual grpc.AsyncUnaryCall<global.briar.BriarGrpc.DatabaseInfoReply> briar.BriarGrpc.BRIARService.↵
BRIARServiceClient.database_infoAsync (
    global::briar.BriarGrpc.DatabaseInfoRequest request,
    grpc::CallOptions options ) [inline], [virtual]
```

REQUIRED FOR PHASE 1 EVALUATION Return the associated summary information of a specific database.

## Parameters

<i>request</i>	The request to send to the server.
<i>options</i>	The options for the call.

## Returns

The call object.

**7.17.3.36 database\_infoAsync() [2/2]**

```
virtual grpc.AsyncUnaryCall<global.briar.BriarGrpc.DatabaseInfoReply> briar.BriarGrpc.BRIARService.↵
BRIARServiceClient.database_infoAsync (
    global::briar.BriarGrpc.DatabaseInfoRequest request,
    grpc::Metadata headers = null,
    global::System.DateTime? deadline = null,
    global::System.Threading.CancellationToken cancellationToken = default(global:↵
:System.Threading.CancellationToken) ) [inline], [virtual]
```

REQUIRED FOR PHASE 1 EVALUATION Return the associated summary information of a specific database.

## Parameters

<i>request</i>	The request to send to the server.
<i>headers</i>	The initial metadata to send with the call. This parameter is optional.
<i>deadline</i>	An optional deadline for the call. The call will be cancelled if deadline is hit.
<i>cancellationToken</i>	An optional token for canceling the call.

**Returns**

The call object.

**7.17.3.37 database\_insert() [1/2]**

```
virtual global.briar.BriarGrpc.DatabaseInsertReply briar.BriarGrpc.BRIARService.BRIARServiceClient.database_insert (
    global::briar.BriarGrpc.DatabaseInsertRequest request,
    grpc::CallOptions options ) [inline], [virtual]
```

OPTIONAL Clients can insert templates directly into a database for database management purposes.

**Parameters**

<i>request</i>	The request to send to the server.
<i>options</i>	The options for the call.

**Returns**

The response received from the server.

**7.17.3.38 database\_insert() [2/2]**

```
virtual global.briar.BriarGrpc.DatabaseInsertReply briar.BriarGrpc.BRIARService.BRIARServiceClient.database_insert (
    global::briar.BriarGrpc.DatabaseInsertRequest request,
    grpc::Metadata headers = null,
    global::System.DateTime? deadline = null,
    global::System.Threading.CancellationToken cancellationToken = default(global::System.Threading.CancellationToken) ) [inline], [virtual]
```

OPTIONAL Clients can insert templates directly into a database for database management purposes.

**Parameters**

<i>request</i>	The request to send to the server.
<i>headers</i>	The initial metadata to send with the call. This parameter is optional.
<i>deadline</i>	An optional deadline for the call. The call will be cancelled if deadline is hit.
<i>cancellationToken</i>	An optional token for canceling the call.

**Returns**

The response received from the server.

**7.17.3.39 database\_insertAsync()** [1/2]

```
virtual grpc.AsyncUnaryCall<global.briar.BriarGrpc.DatabaseInsertReply> briar.BriarGrpc.↵
BRIARService.BRIARServiceClient.database_insertAsync (
    global::briar.BriarGrpc.DatabaseInsertRequest request,
    grpc::CallOptions options ) [inline], [virtual]
```

OPTIONAL Clients can insert templates directly into a database for database management purposes.

**Parameters**

<i>request</i>	The request to send to the server.
<i>options</i>	The options for the call.

**Returns**

The call object.

**7.17.3.40 database\_insertAsync()** [2/2]

```
virtual grpc.AsyncUnaryCall<global.briar.BriarGrpc.DatabaseInsertReply> briar.BriarGrpc.↵
BRIARService.BRIARServiceClient.database_insertAsync (
    global::briar.BriarGrpc.DatabaseInsertRequest request,
    grpc::Metadata headers = null,
    global::System.DateTime? deadline = null,
    global::System.Threading.CancellationToken cancellationToken = default(global:↵
:System.Threading.CancellationToken) ) [inline], [virtual]
```

OPTIONAL Clients can insert templates directly into a database for database management purposes.

**Parameters**

<i>request</i>	The request to send to the server.
<i>headers</i>	The initial metadata to send with the call. This parameter is optional.
<i>deadline</i>	An optional deadline for the call. The call will be cancelled if deadline is hit.
<i>cancellationToken</i>	An optional token for canceling the call.

**Returns**

The call object.

**7.17.3.41 database\_list()** [1/2]

```
virtual global.briar.BriarGrpc.DatabaseListReply briar.BriarGrpc.BRIARService.BRIARService↵
Client.database_list (
```

```
global::briar.BriarGrpc.DatabaseListRequest request,  
grpc::CallOptions options ) [inline], [virtual]
```

REQUIRED FOR PHASE 1 EVALUATION List the names of the galleries on this service.

## Parameters

<i>request</i>	The request to send to the server.
<i>options</i>	The options for the call.

## Returns

The response received from the server.

**7.17.3.42 database\_list()** [2/2]

```
virtual global.briar.BriarGrpc.DatabaseListReply briar.BriarGrpc.BRIARService.BRIARService↔
Client.database_list (
    global::briar.BriarGrpc.DatabaseListRequest request,
    grpc::Metadata headers = null,
    global::System.DateTime? deadline = null,
    global::System.Threading.CancellationToken cancellationToken = default(global::↔
:System.Threading.CancellationToken) ) [inline], [virtual]
```

REQUIRED FOR PHASE 1 EVALUATION List the names of the galleries on this service.

## Parameters

<i>request</i>	The request to send to the server.
<i>headers</i>	The initial metadata to send with the call. This parameter is optional.
<i>deadline</i>	An optional deadline for the call. The call will be cancelled if deadline is hit.
<i>cancellationToken</i>	An optional token for canceling the call.

## Returns

The response received from the server.

**7.17.3.43 database\_list\_entries()** [1/2]

```
virtual global.briar.BriarGrpc.DatabaseListentriesReply briar.BriarGrpc.BRIARService.BRIARService↔
Client.database_list_entries (
    global::briar.BriarGrpc.DatabaseListEntriesRequest request,
    grpc::CallOptions options ) [inline], [virtual]
```

REQUIRED FOR PHASE 1 EVALUATION List the enrollments and associated metadata in the database.

## Parameters

<i>request</i>	The request to send to the server.
<i>options</i>	The options for the call.

**Returns**

The response received from the server.

**7.17.3.44 database\_list\_entries() [2/2]**

```
virtual global.briar.BriarGrpc.DatabaseListEntriesReply briar.BriarGrpc.BRIARService.BRIARServiceClient.database_list_entries (
    global::briar.BriarGrpc.DatabaseListEntriesRequest request,
    grpc::Metadata headers = null,
    global::System.DateTime? deadline = null,
    global::System.Threading.CancellationToken cancellationToken = default(global::System.Threading.CancellationToken) ) [inline], [virtual]
```

REQUIRED FOR PHASE 1 EVALUATION List the enrollments and associated metadata in the database.

**Parameters**

<i>request</i>	The request to send to the server.
<i>headers</i>	The initial metadata to send with the call. This parameter is optional.
<i>deadline</i>	An optional deadline for the call. The call will be cancelled if deadline is hit.
<i>cancellationToken</i>	An optional token for canceling the call.

**Returns**

The response received from the server.

**7.17.3.45 database\_list\_entriesAsync() [1/2]**

```
virtual grpc.AsyncUnaryCall<global.briar.BriarGrpc.DatabaseListEntriesReply> briar.BriarGrpc.BRIARService.BRIARServiceClient.database_list_entriesAsync (
    global::briar.BriarGrpc.DatabaseListEntriesRequest request,
    grpc::CallOptions options ) [inline], [virtual]
```

REQUIRED FOR PHASE 1 EVALUATION List the enrollments and associated metadata in the database.

**Parameters**

<i>request</i>	The request to send to the server.
<i>options</i>	The options for the call.

**Returns**

The call object.

**7.17.3.46 database\_list\_entriesAsync() [2/2]**

```
virtual grpc::AsyncUnaryCall<global::briar::BriarGrpc::DatabaseListEntriesReply> briar::BriarGrpc::BRIARServiceClient::database_list_entriesAsync (
    global::briar::BriarGrpc::DatabaseListEntriesRequest request,
    grpc::Metadata headers = null,
    global::System.DateTime? deadline = null,
    global::System.Threading.CancellationToken cancellationToken = default(global::System.Threading.CancellationToken) ) [inline], [virtual]
```

REQUIRED FOR PHASE 1 EVALUATION List the enrollments and associated metadata in the database.

**Parameters**

<i>request</i>	The request to send to the server.
<i>headers</i>	The initial metadata to send with the call. This parameter is optional.
<i>deadline</i>	An optional deadline for the call. The call will be cancelled if deadline is hit.
<i>cancellationToken</i>	An optional token for canceling the call.

**Returns**

The call object.

**7.17.3.47 database\_listAsync() [1/2]**

```
virtual grpc::AsyncUnaryCall<global::briar::BriarGrpc::DatabaseListReply> briar::BriarGrpc::BRIARServiceClient::database_listAsync (
    global::briar::BriarGrpc::DatabaseListRequest request,
    grpc::CallOptions options ) [inline], [virtual]
```

REQUIRED FOR PHASE 1 EVALUATION List the names of the galleries on this service.

**Parameters**

<i>request</i>	The request to send to the server.
<i>options</i>	The options for the call.

**Returns**

The call object.

**7.17.3.48 database\_listAsync() [2/2]**

```
virtual grpc::AsyncUnaryCall<global::briar::BriarGrpc::DatabaseListReply> briar::BriarGrpc::BRIARServiceClient::database_listAsync (
```

```

    global::briar.BriarGrpc.DatabaseListRequest request,
    grpc::Metadata headers = null,
    global::System.DateTime? deadline = null,
    global::System.Threading.CancellationToken cancellationToken = default(global::System.Threading.CancellationToken) ) [inline], [virtual]

```

REQUIRED FOR PHASE 1 EVALUATION List the names of the galleries on this service.

#### Parameters

<i>request</i>	The request to send to the server.
<i>headers</i>	The initial metadata to send with the call. This parameter is optional.
<i>deadline</i>	An optional deadline for the call. The call will be cancelled if deadline is hit.
<i>cancellationToken</i>	An optional token for canceling the call.

#### Returns

The call object.

#### 7.17.3.49 database\_load() [1/2]

```

virtual global.briar.BriarGrpc.DatabaseLoadReply briar.BriarGrpc.BRIARService.BRIARServiceClient.database_load (
    global::briar.BriarGrpc.DatabaseLoadRequest request,
    grpc::CallOptions options ) [inline], [virtual]

```

REQUIRED Load database by name onto the server running the service.

#### Parameters

<i>request</i>	The request to send to the server.
<i>options</i>	The options for the call.

#### Returns

The response received from the server.

#### 7.17.3.50 database\_load() [2/2]

```

virtual global.briar.BriarGrpc.DatabaseLoadReply briar.BriarGrpc.BRIARService.BRIARServiceClient.database_load (
    global::briar.BriarGrpc.DatabaseLoadRequest request,
    grpc::Metadata headers = null,
    global::System.DateTime? deadline = null,
    global::System.Threading.CancellationToken cancellationToken = default(global::System.Threading.CancellationToken) ) [inline], [virtual]

```

REQUIRED Load database by name onto the server running the service.

## Parameters

<i>request</i>	The request to send to the server.
<i>headers</i>	The initial metadata to send with the call. This parameter is optional.
<i>deadline</i>	An optional deadline for the call. The call will be cancelled if deadline is hit.
<i>cancellationToken</i>	An optional token for canceling the call.

## Returns

The response received from the server.

**7.17.3.51 database\_loadAsync() [1/2]**

```
virtual grpc.AsyncUnaryCall<global.briar.BriarGrpc.DatabaseLoadReply> briar.BriarGrpc.BRIARService.↔
BRIARServiceClient.database_loadAsync (
    global::briar.BriarGrpc.DatabaseLoadRequest request,
    grpc::CallOptions options ) [inline], [virtual]
```

REQUIRED Load database by name onto the server running the service.

## Parameters

<i>request</i>	The request to send to the server.
<i>options</i>	The options for the call.

## Returns

The call object.

**7.17.3.52 database\_loadAsync() [2/2]**

```
virtual grpc.AsyncUnaryCall<global.briar.BriarGrpc.DatabaseLoadReply> briar.BriarGrpc.BRIARService.↔
BRIARServiceClient.database_loadAsync (
    global::briar.BriarGrpc.DatabaseLoadRequest request,
    grpc::Metadata headers = null,
    global::System.DateTime? deadline = null,
    global::System.Threading.CancellationToken cancellationToken = default(global:↔
:System.Threading.CancellationToken) ) [inline], [virtual]
```

REQUIRED Load database by name onto the server running the service.

## Parameters

<i>request</i>	The request to send to the server.
<i>headers</i>	The initial metadata to send with the call. This parameter is optional.
<i>deadline</i>	An optional deadline for the call. The call will be cancelled if deadline is hit.
<i>cancellationToken</i>	An optional token for canceling the call.

**Returns**

The call object.

**7.17.3.53 database\_merge() [1/2]**

```
virtual global.briar.BriarGrpc.DatabaseMergeReply briar.BriarGrpc.BRIARService.BRIARServiceClient.database_merge (
    global::briar.BriarGrpc.DatabaseMergeRequest request,
    grpc::CallOptions options ) [inline], [virtual]
```

REQUIRED FOR PHASE 1 EVALUATION Merge a set of databases into a single database.

**Parameters**

<i>request</i>	The request to send to the server.
<i>options</i>	The options for the call.

**Returns**

The response received from the server.

**7.17.3.54 database\_merge() [2/2]**

```
virtual global.briar.BriarGrpc.DatabaseMergeReply briar.BriarGrpc.BRIARService.BRIARServiceClient.database_merge (
    global::briar.BriarGrpc.DatabaseMergeRequest request,
    grpc::Metadata headers = null,
    global::System.DateTime? deadline = null,
    global::System.Threading.CancellationToken cancellationToken = default(global::System.Threading.CancellationToken) ) [inline], [virtual]
```

REQUIRED FOR PHASE 1 EVALUATION Merge a set of databases into a single database.

**Parameters**

<i>request</i>	The request to send to the server.
<i>headers</i>	The initial metadata to send with the call. This parameter is optional.
<i>deadline</i>	An optional deadline for the call. The call will be cancelled if deadline is hit.
<i>cancellationToken</i>	An optional token for canceling the call.

**Returns**

The response received from the server.

**7.17.3.55 database\_mergeAsync()** [1/2]

```
virtual grpc.AsyncUnaryCall<global.briar.BriarGrpc.DatabaseMergeReply> briar.BriarGrpc.↵
BRIARService.BRIARServiceClient.database_mergeAsync (
    global::briar.BriarGrpc.DatabaseMergeRequest request,
    grpc::CallOptions options ) [inline], [virtual]
```

REQUIRED FOR PHASE 1 EVALUATION Merge a set of databases into a single database.

**Parameters**

<i>request</i>	The request to send to the server.
<i>options</i>	The options for the call.

**Returns**

The call object.

**7.17.3.56 database\_mergeAsync()** [2/2]

```
virtual grpc.AsyncUnaryCall<global.briar.BriarGrpc.DatabaseMergeReply> briar.BriarGrpc.↵
BRIARService.BRIARServiceClient.database_mergeAsync (
    global::briar.BriarGrpc.DatabaseMergeRequest request,
    grpc::Metadata headers = null,
    global::System.DateTime? deadline = null,
    global::System.Threading.CancellationToken cancellationToken = default(global:↵
:System.Threading.CancellationToken) ) [inline], [virtual]
```

REQUIRED FOR PHASE 1 EVALUATION Merge a set of databases into a single database.

**Parameters**

<i>request</i>	The request to send to the server.
<i>headers</i>	The initial metadata to send with the call. This parameter is optional.
<i>deadline</i>	An optional deadline for the call. The call will be cancelled if deadline is hit.
<i>cancellationToken</i>	An optional token for canceling the call.

**Returns**

The call object.

**7.17.3.57 database\_move\_entries()** [1/2]

```
virtual grpc.AsyncDuplexStreamingCall<global.briar.BriarGrpc.DatabaseMoveEntryRequest, global.↵
briar.BriarGrpc.DatabaseMoveEntryReply> briar.BriarGrpc.BRIARService.BRIARServiceClient.↵
database_move_entries (
    grpc::CallOptions options ) [inline], [virtual]
```

**7.17.3.58 database\_move\_entries()** [2/2]

```
virtual grpc.AsyncDuplexStreamingCall<global.briar.BriarGrpc.DatabaseMoveEntryRequest, global.↵
briar.BriarGrpc.DatabaseMoveEntryReply> briar.BriarGrpc.BRIARService.BRIARServiceClient.↵
database_move_entries (
    grpc::Metadata headers = null,
    global::System.DateTime? deadline = null,
    global::System.Threading.CancellationToken cancellationToken = default(global:↵
:System.Threading.CancellationToken) ) [inline], [virtual]
```

**7.17.3.59 database\_move\_entry()** [1/2]

```
virtual global.briar.BriarGrpc.DatabaseMoveEntryReply briar.BriarGrpc.BRIARService.BRIARService↵
Client.database_move_entry (
    global::briar.BriarGrpc.DatabaseMoveEntryRequest request,
    grpc::CallOptions options ) [inline], [virtual]
```

**7.17.3.60 database\_move\_entry()** [2/2]

```
virtual global.briar.BriarGrpc.DatabaseMoveEntryReply briar.BriarGrpc.BRIARService.BRIARService↵
Client.database_move_entry (
    global::briar.BriarGrpc.DatabaseMoveEntryRequest request,
    grpc::Metadata headers = null,
    global::System.DateTime? deadline = null,
    global::System.Threading.CancellationToken cancellationToken = default(global:↵
:System.Threading.CancellationToken) ) [inline], [virtual]
```

**7.17.3.61 database\_move\_entryAsync()** [1/2]

```
virtual grpc.AsyncUnaryCall<global.briar.BriarGrpc.DatabaseMoveEntryReply> briar.BriarGrpc.↵
BRIARService.BRIARServiceClient.database_move_entryAsync (
    global::briar.BriarGrpc.DatabaseMoveEntryRequest request,
    grpc::CallOptions options ) [inline], [virtual]
```

**7.17.3.62 database\_move\_entryAsync()** [2/2]

```
virtual grpc.AsyncUnaryCall<global.briar.BriarGrpc.DatabaseMoveEntryReply> briar.BriarGrpc.↵
BRIARService.BRIARServiceClient.database_move_entryAsync (
    global::briar.BriarGrpc.DatabaseMoveEntryRequest request,
    grpc::Metadata headers = null,
    global::System.DateTime? deadline = null,
    global::System.Threading.CancellationToken cancellationToken = default(global:↵
:System.Threading.CancellationToken) ) [inline], [virtual]
```

**7.17.3.63 database\_refresh()** [1/2]

```
virtual global.briar.BriarGrpc.Empty briar.BriarGrpc.BRIARService.BRIARServiceClient.database↵
_refresh (
    global::briar.BriarGrpc.Empty request,
    grpc::CallOptions options ) [inline], [virtual]
```

REQUIRED explicit call to refresh the database list within the service, in case new databases were created by a parallel service that this one does not see

**Parameters**

<i>request</i>	The request to send to the server.
<i>options</i>	The options for the call.

**Returns**

The response received from the server.

**7.17.3.64 database\_refresh()** [2/2]

```
virtual global.briar.BriarGrpc.Empty briar.BriarGrpc.BRIARService.BRIARServiceClient.database↵
_refresh (
    global::briar.BriarGrpc.Empty request,
    grpc::Metadata headers = null,
    global::System.DateTime? deadline = null,
    global::System.Threading.CancellationToken cancellationToken = default(global:↵
:System.Threading.CancellationToken) ) [inline], [virtual]
```

REQUIRED explicit call to refresh the database list within the service, in case new databases were created by a parallel service that this one does not see

**Parameters**

<i>request</i>	The request to send to the server.
<i>headers</i>	The initial metadata to send with the call. This parameter is optional.
<i>deadline</i>	An optional deadline for the call. The call will be cancelled if deadline is hit.
<i>cancellationToken</i>	An optional token for canceling the call.

**Returns**

The response received from the server.

**7.17.3.65 database\_refreshAsync()** [1/2]

```
virtual grpc.AsyncUnaryCall<global.briar.BriarGrpc.Empty> briar.BriarGrpc.BRIARService.↵
BRIARServiceClient.database_refreshAsync (
```

```
global::briar.BriarGrpc.Empty request,
grpc::CallOptions options ) [inline], [virtual]
```

REQUIRED explicit call to refresh the database list within the service, in case new databases were created by a parallel service that this one does not see

#### Parameters

<i>request</i>	The request to send to the server.
<i>options</i>	The options for the call.

#### Returns

The call object.

### 7.17.3.66 database\_refreshAsync() [2/2]

```
virtual grpc.AsyncUnaryCall<global.briar.BriarGrpc.Empty> briar.BriarGrpc.BRIARService.BRIARServiceClient.database_refreshAsync (
    global::briar.BriarGrpc.Empty request,
    grpc::Metadata headers = null,
    global::System.DateTime? deadline = null,
    global::System.Threading.CancellationToken cancellationToken = default(global::System.Threading.CancellationToken) ) [inline], [virtual]
```

REQUIRED explicit call to refresh the database list within the service, in case new databases were created by a parallel service that this one does not see

#### Parameters

<i>request</i>	The request to send to the server.
<i>headers</i>	The initial metadata to send with the call. This parameter is optional.
<i>deadline</i>	An optional deadline for the call. The call will be cancelled if deadline is hit.
<i>cancellationToken</i>	An optional token for canceling the call.

#### Returns

The call object.

### 7.17.3.67 database\_remove\_templates() [1/2]

```
virtual global.briar.BriarGrpc.DatabaseRemoveTplReply briar.BriarGrpc.BRIARService.BRIARServiceClient.database_remove_templates (
    global::briar.BriarGrpc.DatabaseRemoveTplRequest request,
    grpc::CallOptions options ) [inline], [virtual]
```

REQUIRED Templates and associated records are deleted from a database.

## Parameters

<i>request</i>	The request to send to the server.
<i>options</i>	The options for the call.

## Returns

The response received from the server.

**7.17.3.68 database\_remove\_templates()** [2/2]

```
virtual global.briar.BriarGrpc.DatabaseRemoveTmplsReply briar.BriarGrpc.BRIARService.BRIARService↔
Client.database_remove_templates (
    global::briar.BriarGrpc.DatabaseRemoveTmplsRequest request,
    grpc::Metadata headers = null,
    global::System.DateTime? deadline = null,
    global::System.Threading.CancellationToken cancellationToken = default(global::↔
:System.Threading.CancellationToken) ) [inline], [virtual]
```

REQUIRED Templates and associated records are deleted from a database.

## Parameters

<i>request</i>	The request to send to the server.
<i>headers</i>	The initial metadata to send with the call. This parameter is optional.
<i>deadline</i>	An optional deadline for the call. The call will be cancelled if deadline is hit.
<i>cancellationToken</i>	An optional token for canceling the call.

## Returns

The response received from the server.

**7.17.3.69 database\_remove\_templatesAsync()** [1/2]

```
virtual grpc.AsyncUnaryCall<global.briar.BriarGrpc.DatabaseRemoveTmplsReply> briar.Briar↔
Grpc.BRIARService.BRIARServiceClient.database_remove_templatesAsync (
    global::briar.BriarGrpc.DatabaseRemoveTmplsRequest request,
    grpc::CallOptions options ) [inline], [virtual]
```

REQUIRED Templates and associated records are deleted from a database.

## Parameters

<i>request</i>	The request to send to the server.
<i>options</i>	The options for the call.

**Returns**

The call object.

**7.17.3.70 database\_remove\_templatesAsync()** [2/2]

```
virtual grpc::AsyncUnaryCall<global::briar.BriarGrpc.DatabaseRemoveTmplsReply> briar.BriarGrpc.BRIARService.BRIARServiceClient.database_remove_templatesAsync (
    global::briar.BriarGrpc.DatabaseRemoveTmplsRequest request,
    grpc::Metadata headers = null,
    global::System.DateTime? deadline = null,
    global::System.Threading.CancellationToken cancellationToken = default(global::System.Threading.CancellationToken) ) [inline], [virtual]
```

REQUIRED Templates and associated records are deleted from a database.

**Parameters**

<i>request</i>	The request to send to the server.
<i>headers</i>	The initial metadata to send with the call. This parameter is optional.
<i>deadline</i>	An optional deadline for the call. The call will be cancelled if deadline is hit.
<i>cancellationToken</i>	An optional token for canceling the call.

**Returns**

The call object.

**7.17.3.71 database\_rename()** [1/2]

```
virtual global::briar.BriarGrpc.DatabaseRenameReply briar.BriarGrpc.BRIARService.BRIARServiceClient.database_rename (
    global::briar.BriarGrpc.DatabaseRenameRequest request,
    grpc::CallOptions options ) [inline], [virtual]
```

REQUIRED Rename a database on the server.

This should rename the database.

**Parameters**

<i>request</i>	The request to send to the server.
<i>options</i>	The options for the call.

**Returns**

The response received from the server.

### 7.17.3.72 database\_rename() [2/2]

```
virtual global.briar.BriarGrpc.DatabaseRenameReply briar.BriarGrpc.BRIARService.BRIARServiceClient.database_rename (
    global::briar.BriarGrpc.DatabaseRenameRequest request,
    grpc::Metadata headers = null,
    global::System.DateTime? deadline = null,
    global::System.Threading.CancellationToken cancellationToken = default(global::System.Threading.CancellationToken) ) [inline], [virtual]
```

REQUIRED Rename a database on the server.

This should rename the database.

#### Parameters

<i>request</i>	The request to send to the server.
<i>headers</i>	The initial metadata to send with the call. This parameter is optional.
<i>deadline</i>	An optional deadline for the call. The call will be cancelled if deadline is hit.
<i>cancellationToken</i>	An optional token for canceling the call.

#### Returns

The response received from the server.

### 7.17.3.73 database\_renameAsync() [1/2]

```
virtual grpc.AsyncUnaryCall<global.briar.BriarGrpc.DatabaseRenameReply> briar.BriarGrpc.BRIARService.BRIARServiceClient.database_renameAsync (
    global::briar.BriarGrpc.DatabaseRenameRequest request,
    grpc::CallOptions options ) [inline], [virtual]
```

REQUIRED Rename a database on the server.

This should rename the database.

#### Parameters

<i>request</i>	The request to send to the server.
<i>options</i>	The options for the call.

#### Returns

The call object.

**7.17.3.74 database\_renameAsync()** [2/2]

```
virtual grpc.AsyncUnaryCall<global.briar.BriarGrpc.DatabaseRenameReply> briar.BriarGrpc.↵
BRIARService.BRIARServiceClient.database_renameAsync (
    global::briar.BriarGrpc.DatabaseRenameRequest request,
    grpc::Metadata headers = null,
    global::System.DateTime? deadline = null,
    global::System.Threading.CancellationToken cancellationToken = default(global:↵
:System.Threading.CancellationToken) ) [inline], [virtual]
```

**REQUIRED** Rename a database on the server.

This should rename the database.

**Parameters**

<i>request</i>	The request to send to the server.
<i>headers</i>	The initial metadata to send with the call. This parameter is optional.
<i>deadline</i>	An optional deadline for the call. The call will be cancelled if deadline is hit.
<i>cancellationToken</i>	An optional token for canceling the call.

**Returns**

The call object.

**7.17.3.75 database\_retrieve()** [1/2]

```
virtual grpc.AsyncDuplexStreamingCall<global.briar.BriarGrpc.DatabaseRetrieveRequest, global.↵
briar.BriarGrpc.DatabaseRetrieveReply> briar.BriarGrpc.BRIARService.BRIARServiceClient.↵
database_retrieve (
    grpc::CallOptions options ) [inline], [virtual]
```

**OPTIONAL** Clients can retrieve templates with metadata from a database for client side storage, processing, backup, or for database management.

**Parameters**

<i>options</i>	The options for the call.
----------------	---------------------------

**Returns**

The call object.

**7.17.3.76 database\_retrieve()** [2/2]

```
virtual grpc.AsyncDuplexStreamingCall<global.briar.BriarGrpc.DatabaseRetrieveRequest, global.↵
briar.BriarGrpc.DatabaseRetrieveReply> briar.BriarGrpc.BRIARService.BRIARServiceClient.↵
database_retrieve (
```

```

        grpc::Metadata headers = null,
        global::System.DateTime? deadline = null,
        global::System.Threading.CancellationToken cancellationToken = default(global::↵
:System.Threading.CancellationToken) ) [inline], [virtual]

```

OPTIONAL Clients can retrieve templates with metadata from a database for client side storage, processing, backup, or for database management.

#### Parameters

<i>headers</i>	The initial metadata to send with the call. This parameter is optional.
<i>deadline</i>	An optional deadline for the call. The call will be cancelled if deadline is hit.
<i>cancellationToken</i>	An optional token for canceling the call.

#### Returns

The call object.

#### 7.17.3.77 detect() [1/2]

```

virtual grpc.AsyncDuplexStreamingCall<global.briar.BriarGrpc.DetectRequest, global.briar.↵
BriarGrpc.DetectReply> briar.BriarGrpc.BRIARService.BRIARServiceClient.detect (
        grpc::CallOptions options ) [inline], [virtual]

```

REQUIRED Run detection on a media.

Optionally this can also run attribute classification and template extraction. Implementation should be similar to enroll but with nothing stored in a database.

#### Parameters

<i>options</i>	The options for the call.
----------------	---------------------------

#### Returns

The call object.

#### 7.17.3.78 detect() [2/2]

```

virtual grpc.AsyncDuplexStreamingCall<global.briar.BriarGrpc.DetectRequest, global.briar.↵
BriarGrpc.DetectReply> briar.BriarGrpc.BRIARService.BRIARServiceClient.detect (
        grpc::Metadata headers = null,
        global::System.DateTime? deadline = null,
        global::System.Threading.CancellationToken cancellationToken = default(global:↵
:System.Threading.CancellationToken) ) [inline], [virtual]

```

REQUIRED Run detection on a media.

Optionally this can also run attribute classification and template extraction. Implementation should be similar to enroll but with nothing stored in a database.

## Parameters

<i>headers</i>	The initial metadata to send with the call. This parameter is optional.
<i>deadline</i>	An optional deadline for the call. The call will be cancelled if deadline is hit.
<i>cancellationToken</i>	An optional token for canceling the call.

## Returns

The call object.

**7.17.3.79 enhance()** [1/2]

```
virtual grpc.AsyncDuplexStreamingCall<global.briar.BriarGrpc.EnhanceRequest, global.briar.↵
BriarGrpc.EnhanceReply> briar.BriarGrpc.BRIARService.BRIARServiceClient.enhance (
    grpc::CallOptions options ) [inline], [virtual]
```

OPTIONAL Enhance a media stream.

This takes a media stream as an input and return a media stream of enhanced video.

## Parameters

<i>options</i>	The options for the call.
----------------	---------------------------

## Returns

The call object.

**7.17.3.80 enhance()** [2/2]

```
virtual grpc.AsyncDuplexStreamingCall<global.briar.BriarGrpc.EnhanceRequest, global.briar.↵
BriarGrpc.EnhanceReply> briar.BriarGrpc.BRIARService.BRIARServiceClient.enhance (
    grpc::Metadata headers = null,
    global::System.DateTime? deadline = null,
    global::System.Threading.CancellationToken cancellationToken = default(global:↵
:System.Threading.CancellationToken) ) [inline], [virtual]
```

OPTIONAL Enhance a media stream.

This takes a media stream as an input and return a media stream of enhanced video.

## Parameters

<i>headers</i>	The initial metadata to send with the call. This parameter is optional.
<i>deadline</i>	An optional deadline for the call. The call will be cancelled if deadline is hit.
<i>cancellationToken</i>	An optional token for canceling the call.

**Returns**

The call object.

**7.17.3.81 enroll() [1/2]**

```
virtual grpc.AsyncDuplexStreamingCall<global.briar.BriarGrpc.EnrollRequest, global.briar.↵  
BriarGrpc.EnrollReply> briar.BriarGrpc.BRIARService.BRIARServiceClient.enroll (   
    grpc::CallOptions options ) [inline], [virtual]
```

REQUIRED FOR PHASE 1 EVALUATION Detect and extracts templates from media and enrolls the results in a database

**Parameters**

<i>options</i>	The options for the call.
----------------	---------------------------

**Returns**

The call object.

**7.17.3.82 enroll() [2/2]**

```
virtual grpc.AsyncDuplexStreamingCall<global.briar.BriarGrpc.EnrollRequest, global.briar.↵  
BriarGrpc.EnrollReply> briar.BriarGrpc.BRIARService.BRIARServiceClient.enroll (   
    grpc::Metadata headers = null,   
    global::System.DateTime? deadline = null,   
    global::System.Threading.CancellationToken cancellationToken = default(global:↵  
:System.Threading.CancellationToken) ) [inline], [virtual]
```

REQUIRED FOR PHASE 1 EVALUATION Detect and extracts templates from media and enrolls the results in a database

**Parameters**

<i>headers</i>	The initial metadata to send with the call. This parameter is optional.
<i>deadline</i>	An optional deadline for the call. The call will be cancelled if deadline is hit.
<i>cancellationToken</i>	An optional token for canceling the call.

**Returns**

The call object.

**7.17.3.83 enroll\_subject() [1/2]**

```
virtual grpc.AsyncDuplexStreamingCall<global.briar.BriarGrpc.EnrollRequest, global.briar.BriarGrpc.EnrollReply> briar.BriarGrpc.BRIARService.BRIARServiceClient.enroll_subject (
    grpc::CallOptions options ) [inline], [virtual]
```

DEPRECATED for use only with legacy systems

**Parameters**

<i>options</i>	The options for the call.
----------------	---------------------------

**Returns**

The call object.

**7.17.3.84 enroll\_subject() [2/2]**

```
virtual grpc.AsyncDuplexStreamingCall<global.briar.BriarGrpc.EnrollRequest, global.briar.BriarGrpc.EnrollReply> briar.BriarGrpc.BRIARService.BRIARServiceClient.enroll_subject (
    grpc::Metadata headers = null,
    global::System.DateTime? deadline = null,
    global::System.Threading.CancellationToken cancellationToken = default(global::System.Threading.CancellationToken) ) [inline], [virtual]
```

DEPRECATED for use only with legacy systems

**Parameters**

<i>headers</i>	The initial metadata to send with the call. This parameter is optional.
<i>deadline</i>	An optional deadline for the call. The call will be cancelled if deadline is hit.
<i>cancellationToken</i>	An optional token for canceling the call.

**Returns**

The call object.

**7.17.3.85 extract() [1/2]**

```
virtual grpc.AsyncDuplexStreamingCall<global.briar.BriarGrpc.ExtractRequest, global.briar.BriarGrpc.ExtractReply> briar.BriarGrpc.BRIARService.BRIARServiceClient.extract (
    grpc::CallOptions options ) [inline], [virtual]
```

REQUIRED Run feature extraction on the provided detection.

## Parameters

<i>options</i>	The options for the call.
----------------	---------------------------

## Returns

The call object.

**7.17.3.86 extract()** [2/2]

```
virtual grpc::AsyncDuplexStreamingCall<global.briar.BriarGrpc.ExtractRequest, global.briar.↵
BriarGrpc.ExtractReply> briar.BriarGrpc.BRIARService.BRIARServiceClient.extract (
    grpc::Metadata headers = null,
    global::System.DateTime? deadline = null,
    global::System.Threading.CancellationToken cancellationToken = default(global:↵
:System.Threading.CancellationToken) ) [inline], [virtual]
```

REQUIRED Run feature extraction on the provided detection.

## Parameters

<i>headers</i>	The initial metadata to send with the call. This parameter is optional.
<i>deadline</i>	An optional deadline for the call. The call will be cancelled if deadline is hit.
<i>cancellationToken</i>	An optional token for canceling the call.

## Returns

The call object.

**7.17.3.87 get\_service\_configuration()** [1/2]

```
virtual global.briar.BriarGrpc.BriarServiceConfigurationReply briar.BriarGrpc.BRIARService.↵
BRIARServiceClient.get_service_configuration (
    global::briar.BriarGrpc.BriarServiceConfigurationRequest request,
    grpc::CallOptions options ) [inline], [virtual]
```

**7.17.3.88 get\_service\_configuration()** [2/2]

```
virtual global.briar.BriarGrpc.BriarServiceConfigurationReply briar.BriarGrpc.BRIARService.↵
BRIARServiceClient.get_service_configuration (
    global::briar.BriarGrpc.BriarServiceConfigurationRequest request,
    grpc::Metadata headers = null,
    global::System.DateTime? deadline = null,
    global::System.Threading.CancellationToken cancellationToken = default(global:↵
:System.Threading.CancellationToken) ) [inline], [virtual]
```

**7.17.3.89 get\_service\_configurationAsync() [1/2]**

```
virtual grpc.AsyncUnaryCall<global.briar.BriarGrpc.BriarServiceConfigurationReply> briar.↵
BriarGrpc.BRIARService.BRIARServiceClient.get_service_configurationAsync (
    global::briar.BriarGrpc.BriarServiceConfigurationRequest request,
    grpc::CallOptions options ) [inline], [virtual]
```

**7.17.3.90 get\_service\_configurationAsync() [2/2]**

```
virtual grpc.AsyncUnaryCall<global.briar.BriarGrpc.BriarServiceConfigurationReply> briar.↵
BriarGrpc.BRIARService.BRIARServiceClient.get_service_configurationAsync (
    global::briar.BriarGrpc.BriarServiceConfigurationRequest request,
    grpc::Metadata headers = null,
    global::System.DateTime? deadline = null,
    global::System.Threading.CancellationToken cancellationToken = default(global.↵
:System.Threading.CancellationToken) ) [inline], [virtual]
```

**7.17.3.91 NewInstance()**

```
override BRIARServiceClient briar.BriarGrpc.BRIARService.BRIARServiceClient.NewInstance (
    ClientBaseConfiguration configuration ) [inline], [protected]
```

Creates a new instance of client from given ClientBaseConfiguration.

**7.17.3.92 search() [1/2]**

```
virtual grpc.AsyncDuplexStreamingCall<global.briar.BriarGrpc.SearchRequest, global.briar.↵
BriarGrpc.SearchReply> briar.BriarGrpc.BRIARService.BRIARServiceClient.search (
    grpc::CallOptions options ) [inline], [virtual]
```

REQUIRED Use provided template ids to search a database for that person.

Return a rank ordered list of results with scores.

**Parameters**

<i>options</i>	The options for the call.
----------------	---------------------------

**Returns**

The call object.

**7.17.3.93 search()** [2/2]

```
virtual grpc.AsyncDuplexStreamingCall<global.briar.BriarGrpc.SearchRequest, global.briar.↵
BriarGrpc.SearchReply> briar.BriarGrpc.BRIARService.BRIARServiceClient.search (
    grpc::Metadata headers = null,
    global::System.DateTime? deadline = null,
    global::System.Threading.CancellationToken cancellationToken = default(global:↵
:System.Threading.CancellationToken) ) [inline], [virtual]
```

REQUIRED Use provided template ids to search a database for that person.

Return a rank ordered list of results with scores.

**Parameters**

<i>headers</i>	The initial metadata to send with the call. This parameter is optional.
<i>deadline</i>	An optional deadline for the call. The call will be cancelled if deadline is hit.
<i>cancellationToken</i>	An optional token for canceling the call.

**Returns**

The call object.

**7.17.3.94 sigset\_enroll\_custom()** [1/2]

```
virtual grpc.AsyncServerStreamingCall<global.briar.BriarGrpc.EnrollReply> briar.BriarGrpc.↵
BRIARService.BRIARServiceClient.sigset_enroll_custom (
    global::briar.BriarGrpc.EnrollCustomRequest request,
    grpc::CallOptions options ) [inline], [virtual]
```

OPTIONAL FOR PHASE 1 EVALUATION, NOT FOR GENERAL PURPOSE USE

**Parameters**

<i>request</i>	The request to send to the server.
<i>options</i>	The options for the call.

**Returns**

The call object.

**7.17.3.95 sigset\_enroll\_custom()** [2/2]

```
virtual grpc.AsyncServerStreamingCall<global.briar.BriarGrpc.EnrollReply> briar.BriarGrpc.↵
BRIARService.BRIARServiceClient.sigset_enroll_custom (
```

```

        global::briar.BriarGrpc.EnrollCustomRequest request,
        grpc::Metadata headers = null,
        global::System.DateTime? deadline = null,
        global::System.Threading.CancellationToken cancellationToken = default(global::System.Threading.CancellationToken) ) [inline], [virtual]

```

#### OPTIONAL FOR PHASE 1 EVALUATION, NOT FOR GENERAL PURPOSE USE

##### Parameters

<i>request</i>	The request to send to the server.
<i>headers</i>	The initial metadata to send with the call. This parameter is optional.
<i>deadline</i>	An optional deadline for the call. The call will be cancelled if deadline is hit.
<i>cancellationToken</i>	An optional token for canceling the call.

##### Returns

The call object.

#### 7.17.3.96 status() [1/2]

```

virtual global.briar.BriarGrpc.StatusReply briar.BriarGrpc.BRIARService.BRIARServiceClient.<-
status (
    global::briar.BriarGrpc.StatusRequest request,
    grpc::CallOptions options ) [inline], [virtual]

```

REQUIRED Check service status.

After connecting clients should typically call this function to insure that the service is in the READY state.

##### Parameters

<i>request</i>	The request to send to the server.
<i>options</i>	The options for the call.

##### Returns

The response received from the server.

#### 7.17.3.97 status() [2/2]

```

virtual global.briar.BriarGrpc.StatusReply briar.BriarGrpc.BRIARService.BRIARServiceClient.<-
status (
    global::briar.BriarGrpc.StatusRequest request,
    grpc::Metadata headers = null,

```

```

        global::System.DateTime? deadline = null,
        global::System.Threading.CancellationToken cancellationToken = default(global::System.Threading.CancellationToken) ) [inline], [virtual]

```

REQUIRED Check service status.

After connecting clients should typically call this function to insure that the service is in the READY state.

#### Parameters

<i>request</i>	The request to send to the server.
<i>headers</i>	The initial metadata to send with the call. This parameter is optional.
<i>deadline</i>	An optional deadline for the call. The call will be cancelled if deadline is hit.
<i>cancellationToken</i>	An optional token for canceling the call.

#### Returns

The response received from the server.

### 7.17.3.98 statusAsync() [1/2]

```

virtual grpc.AsyncUnaryCall<global.briar.BriarGrpc.StatusReply> briar.BriarGrpc.BRIARService.BRIARServiceClient.statusAsync (
    global::briar.BriarGrpc.StatusRequest request,
    grpc::CallOptions options ) [inline], [virtual]

```

REQUIRED Check service status.

After connecting clients should typically call this function to insure that the service is in the READY state.

#### Parameters

<i>request</i>	The request to send to the server.
<i>options</i>	The options for the call.

#### Returns

The call object.

### 7.17.3.99 statusAsync() [2/2]

```

virtual grpc.AsyncUnaryCall<global.briar.BriarGrpc.StatusReply> briar.BriarGrpc.BRIARService.BRIARServiceClient.statusAsync (
    global::briar.BriarGrpc.StatusRequest request,
    grpc::Metadata headers = null,

```

```

        global::System.DateTime? deadline = null,
        global::System.Threading.CancellationToken cancellationToken = default(global::System.Threading.CancellationToken) ) [inline], [virtual]

```

REQUIRED Check service status.

After connecting clients should typically call this function to insure that the service is in the READY state.

#### Parameters

<i>request</i>	The request to send to the server.
<i>headers</i>	The initial metadata to send with the call. This parameter is optional.
<i>deadline</i>	An optional deadline for the call. The call will be cancelled if deadline is hit.
<i>cancellationToken</i>	An optional token for canceling the call.

#### Returns

The call object.

#### 7.17.3.100 track() [1/2]

```

virtual grpc.AsyncDuplexStreamingCall<global.briar.BriarGrpc.TrackRequest, global.briar.BriarGrpc.TrackReply> briar.BriarGrpc.BRIARService.BRIARServiceClient.track (
    grpc::CallOptions options ) [inline], [virtual]

```

OPTIONAL To run tracking on video media.

#### Parameters

<i>options</i>	The options for the call.
----------------	---------------------------

#### Returns

The call object.

#### 7.17.3.101 track() [2/2]

```

virtual grpc.AsyncDuplexStreamingCall<global.briar.BriarGrpc.TrackRequest, global.briar.BriarGrpc.TrackReply> briar.BriarGrpc.BRIARService.BRIARServiceClient.track (
    grpc::Metadata headers = null,
    global::System.DateTime? deadline = null,
    global::System.Threading.CancellationToken cancellationToken = default(global::System.Threading.CancellationToken) ) [inline], [virtual]

```

OPTIONAL To run tracking on video media.

## Parameters

<i>headers</i>	The initial metadata to send with the call. This parameter is optional.
<i>deadline</i>	An optional deadline for the call. The call will be cancelled if deadline is hit.
<i>cancellationToken</i>	An optional token for canceling the call.

## Returns

The call object.

**7.17.3.102 verify()** [1/2]

```
virtual grpc.AsyncClientStreamingCall<global.briar.BriarGrpc.VerifyRequest, global.briar.BriarGrpc.VerifyReply> briar.BriarGrpc.BRIARService.BRIARServiceClient.verify (
    grpc::CallOptions options ) [inline], [virtual]
```

REQUIRED Compare two template ids and verify if they are the same person.

## Parameters

<i>options</i>	The options for the call.
----------------	---------------------------

## Returns

The call object.

**7.17.3.103 verify()** [2/2]

```
virtual grpc.AsyncClientStreamingCall<global.briar.BriarGrpc.VerifyRequest, global.briar.BriarGrpc.VerifyReply> briar.BriarGrpc.BRIARService.BRIARServiceClient.verify (
    grpc::Metadata headers = null,
    global::System.DateTime? deadline = null,
    global::System.Threading.CancellationToken cancellationToken = default(global::System.Threading.CancellationToken) ) [inline], [virtual]
```

REQUIRED Compare two template ids and verify if they are the same person.

## Parameters

<i>headers</i>	The initial metadata to send with the call. This parameter is optional.
<i>deadline</i>	An optional deadline for the call. The call will be cancelled if deadline is hit.
<i>cancellationToken</i>	An optional token for canceling the call.

**Returns**

The call object.

### 7.18.1 Constructor & Destructor Documentation

### 7.18.1.1 BriarServiceConfigurationReply() [1/2]

```
briar.BriarGrpc.BriarServiceConfigurationReply.BriarServiceConfigurationReply ( ) [inline]
```

### 7.18.1.2 BriarServiceConfigurationReply() [2/2]

```
briar.BriarGrpc.BriarServiceConfigurationReply.BriarServiceConfigurationReply (
    BriarServiceConfigurationReply other ) [inline]
```

## 7.18.2 Member Function Documentation

### 7.18.2.1 CalculateSize()

```
int briar.BriarGrpc.BriarServiceConfigurationReply.CalculateSize ( ) [inline]
```

### 7.18.2.2 Clone()

```
BriarServiceConfigurationReply briar.BriarGrpc.BriarServiceConfigurationReply.Clone ( ) [inline]
```

### 7.18.2.3 Equals() [1/2]

```
bool briar.BriarGrpc.BriarServiceConfigurationReply.Equals (
    BriarServiceConfigurationReply other ) [inline]
```

### 7.18.2.4 Equals() [2/2]

```
override bool briar.BriarGrpc.BriarServiceConfigurationReply.Equals (
    object other ) [inline]
```

### 7.18.2.5 GetHashCode()

```
override int briar.BriarGrpc.BriarServiceConfigurationReply.GetHashCode ( ) [inline]
```

#### 7.18.2.6 MergeFrom() [1/2]

```
void briar.BriarGrpc.BriarServiceConfigurationReply.MergeFrom (
    BriarServiceConfigurationReply other ) [inline]
```

#### 7.18.2.7 MergeFrom() [2/2]

```
void briar.BriarGrpc.BriarServiceConfigurationReply.MergeFrom (
    pb::CodedInputStream input ) [inline]
```

#### 7.18.2.8 ToString()

```
override string briar.BriarGrpc.BriarServiceConfigurationReply.ToString ( ) [inline]
```

#### 7.18.2.9 WriteTo()

```
void briar.BriarGrpc.BriarServiceConfigurationReply.WriteTo (
    pb::CodedOutputStream output ) [inline]
```

### 7.18.3 Member Data Documentation

#### 7.18.3.1 BasePortFieldNumber

```
const int briar.BriarGrpc.BriarServiceConfigurationReply.BasePortFieldNumber = 5 [static]
```

Field number for the "base\_port" field.

#### 7.18.3.2 NumberOfProcessesPerPortFieldNumber

```
const int briar.BriarGrpc.BriarServiceConfigurationReply.NumberOfProcessesPerPortFieldNumber =
2 [static]
```

Field number for the "number\_of\_processes\_per\_port" field.

### 7.18.3.3 NumberOfServicePortsFieldNumber

```
const int briar.BriarGrpc.BriarServiceConfigurationReply.NumberOfServicePortsFieldNumber = 1
[static]
```

Field number for the "number\_of\_service\_ports" field.

### 7.18.3.4 NumberOfThreadsPerProcessFieldNumber

```
const int briar.BriarGrpc.BriarServiceConfigurationReply.NumberOfThreadsPerProcessFieldNumber
= 3 [static]
```

Field number for the "number\_of\_threads\_per\_process" field.

### 7.18.3.5 PortListFieldNumber

```
const int briar.BriarGrpc.BriarServiceConfigurationReply.PortListFieldNumber = 6 [static]
```

Field number for the "port\_list" field.

### 7.18.3.6 ReportingProcessNumberFieldNumber

```
const int briar.BriarGrpc.BriarServiceConfigurationReply.ReportingProcessNumberFieldNumber = 4
[static]
```

Field number for the "reporting\_process\_number" field.

## 7.18.4 Property Documentation

### 7.18.4.1 BasePort

```
string briar.BriarGrpc.BriarServiceConfigurationReply.BasePort [get], [set]
```

REQUIRED: the base port we should use as point-of-contact for main API calls.

If you have a single service, this is your services port

#### 7.18.4.2 Descriptor

```
pbr.MessageDescriptor briar.BriarGrpc.BriarServiceConfigurationReply.Descriptor [static],
[get]
```

#### 7.18.4.3 NumberOfProcessesPerPort

```
int briar.BriarGrpc.BriarServiceConfigurationReply.NumberOfProcessesPerPort [get], [set]
```

REQUIRED: the amount of simultaneous processes that are running on each port (python processes dont share resources, they fork them)

#### 7.18.4.4 NumberOfServicePorts

```
int briar.BriarGrpc.BriarServiceConfigurationReply.NumberOfServicePorts [get], [set]
```

REQUIRED: the amount of different addresses your system will be using (e.g.

2 if using localhost:50051 and 50052)

#### 7.18.4.5 NumberOfThreadsPerProcess

```
int briar.BriarGrpc.BriarServiceConfigurationReply.NumberOfThreadsPerProcess [get], [set]
```

REQUIRED: the amount of simultaneous threads running within each process (python threads do usually share reesources, but are constrained by the GIL)

#### 7.18.4.6 Parser

```
pb.MessageParser<BriarServiceConfigurationReply> briar.BriarGrpc.BriarServiceConfiguration←
Reply.Parser [static], [get]
```

#### 7.18.4.7 PortList

```
pbc.RepeatedField<string> briar.BriarGrpc.BriarServiceConfigurationReply.PortList [get]
```

Required: the list of ports that are running your services.

If you have a single service, this will contain just the base port.

#### 7.18.4.8 ReportingProcessNumber

```
int briar.BriarGrpc.BriarServiceConfigurationReply.ReportingProcessNumber [get], [set]
```

REQUIRED: the process PID that is reporting this request

## 7.23.1 Constructor & Destructor Documentation

### 7.23.1.1 ClusterReply() [1/2]

```
briar.BriarGrpc.ClusterReply.ClusterReply ( ) [inline]
```

### 7.23.1.2 ClusterReply() [2/2]

```
briar.BriarGrpc.ClusterReply.ClusterReply (
    ClusterReply other ) [inline]
```

## 7.23.2 Member Function Documentation

### 7.23.2.1 CalculateSize()

```
int briar.BriarGrpc.ClusterReply.CalculateSize ( ) [inline]
```

### 7.23.2.2 Clone()

```
ClusterReply briar.BriarGrpc.ClusterReply.Clone ( ) [inline]
```

### 7.23.2.3 Equals() [1/2]

```
bool briar.BriarGrpc.ClusterReply.Equals (
    ClusterReply other ) [inline]
```

### 7.23.2.4 Equals() [2/2]

```
override bool briar.BriarGrpc.ClusterReply.Equals (
    object other ) [inline]
```

### 7.23.2.5 GetHashCode()

```
override int briar.BriarGrpc.ClusterReply.GetHashCode ( ) [inline]
```

### 7.23.2.6 MergeFrom() [1/2]

```
void briar.BriarGrpc.ClusterReply.MergeFrom (
    ClusterReply other ) [inline]
```

### 7.23.2.7 MergeFrom() [2/2]

```
void briar.BriarGrpc.ClusterReply.MergeFrom (
    pb::CodedInputStream input ) [inline]
```

### 7.23.2.8 ToString()

```
override string briar.BriarGrpc.ClusterReply.ToString ( ) [inline]
```

### 7.23.2.9 WriteTo()

```
void briar.BriarGrpc.ClusterReply.WriteTo (
    pb::CodedOutputStream output ) [inline]
```

## 7.23.3 Member Data Documentation

### 7.23.3.1 ClusterConfidencesFieldNumber

```
const int briar.BriarGrpc.ClusterReply.ClusterConfidencesFieldNumber = 2 [static]
```

Field number for the "cluster\_confidences" field.

### 7.23.3.2 ClusterIdsFieldNumber

```
const int briar.BriarGrpc.ClusterReply.ClusterIdsFieldNumber = 1 [static]
```

Field number for the "cluster\_ids" field.

### 7.23.3.3 DurationsFieldNumber

```
const int briar.BriarGrpc.ClusterReply.DurationsFieldNumber = 3 [static]
```

Field number for the "durations" field.

### 7.23.3.4 ErrorsFieldNumber

```
const int briar.BriarGrpc.ClusterReply.ErrorsFieldNumber = 4 [static]
```

Field number for the "errors" field.

### 7.23.3.5 ProgressFieldName

```
const int briar.BriarGrpc.ClusterReply.ProgressFieldName = 5 [static]
```

Field number for the "progress" field.

## 7.23.4 Property Documentation

### 7.23.4.1 ClusterConfidences

```
pbc.RepeatedField<global.briar.BriarGrpc.ClusterConfidence> briar.BriarGrpc.ClusterReply.ClusterConfidences [get]
```

UNIMPLEMENTED: List of the cluster confidences

### 7.23.4.2 ClusterIds

```
pbc.RepeatedField<global.briar.BriarGrpc.ClusterIds> briar.BriarGrpc.ClusterReply.ClusterIds [get]
```

UNIMPLEMENTED: List of clustered ids

### 7.23.4.3 Descriptor

```
pbr.MessageDescriptor briar.BriarGrpc.ClusterReply.Descriptor [static], [get]
```

### 7.23.4.4 Durations

```
global.briar.BriarGrpc.BriarDurations briar.BriarGrpc.ClusterReply.Durations [get], [set]
```

UNIMPLEMENTED: Log the time needed to complete the request on the server

### 7.23.4.5 Errors

```
global.briar.BriarGrpc.BriarErrors briar.BriarGrpc.ClusterReply.Errors [get], [set]
```

UNIMPLEMENTED: Indicate any errors or warnings.

#### 7.23.4.6 Parser

```
pb.MessageParser<ClusterReply> briar.BriarGrpc.ClusterReply.Parser [static], [get]
```

#### 7.23.4.7 Progress

```
global.briar.BriarGrpc.BriarProgress briar.BriarGrpc.ClusterReply.Progress [get], [set]
```

UNIMPLEMENTED:: provides progress updates for progress bar display.

    pb::CodedOutputStream output ) [inline]
```

## 7.28.3 Member Data Documentation

### 7.28.3.1 DurationsFieldNumber

```
const int briar.BriarGrpc.DatabaseCreateReply.DurationsFieldNumber = 2 [static]
```

Field number for the "durations" field.

### 7.28.3.2 ErrorsFieldName

```
const int briar.BriarGrpc.DatabaseCreateReply.ErrorsFieldName = 3 [static]
```

Field number for the "errors" field.

### 7.28.3.3 IdsFieldName

```
const int briar.BriarGrpc.DatabaseCreateReply.IdsFieldName = 1 [static]
```

Field number for the "ids" field.

## 7.28.4 Property Documentation

### 7.28.4.1 Descriptor

```
pbr.MessageDescriptor briar.BriarGrpc.DatabaseCreateReply.Descriptor [static], [get]
```

### 7.28.4.2 Durations

```
global.briar.BriarGrpc.BriarDurations briar.BriarGrpc.DatabaseCreateReply.Durations [get],  
[set]
```

Log the time needed to complete the request on the server

### 7.28.4.3 Errors

```
global.briar.BriarGrpc.BriarErrors briar.BriarGrpc.DatabaseCreateReply.Errors [get], [set]
```

### 7.28.4.4 Ids

```
global.briar.BriarGrpc.TemplateIds briar.BriarGrpc.DatabaseCreateReply.Ids [get], [set]
```

OPTIONAL: template IDs that new database has been created with

#### 7.28.4.5 Parser

```
pb.MessageParser<DatabaseCreateReply> briar.BriarGrpc.DatabaseCreateReply.Parser [static],  
[get]
```

## Public Member Functions

- `int CalculateSize ()`
- `DatabaseHasEntryReply Clone ()`
- `DatabaseHasEntryReply ()`
- `DatabaseHasEntryReply (DatabaseHasEntryReply other)`
- `bool Equals (DatabaseHasEntryReply other)`
- `override bool Equals (object other)`
- `override int GetHashCode ()`
- `void MergeFrom (DatabaseHasEntryReply other)`
- `void MergeFrom (pb::CodedInputStream input)`
- `override string ToString ()`
- `void WriteTo (pb::CodedOutputStream output)`

## Static Public Attributes

- `const int ExistsFieldNumber = 1`  
*Field number for the "exists" field.*
- `const int IsCompleteFieldNumber = 2`  
*Field number for the "is\_complete" field.*
- `const int ProgressFieldNumber = 3`  
*Field number for the "progress" field.*

## Properties

- `static pbr::MessageDescriptor Descriptor [get]`
- `bool Exists [get, set]`
- `bool IsComplete [get, set]`
- `static pb::MessageParser< DatabaseHasEntryReply > Parser [get]`
- `global::briar.BriarGrpc.BriarProgress Progress [get, set]`

### 7.34.1 Constructor & Destructor Documentation

### 7.34.1.1 DatabaseHasEntryReply() [1/2]

```
briar.BriarGrpc.DatabaseHasEntryReply.DatabaseHasEntryReply ( ) [inline]
```

### 7.34.1.2 DatabaseHasEntryReply() [2/2]

```
briar.BriarGrpc.DatabaseHasEntryReply.DatabaseHasEntryReply (
    DatabaseHasEntryReply other ) [inline]
```

## 7.34.2 Member Function Documentation

### 7.34.2.1 CalculateSize()

```
int briar.BriarGrpc.DatabaseHasEntryReply.CalculateSize ( ) [inline]
```

### 7.34.2.2 Clone()

```
DatabaseHasEntryReply briar.BriarGrpc.DatabaseHasEntryReply.Clone ( ) [inline]
```

### 7.34.2.3 Equals() [1/2]

```
bool briar.BriarGrpc.DatabaseHasEntryReply.Equals (
    DatabaseHasEntryReply other ) [inline]
```

### 7.34.2.4 Equals() [2/2]

```
override bool briar.BriarGrpc.DatabaseHasEntryReply.Equals (
    object other ) [inline]
```

### 7.34.2.5 GetHashCode()

```
override int briar.BriarGrpc.DatabaseHasEntryReply.GetHashCode ( ) [inline]
```

#### 7.34.2.6 MergeFrom() [1/2]

```
void briar.BriarGrpc.DatabaseHasEntryReply.MergeFrom (
    DatabaseHasEntryReply other ) [inline]
```

#### 7.34.2.7 MergeFrom() [2/2]

```
void briar.BriarGrpc.DatabaseHasEntryReply.MergeFrom (
    pb::CodedInputStream input ) [inline]
```

#### 7.34.2.8 ToString()

```
override string briar.BriarGrpc.DatabaseHasEntryReply.ToString ( ) [inline]
```

#### 7.34.2.9 WriteTo()

```
void briar.BriarGrpc.DatabaseHasEntryReply.WriteTo (
    pb::CodedOutputStream output ) [inline]
```

### 7.34.3 Member Data Documentation

#### 7.34.3.1 ExistsFieldNumber

```
const int briar.BriarGrpc.DatabaseHasEntryReply.ExistsFieldNumber = 1 [static]
```

Field number for the "exists" field.

#### 7.34.3.2 IsCompleteFieldNumber

```
const int briar.BriarGrpc.DatabaseHasEntryReply.IsCompleteFieldNumber = 2 [static]
```

Field number for the "is\_complete" field.

### 7.34.3.3 ProgressFieldName

```
const int briar.BriarGrpc.DatabaseHasEntryReply.ProgressFieldName = 3 [static]
```

Field number for the "progress" field.

## 7.34.4 Property Documentation

### 7.34.4.1 Descriptor

```
pbr.MessageDescriptor briar.BriarGrpc.DatabaseHasEntryReply.Descriptor [static], [get]
```

### 7.34.4.2 Exists

```
bool briar.BriarGrpc.DatabaseHasEntryReply.Exists [get], [set]
```

### 7.34.4.3 IsComplete

```
bool briar.BriarGrpc.DatabaseHasEntryReply.IsComplete [get], [set]
```

### 7.34.4.4 Parser

```
pb.MessageParser<DatabaseHasEntryReply> briar.BriarGrpc.DatabaseHasEntryReply.Parser [static],  
[get]
```

### 7.34.4.5 Progress

```
global.briar.BriarGrpc.BriarProgress briar.BriarGrpc.DatabaseHasEntryReply.Progress [get],  
[set]
```

```
bool briar.BriarGrpc.DatabaseInfoReply.Equals (
    DatabaseInfoReply other ) [inline]
```

### 7.36.2.4 Equals() [2/2]

```
override bool briar.BriarGrpc.DatabaseInfoReply.Equals (
    object other ) [inline]
```

### 7.36.2.5 GetHashCode()

```
override int briar.BriarGrpc.DatabaseInfoReply.GetHashCode ( ) [inline]
```

### 7.36.2.6 MergeFrom() [1/2]

```
void briar.BriarGrpc.DatabaseInfoReply.MergeFrom (
    DatabaseInfoReply other ) [inline]
```

### 7.36.2.7 MergeFrom() [2/2]

```
void briar.BriarGrpc.DatabaseInfoReply.MergeFrom (
    pb::CodedInputStream input ) [inline]
```

### 7.36.2.8 ToString()

```
override string briar.BriarGrpc.DatabaseInfoReply.ToString ( ) [inline]
```

### 7.36.2.9 WriteTo()

```
void briar.BriarGrpc.DatabaseInfoReply.WriteTo (
    pb::CodedOutputStream output ) [inline]
```

## 7.36.3 Member Data Documentation

### 7.36.3.1 DurationFieldNumber

```
const int briar.BriarGrpc.DatabaseInfoReply.DurationFieldNumber = 2 [static]
```

Field number for the "duration" field.

### 7.36.3.2 ExistsFieldNumber

```
const int briar.BriarGrpc.DatabaseInfoReply.ExistsFieldNumber = 3 [static]
```

Field number for the "exists" field.

### 7.36.3.3 InfoFieldNumber

```
const int briar.BriarGrpc.DatabaseInfoReply.InfoFieldNumber = 1 [static]
```

Field number for the "info" field.

## 7.36.4 Property Documentation

### 7.36.4.1 Descriptor

```
pbr.MessageDescriptor briar.BriarGrpc.DatabaseInfoReply.Descriptor [static], [get]
```

### 7.36.4.2 Duration

```
global.briar.BriarGrpc.BriarDurations briar.BriarGrpc.DatabaseInfoReply.Duration [get], [set]
```

Log the time needed to complete the request on the server

### 7.36.4.3 Exists

```
bool briar.BriarGrpc.DatabaseInfoReply.Exists [get], [set]
```

REQUIRED: set to true if the requested database exists and the reply is populated correctly

### 7.36.4.4 Info

```
global.briar.BriarGrpc.BriarDatabaseInfo briar.BriarGrpc.DatabaseInfoReply.Info [get], [set]
```

REQUIRED Contains the information about the database

### 7.36.4.5 Parser

```
pb.MessageParser<DatabaseInfoReply> briar.BriarGrpc.DatabaseInfoReply.Parser [static], [get]
```

```
void briar.BriarGrpc.DatabaseInsertRequest.MergeFrom (
    DatabaseInsertRequest other ) [inline]
```

### 7.39.2.7 MergeFrom() [2/2]

```
void briar.BriarGrpc.DatabaseInsertRequest.MergeFrom (
    pb::CodedInputStream input ) [inline]
```

### 7.39.2.8 ToString()

```
override string briar.BriarGrpc.DatabaseInsertRequest.ToString ( ) [inline]
```

### 7.39.2.9 WriteTo()

```
void briar.BriarGrpc.DatabaseInsertRequest.WriteTo (
    pb::CodedOutputStream output ) [inline]
```

## 7.39.3 Member Data Documentation

### 7.39.3.1 DatabaseFieldNumber

```
const int briar.BriarGrpc.DatabaseInsertRequest.DatabaseFieldNumber = 1 [static]
```

Field number for the "database" field.

### 7.39.3.2 DurationsFieldNumber

```
const int briar.BriarGrpc.DatabaseInsertRequest.DurationsFieldNumber = 4 [static]
```

Field number for the "durations" field.

### 7.39.3.3 IdsFieldNumber

```
const int briar.BriarGrpc.DatabaseInsertRequest.IdsFieldNumber = 3 [static]
```

Field number for the "ids" field.

#### 7.39.3.4 TmplsFieldNumber

```
const int briar.BriarGrpc.DatabaseInsertRequest.TmplsFieldNumber = 2 [static]
```

Field number for the "tmpls" field.

### 7.39.4 Property Documentation

#### 7.39.4.1 Database

```
global.briar.BriarGrpc.BriarDatabase briar.BriarGrpc.DatabaseInsertRequest.Database [get],  
[set]
```

OPTIONAL: Database to batch insert into

#### 7.39.4.2 Descriptor

```
pbr.MessageDescriptor briar.BriarGrpc.DatabaseInsertRequest.Descriptor [static], [get]
```

#### 7.39.4.3 Durations

```
global.briar.BriarGrpc.BriarDurations briar.BriarGrpc.DatabaseInsertRequest.Durations [get],  
[set]
```

OPTIONAL: Log the time needed to complete the request on the server

#### 7.39.4.4 Ids

```
global.briar.BriarGrpc.TemplateIds briar.BriarGrpc.DatabaseInsertRequest.Ids [get], [set]
```

OPTIONAL: IDs of templates to insert

#### 7.39.4.5 Parser

```
pb.MessageParser<DatabaseInsertRequest> briar.BriarGrpc.DatabaseInsertRequest.Parser [static],  
[get]
```

#### 7.39.4.6 Tmpls

`global.briar.BriarGrpc.TemplateList briar.BriarGrpc.DatabaseInsertRequest.Tmpls [get], [set]`

OPTIONAL: Templates to insert

    pb::CodedInputStream input ) [inline]
```

#### 7.40.2.8 ToString()

```
override string briar.BriarGrpc.DatabaseListentriesReply.ToString ( ) [inline]
```

#### 7.40.2.9 WriteTo()

```
void briar.BriarGrpc.DatabaseListentriesReply.WriteTo (
    pb::CodedOutputStream output ) [inline]
```

### 7.40.3 Member Data Documentation

#### 7.40.3.1 DurationsFieldNumber

```
const int briar.BriarGrpc.DatabaseListentriesReply.DurationsFieldNumber = 3 [static]
```

Field number for the "durations" field.

#### 7.40.3.2 EntryAttributesFieldNumber

```
const int briar.BriarGrpc.DatabaseListentriesReply.EntryAttributesFieldNumber = 2 [static]
```

Field number for the "entry\_attributes" field.

#### 7.40.3.3 EntryIdsFieldNumber

```
const int briar.BriarGrpc.DatabaseListentriesReply.EntryIdsFieldNumber = 1 [static]
```

Field number for the "entry\_ids" field.

### 7.40.3.4 ExistsFieldNumber

```
const int briar.BriarGrpc.DatabaseListentriesReply.ExistsFieldNumber = 4 [static]
```

Field number for the "exists" field.

## 7.40.4 Property Documentation

### 7.40.4.1 Descriptor

```
pbr.MessageDescriptor briar.BriarGrpc.DatabaseListentriesReply.Descriptor [static], [get]
```

### 7.40.4.2 Durations

```
global.briar.BriarGrpc.BriarDurations briar.BriarGrpc.DatabaseListentriesReply.Durations [get],  
[set]
```

Duration of retrieving entries

### 7.40.4.3 EntryAttributes

```
pbc.RepeatedField<global.briar.BriarGrpc.FrameMetadata> briar.BriarGrpc.DatabaseListentriesReply.EntryAttributes [get]
```

List of attributes for each entry

### 7.40.4.4 EntryIds

```
pbc.RepeatedField<string> briar.BriarGrpc.DatabaseListentriesReply.EntryIds [get]
```

REQUIRED List of entry IDs for the given database

### 7.40.4.5 Exists

```
bool briar.BriarGrpc.DatabaseListentriesReply.Exists [get], [set]
```

Flag defining if the requested database exists

#### 7.40.4.6 Parser

```
pb.MessageParser<DatabaseListEntriesReply> briar.BriarGrpc.DatabaseListEntriesReply.Parser  
[static], [get]
```

The documentation for this class was generated from the following file:

## 7.45.1 Constructor & Destructor Documentation

### 7.45.1.1 DatabaseLoadRequest() [1/2]

```
briar.BriarGrpc.DatabaseLoadRequest.DatabaseLoadRequest ( ) [inline]
```

### 7.45.1.2 DatabaseLoadRequest() [2/2]

```
briar.BriarGrpc.DatabaseLoadRequest.DatabaseLoadRequest (
    DatabaseLoadRequest other ) [inline]
```

## 7.45.2 Member Function Documentation

### 7.45.2.1 CalculateSize()

```
int briar.BriarGrpc.DatabaseLoadRequest.CalculateSize ( ) [inline]
```

### 7.45.2.2 Clone()

```
DatabaseLoadRequest briar.BriarGrpc.DatabaseLoadRequest.Clone ( ) [inline]
```

### 7.45.2.3 Equals() [1/2]

```
bool briar.BriarGrpc.DatabaseLoadRequest.Equals (
    DatabaseLoadRequest other ) [inline]
```

### 7.45.2.4 Equals() [2/2]

```
override bool briar.BriarGrpc.DatabaseLoadRequest.Equals (
    object other ) [inline]
```

### 7.45.2.5 GetHashCode()

```
override int briar.BriarGrpc.DatabaseLoadRequest.GetHashCode ( ) [inline]
```

### 7.45.2.6 MergeFrom() [1/2]

```
void briar.BriarGrpc.DatabaseLoadRequest.MergeFrom (
    DatabaseLoadRequest other ) [inline]
```

#### 7.45.2.7 MergeFrom() [2/2]

```
void briar.BriarGrpc.DatabaseLoadRequest.MergeFrom (
    pb::CodedInputStream input ) [inline]
```

#### 7.45.2.8 ToString()

```
override string briar.BriarGrpc.DatabaseLoadRequest.ToString ( ) [inline]
```

#### 7.45.2.9 WriteTo()

```
void briar.BriarGrpc.DatabaseLoadRequest.WriteTo (
    pb::CodedOutputStream output ) [inline]
```

### 7.45.3 Member Data Documentation

#### 7.45.3.1 DatabaseFieldNumber

```
const int briar.BriarGrpc.DatabaseLoadRequest.DatabaseFieldNumber = 1 [static]
```

Field number for the "database" field.

#### 7.45.3.2 DurationsFieldNumber

```
const int briar.BriarGrpc.DatabaseLoadRequest.DurationsFieldNumber = 2 [static]
```

Field number for the "durations" field.

### 7.45.4 Property Documentation

#### 7.45.4.1 Database

```
global.briar.BriarGrpc.BriarDatabase briar.BriarGrpc.DatabaseLoadRequest.Database [get], [set]
```

Name of database to load

### 7.45.4.2 Descriptor

```
pbr.MessageDescriptor briar.BriarGrpc.DatabaseLoadRequest.Descriptor [static], [get]
```

### 7.45.4.3 Durations

```
global.briar.BriarGrpc.BriarDurations briar.BriarGrpc.DatabaseLoadRequest.Durations [get],  
[set]
```

Log the time needed to complete the request on the server

### 7.45.4.4 Parser

```
pb.MessageParser<DatabaseLoadRequest> briar.BriarGrpc.DatabaseLoadRequest.Parser [static],  
[get]
```

*RECOMMENDED: the id of a tracklet for this media*

### 7.56.1 Detailed Description

Data relating to the detection of an object in an image.

Tracklet\_id should be associate with a single person which may contain multiple detections for many modalities (head, body, hands, etc) and result in a single multimodal template.

### 7.56.2 Constructor & Destructor Documentation

#### 7.56.2.1 Detection() [1/2]

```
briar.BriarGrpc.Detection.Detection ( ) [inline]
```

#### 7.56.2.2 Detection() [2/2]

```
briar.BriarGrpc.Detection.Detection (
    Detection other ) [inline]
```

### 7.56.3 Member Function Documentation

#### 7.56.3.1 CalculateSize()

```
int briar.BriarGrpc.Detection.CalculateSize ( ) [inline]
```

### 7.56.3.2 Clone()

```
Detection briar.BriarGrpc.Detection.Clone ( ) [inline]
```

### 7.56.3.3 Equals() [1/2]

```
bool briar.BriarGrpc.Detection.Equals (
    Detection other ) [inline]
```

### 7.56.3.4 Equals() [2/2]

```
override bool briar.BriarGrpc.Detection.Equals (
    object other ) [inline]
```

### 7.56.3.5 GetHashCode()

```
override int briar.BriarGrpc.Detection.GetHashCode ( ) [inline]
```

### 7.56.3.6 MergeFrom() [1/2]

```
void briar.BriarGrpc.Detection.MergeFrom (
    Detection other ) [inline]
```

### 7.56.3.7 MergeFrom() [2/2]

```
void briar.BriarGrpc.Detection.MergeFrom (
    pb::CodedInputStream input ) [inline]
```

### 7.56.3.8 ToString()

```
override string briar.BriarGrpc.Detection.ToString ( ) [inline]
```

### 7.56.3.9 WriteTo()

```
void briar.BriarGrpc.Detection.WriteTo (
    pb::CodedOutputStream output ) [inline]
```

## 7.56.4 Member Data Documentation

### 7.56.4.1 AttributesFieldNumber

```
const int briar.BriarGrpc.Detection.AttributesFieldNumber = 7 [static]
```

Field number for the "attributes" field.

### 7.56.4.2 ConfidenceFieldNumber

```
const int briar.BriarGrpc.Detection.ConfidenceFieldNumber = 1 [static]
```

Field number for the "confidence" field.

### 7.56.4.3 DetectionClassFieldNumber

```
const int briar.BriarGrpc.Detection.DetectionClassFieldNumber = 6 [static]
```

Field number for the "detection\_class" field.

### 7.56.4.4 DetectionIdFieldNumber

```
const int briar.BriarGrpc.Detection.DetectionIdFieldNumber = 4 [static]
```

Field number for the "detection\_id" field.

### 7.56.4.5 FrameFieldNumber

```
const int briar.BriarGrpc.Detection.FrameFieldNumber = 3 [static]
```

Field number for the "frame" field.

#### 7.56.4.6 LocationFieldNumber

```
const int briar.BriarGrpc.Detection.LocationFieldNumber = 2 [static]
```

Field number for the "location" field.

#### 7.56.4.7 MaskFieldNumber

```
const int briar.BriarGrpc.Detection.MaskFieldNumber = 8 [static]
```

Field number for the "mask" field.

#### 7.56.4.8 MediaFieldNumber

```
const int briar.BriarGrpc.Detection.MediaFieldNumber = 9 [static]
```

Field number for the "media" field.

#### 7.56.4.9 ModalityFieldNumber

```
const int briar.BriarGrpc.Detection.ModalityFieldNumber = 10 [static]
```

Field number for the "modality" field.

#### 7.56.4.10 TrackletIdFieldNumber

```
const int briar.BriarGrpc.Detection.TrackletIdFieldNumber = 5 [static]
```

Field number for the "tracklet\_id" field.

### 7.56.5 Property Documentation

#### 7.56.5.1 Attributes

```
pb::RepeatedField<global.briar.BriarGrpc.Attribute> briar.BriarGrpc.Detection.Attributes  
[get]
```

OPTIONAL: attributes describing the detection

### 7.56.5.2 Confidence

```
float briar.BriarGrpc.Detection.Confidence [get], [set]
```

RECOMMENDED: Confidence of detection

### 7.56.5.3 Descriptor

```
pbr.MessageDescriptor briar.BriarGrpc.Detection.Descriptor [static], [get]
```

### 7.56.5.4 DetectionClass

```
string briar.BriarGrpc.Detection.DetectionClass [get], [set]
```

DEPRICATED: use modality or attributes instead

### 7.56.5.5 DetectionId

```
long briar.BriarGrpc.Detection.DetectionId [get], [set]
```

RECOMMENDED: unique id of detection

### 7.56.5.6 Frame

```
int briar.BriarGrpc.Detection.Frame [get], [set]
```

RECOMMENDED: Frame number associated with the detection

### 7.56.5.7 Location

```
global.briar.BriarGrpc.BriarRect briar.BriarGrpc.Detection.Location [get], [set]
```

REQUIRED: Bounding Box of detection

#### 7.56.5.8 Mask

```
global.briar.BriarGrpc.BriarMedia briar.BriarGrpc.Detection.Mask [get], [set]
```

DEPRICATED: use attributes instead - a mask pertaining to the segmented object detected

#### 7.56.5.9 Media

```
global.briar.BriarGrpc.BriarMedia briar.BriarGrpc.Detection.Media [get], [set]
```

DEPRICATED: use attributes instead - data pertaining to the detection (i.e.

an optional image)

#### 7.56.5.10 Modality

```
global.briar.BriarGrpc.BiometricModality briar.BriarGrpc.Detection.Modality [get], [set]
```

RECOMMENDED: modality associated with this detection.

#### 7.56.5.11 Parser

```
pb.MessageParser<Detection> briar.BriarGrpc.Detection.Parser [static], [get]
```

#### 7.56.5.12 TrackletId

```
long briar.BriarGrpc.Detection.TrackletId [get], [set]
```

RECOMMENDED: the id of a tracklet for this media

const int briar.BriarGrpc.DetectionOptions.FaceThresholdFieldNumber = 3 [static]
```

Field number for the "face\_threshold" field.

#### 7.57.4.11 ModalityFieldNumber

```
const int briar.BriarGrpc.DetectionOptions.ModalityFieldNumber = 12 [static]
```

Field number for the "modality" field.

#### 7.57.4.12 ReturnMediaFieldNumber

```
const int briar.BriarGrpc.DetectionOptions.ReturnMediaFieldNumber = 10 [static]
```

Field number for the "return\_media" field.

#### 7.57.4.13 TrackingOptionsFieldNumber

```
const int briar.BriarGrpc.DetectionOptions.TrackingOptionsFieldNumber = 11 [static]
```

Field number for the "tracking\_options" field.

### 7.57.5 Property Documentation

#### 7.57.5.1 AlgorithmId

```
global.briar.BriarGrpc.StringOption briar.BriarGrpc.DetectionOptions.AlgorithmId [get], [set]
```

uid corresponding to which algorithm to use

#### 7.57.5.2 Attributes

```
pbc.RepeatedField<global.briar.BriarGrpc.Attribute> briar.BriarGrpc.DetectionOptions.Attributes  
[get]
```

Used for passing algorithm specific or custom options

#### 7.57.5.3 Best

```
global.briar.BriarGrpc.BoolOption briar.BriarGrpc.DetectionOptions.Best [get], [set]
```

only respond with the best candidates

#### 7.57.5.4 BodyMinHeight

```
global.briar.BriarGrpc.IntOption briar.BriarGrpc.DetectionOptions.BodyMinHeight [get], [set]
```

min size for a body detection to be considered

#### 7.57.5.5 BodyThreshold

```
global.briar.BriarGrpc.FloatOption briar.BriarGrpc.DetectionOptions.BodyThreshold [get], [set]
```

min score for candidate consideration

#### 7.57.5.6 Debug

```
global.briar.BriarGrpc.BoolOption briar.BriarGrpc.DetectionOptions.Debug [get], [set]
```

Save or print more info on the server side

#### 7.57.5.7 Descriptor

```
pbr.MessageDescriptor briar.BriarGrpc.DetectionOptions.Descriptor [static], [get]
```

#### 7.57.5.8 DetectBatch

```
global.briar.BriarGrpc.IntOption briar.BriarGrpc.DetectionOptions.DetectBatch [get], [set]
```

batch size for detection processes

#### 7.57.5.9 EnableMetadata

```
global.briar.BriarGrpc.BoolOption briar.BriarGrpc.DetectionOptions.EnableMetadata [get], [set]
```

extract additional metadata and attributes (landmarks, pose, demographics, etc)

#### 7.57.5.10 FaceMinHeight

```
global.briar.BriarGrpc.IntOption briar.BriarGrpc.DetectionOptions.FaceMinHeight [get], [set]
```

min size for a face detection to be considered

### 7.57.5.11 FaceThreshold

```
global.briar.BriarGrpc.FloatOption briar.BriarGrpc.DetectionOptions.FaceThreshold [get], [set]
```

min score for candidate consideration

### 7.57.5.12 Modality

```
global.briar.BriarGrpc.BiometricModality briar.BriarGrpc.DetectionOptions.Modality [get],  
[set]
```

Whether detection is for face or whole body

### 7.57.5.13 Parser

```
pb.MessageParser<DetectionOptions> briar.BriarGrpc.DetectionOptions.Parser [static], [get]
```

### 7.57.5.14 ReturnMedia

```
global.briar.BriarGrpc.BoolOption briar.BriarGrpc.DetectionOptions.ReturnMedia [get], [set]
```

Should we return media (e.i.

cropped images) related to the detections back to the client?

### 7.57.5.15 TrackingOptions

```
global.briar.BriarGrpc.TrackingOptions briar.BriarGrpc.DetectionOptions.TrackingOptions [get],  
[set]
```

Configure tracking

```

OPTIONAL: the modality detected

### 7.58.4.7 Parser

```
pb.MessageParser<DetectReply> briar.BriarGrpc.DetectReply.Parser [static], [get]
```

#### 7.58.4.8 Progress

```
global.briar.BriarGrpc.BriarProgress briar.BriarGrpc.DetectReply.Progress [get], [set]
```

REQUIRED: provides progress updates for progress bar display.

See example code for details

#### 7.58.4.9 ProgressOnlyReply

```
bool briar.BriarGrpc.DetectReply.ProgressOnlyReply [get], [set]
```

REQUIRED: set to true if this is a reply only providing a progress update to the API.

If progress\_only\_reply is set to True, nothing else in the reply needs to be populated

#### 7.58.4.10 ReferenceMedia

```
global.briar.BriarGrpc.BriarMedia briar.BriarGrpc.DetectReply.ReferenceMedia [get], [set]
```

OPTIONAL: put reference media here to return it to the API.

This will slow down your API reply and is not currently used by the CLI

## 7.59.1 Constructor & Destructor Documentation

### 7.59.1.1 DetectRequest() [1/2]

```
briar.BriarGrpc.DetectRequest.DetectRequest ( ) [inline]
```

### 7.59.1.2 DetectRequest() [2/2]

```
briar.BriarGrpc.DetectRequest.DetectRequest (
    DetectRequest other ) [inline]
```

## 7.59.2 Member Function Documentation

### 7.59.2.1 CalculateSize()

```
int briar.BriarGrpc.DetectRequest.CalculateSize ( ) [inline]
```

### 7.59.2.2 Clone()

```
DetectRequest briar.BriarGrpc.DetectRequest.Clone ( ) [inline]
```

### 7.59.2.3 Equals() [1/2]

```
bool briar.BriarGrpc.DetectRequest.Equals (
    DetectRequest other ) [inline]
```

### 7.59.2.4 Equals() [2/2]

```
override bool briar.BriarGrpc.DetectRequest.Equals (
    object other ) [inline]
```

### 7.59.2.5 GetHashCode()

```
override int briar.BriarGrpc.DetectRequest.GetHashCode ( ) [inline]
```

### 7.59.2.6 MergeFrom() [1/2]

```
void briar.BriarGrpc.DetectRequest.MergeFrom (
    DetectRequest other ) [inline]
```

### 7.59.2.7 MergeFrom() [2/2]

```
void briar.BriarGrpc.DetectRequest.MergeFrom (
    pb::CodedInputStream input ) [inline]
```

### 7.59.2.8 ToString()

```
override string briar.BriarGrpc.DetectRequest.ToString ( ) [inline]
```

### 7.59.2.9 WriteTo()

```
void briar.BriarGrpc.DetectRequest.WriteTo (
    pb::CodedOutputStream output ) [inline]
```

## 7.59.3 Member Data Documentation

### 7.59.3.1 DetectOptionsFieldNumber

```
const int briar.BriarGrpc.DetectRequest.DetectOptionsFieldNumber = 8 [static]
```

Field number for the "detect\_options" field.

### 7.59.3.2 DurationsFieldNumber

```
const int briar.BriarGrpc.DetectRequest.DurationsFieldNumber = 7 [static]
```

Field number for the "durations" field.

### 7.59.3.3 EntryNameFieldNumber

```
const int briar.BriarGrpc.DetectRequest.EntryNameFieldNumber = 6 [static]
```

Field number for the "entry\_name" field.

### 7.59.3.4 EntryTypeFieldNumber

```
const int briar.BriarGrpc.DetectRequest.EntryTypeFieldNumber = 5 [static]
```

Field number for the "entry\_type" field.

### 7.59.3.5 FrameFieldNumber

```
const int briar.BriarGrpc.DetectRequest.FrameFieldNumber = 2 [static]
```

Field number for the "frame" field.

### 7.59.3.6 MediaFieldNumber

```
const int briar.BriarGrpc.DetectRequest.MediaFieldNumber = 1 [static]
```

Field number for the "media" field.

### 7.59.3.7 MediaIdFieldNumber

```
const int briar.BriarGrpc.DetectRequest.MediaIdFieldNumber = 4 [static]
```

Field number for the "media\_id" field.

### 7.59.3.8 SubjectIdFieldNumber

```
const int briar.BriarGrpc.DetectRequest.SubjectIdFieldNumber = 3 [static]
```

Field number for the "subject\_id" field.

## 7.59.4 Property Documentation

### 7.59.4.1 Descriptor

```
pbr.MessageDescriptor briar.BriarGrpc.DetectRequest.Descriptor [static], [get]
```

### 7.59.4.2 DetectOptions

```
global.briar.BriarGrpc.DetectionOptions briar.BriarGrpc.DetectRequest.DetectOptions [get],  
[set]
```

Hyperparameters to run the detection with

### 7.59.4.3 Durations

```
global.briar.BriarGrpc.BriarDurations briar.BriarGrpc.DetectRequest.Durations [get], [set]
```

Log the time needed to complete the request on the server

### 7.59.4.4 EntryName

```
string briar.BriarGrpc.DetectRequest.EntryName [get], [set]
```

Optional name of subject in the video

### 7.59.4.5 EntryType

```
global.briar.BriarGrpc.EntryType briar.BriarGrpc.DetectRequest.EntryType [get], [set]
```

```
string entry_id = 3; // Optional unique id of subject the video
```

#### 7.59.4.6 Frame

```
int briar.BriarGrpc.DetectRequest.Frame [get], [set]
```

What frame of the video this is

#### 7.59.4.7 Media

```
global.briar.BriarGrpc.BriarMedia briar.BriarGrpc.DetectRequest.Media [get], [set]
```

The video media to detect from

#### 7.59.4.8 MediaId

```
string briar.BriarGrpc.DetectRequest.MediaId [get], [set]
```

ID of media this detection will belong to

#### 7.59.4.9 Parser

```
pb.MessageParser<DetectRequest> briar.BriarGrpc.DetectRequest.Parser [static], [get]
```

#### 7.59.4.10 SubjectId

```
string briar.BriarGrpc.DetectRequest.SubjectId [get], [set]
```

ID of subject this detection will belong to

briar.BriarGrpc.EnhanceOptions.EnhanceOptions (
    EnhanceOptions other ) [inline]
```

## 7.61.3 Member Function Documentation

### 7.61.3.1 CalculateSize()

```
int briar.BriarGrpc.EnhanceOptions.CalculateSize ( ) [inline]
```

### 7.61.3.2 Clone()

```
EnhanceOptions briar.BriarGrpc.EnhanceOptions.Clone ( ) [inline]
```

### 7.61.3.3 Equals() [1/2]

```
bool briar.BriarGrpc.EnhanceOptions.Equals (
    EnhanceOptions other ) [inline]
```

### 7.61.3.4 Equals() [2/2]

```
override bool briar.BriarGrpc.EnhanceOptions.Equals (
    object other ) [inline]
```

### 7.61.3.5 GetHashCode()

```
override int briar.BriarGrpc.EnhanceOptions.GetHashCode ( ) [inline]
```

### 7.61.3.6 MergeFrom() [1/2]

```
void briar.BriarGrpc.EnhanceOptions.MergeFrom (
    EnhanceOptions other ) [inline]
```

### 7.61.3.7 MergeFrom() [2/2]

```
void briar.BriarGrpc.EnhanceOptions.MergeFrom (
    pb::CodedInputStream input ) [inline]
```

### 7.61.3.8 ToString()

```
override string briar.BriarGrpc.EnhanceOptions.ToString ( ) [inline]
```

### 7.61.3.9 WriteTo()

```
void briar.BriarGrpc.EnhanceOptions.WriteTo (
    pb::CodedOutputStream output ) [inline]
```

## 7.61.4 Member Data Documentation

### 7.61.4.1 AlgorithmIdFieldNumber

```
const int briar.BriarGrpc.EnhanceOptions.AlgorithmIdFieldNumber = 1 [static]
```

Field number for the "algorithm\_id" field.

### 7.61.4.2 AttributesFieldNumber

```
const int briar.BriarGrpc.EnhanceOptions.AttributesFieldNumber = 6 [static]
```

Field number for the "attributes" field.

### 7.61.4.3 CroppedFieldNumber

```
const int briar.BriarGrpc.EnhanceOptions.CroppedFieldNumber = 5 [static]
```

Field number for the "cropped" field.

#### 7.61.4.4 EnhanceBatchFieldNumber

```
const int briar.BriarGrpc.EnhanceOptions.EnhanceBatchFieldNumber = 3 [static]
```

Field number for the "enhance\_batch" field.

#### 7.61.4.5 ModalityFieldNumber

```
const int briar.BriarGrpc.EnhanceOptions.ModalityFieldNumber = 4 [static]
```

Field number for the "modality" field.

#### 7.61.4.6 ReturnMediaFieldNumber

```
const int briar.BriarGrpc.EnhanceOptions.ReturnMediaFieldNumber = 2 [static]
```

Field number for the "return\_media" field.

### 7.61.5 Property Documentation

#### 7.61.5.1 AlgorithmId

```
global.briar.BriarGrpc.StringOption briar.BriarGrpc.EnhanceOptions.AlgorithmId [get], [set]
```

uid corresponding to which algorithm to use

#### 7.61.5.2 Attributes

```
pbc.RepeatedField<global.briar.BriarGrpc.Attribute> briar.BriarGrpc.EnhanceOptions.Attributes  
[get]
```

Used for passing algorithm specific or custom options

#### 7.61.5.3 Cropped

```
bool briar.BriarGrpc.EnhanceOptions.Cropped [get], [set]
```

#### 7.61.5.4 Descriptor

`pbr.MessageDescriptor briar.BriarGrpc.EnhanceOptions.Descriptor [static], [get]`

#### 7.61.5.5 EnhanceBatch

`global.briar.BriarGrpc.IntOption briar.BriarGrpc.EnhanceOptions.EnhanceBatch [get], [set]`

batch size for enhancement processes

#### 7.61.5.6 Modality

`global.briar.BriarGrpc.BiometricModality briar.BriarGrpc.EnhanceOptions.Modality [get], [set]`

Whether detection is for face or whole body

#### 7.61.5.7 Parser

`pb.MessageParser<EnhanceOptions> briar.BriarGrpc.EnhanceOptions.Parser [static], [get]`

#### 7.61.5.8 ReturnMedia

`global.briar.BriarGrpc.BoolOption briar.BriarGrpc.EnhanceOptions.ReturnMedia [get], [set]`

Should we return media (e.i.

cropped images) related to the detections back to the client?

```

### 7.62.2.8 ToString()

```
override string briar.BriarGrpc.EnhanceReply.ToString ( ) [inline]
```

### 7.62.2.9 WriteTo()

```
void briar.BriarGrpc.EnhanceReply.WriteTo (
    pb::CodedOutputStream output ) [inline]
```

## 7.62.3 Member Data Documentation

### 7.62.3.1 DurationsFieldNumber

```
const int briar.BriarGrpc.EnhanceReply.DurationsFieldNumber = 2 [static]
```

Field number for the "durations" field.

### 7.62.3.2 ErrorsFieldNumber

```
const int briar.BriarGrpc.EnhanceReply.ErrorsFieldNumber = 4 [static]
```

Field number for the "errors" field.

### 7.62.3.3 MediaFieldNumber

```
const int briar.BriarGrpc.EnhanceReply.MediaFieldNumber = 1 [static]
```

Field number for the "media" field.

### 7.62.3.4 ProgressFieldNumber

```
const int briar.BriarGrpc.EnhanceReply.ProgressFieldNumber = 3 [static]
```

Field number for the "progress" field.

### 7.62.3.5 ProgressOnlyReplyFieldNumber

```
const int briar.BriarGrpc.EnhanceReply.ProgressOnlyReplyFieldNumber = 5 [static]
```

Field number for the "progress\_only\_reply" field.

## 7.62.4 Property Documentation

### 7.62.4.1 Descriptor

```
pbr.MessageDescriptor briar.BriarGrpc.EnhanceReply.Descriptor [static], [get]
```

### 7.62.4.2 Durations

```
global.briar.BriarGrpc.BriarDurations briar.BriarGrpc.EnhanceReply.Durations [get], [set]
```

Log the time needed to complete the request on the server

### 7.62.4.3 Errors

```
global.briar.BriarGrpc.BriarErrors briar.BriarGrpc.EnhanceReply.Errors [get], [set]
```

Indicate any errors or warnings.

### 7.62.4.4 Media

```
global.briar.BriarGrpc.BriarMedia briar.BriarGrpc.EnhanceReply.Media [get], [set]
```

REQUIRED: The enhanced result.

### 7.62.4.5 Parser

```
pb.MessageParser<EnhanceReply> briar.BriarGrpc.EnhanceReply.Parser [static], [get]
```

#### 7.62.4.6 Progress

```
global.briar.BriarGrpc.BriarProgress briar.BriarGrpc.EnhanceReply.Progress [get], [set]
```

OPTIONAL: provides progress updates for progress bar display.

See example code for details

#### 7.62.4.7 ProgressOnlyReply

```
bool briar.BriarGrpc.EnhanceReply.ProgressOnlyReply [get], [set]
```

REQUIRED: set to true if this is a reply only providing a progress update to the API.

If progress\_only\_reply is set to True, nothing else in the reply needs to be populated

### 7.63.1.2 EnhanceRequest() [2/2]

```
briar.BriarGrpc.EnhanceRequest.EnhanceRequest (
    EnhanceRequest other ) [inline]
```

## 7.63.2 Member Function Documentation

### 7.63.2.1 CalculateSize()

```
int briar.BriarGrpc.EnhanceRequest.CalculateSize ( ) [inline]
```

### 7.63.2.2 Clone()

```
EnhanceRequest briar.BriarGrpc.EnhanceRequest.Clone ( ) [inline]
```

### 7.63.2.3 Equals() [1/2]

```
bool briar.BriarGrpc.EnhanceRequest.Equals (
    EnhanceRequest other ) [inline]
```

### 7.63.2.4 Equals() [2/2]

```
override bool briar.BriarGrpc.EnhanceRequest.Equals (
    object other ) [inline]
```

### 7.63.2.5 GetHashCode()

```
override int briar.BriarGrpc.EnhanceRequest.GetHashCode ( ) [inline]
```

#### 7.63.2.6 MergeFrom() [1/2]

```
void briar.BriarGrpc.EnhanceRequest.MergeFrom (
    EnhanceRequest other ) [inline]
```

#### 7.63.2.7 MergeFrom() [2/2]

```
void briar.BriarGrpc.EnhanceRequest.MergeFrom (
    pb::CodedInputStream input ) [inline]
```

#### 7.63.2.8 ToString()

```
override string briar.BriarGrpc.EnhanceRequest.ToString ( ) [inline]
```

#### 7.63.2.9 WriteTo()

```
void briar.BriarGrpc.EnhanceRequest.WriteTo (
    pb::CodedOutputStream output ) [inline]
```

### 7.63.3 Member Data Documentation

#### 7.63.3.1 DurationsFieldNumber

```
const int briar.BriarGrpc.EnhanceRequest.DurationsFieldNumber = 5 [static]
```

Field number for the "durations" field.

#### 7.63.3.2 EnhanceOptionsFieldNumber

```
const int briar.BriarGrpc.EnhanceRequest.EnhanceOptionsFieldNumber = 6 [static]
```

Field number for the "enhance\_options" field.

### 7.63.3.3 FrameIdFieldNumber

```
const int briar.BriarGrpc.EnhanceRequest.FrameIdFieldNumber = 4 [static]
```

Field number for the "frame\_id" field.

### 7.63.3.4 MediaFieldNumber

```
const int briar.BriarGrpc.EnhanceRequest.MediaFieldNumber = 1 [static]
```

Field number for the "media" field.

### 7.63.3.5 MetadataFieldNumber

```
const int briar.BriarGrpc.EnhanceRequest.MetadataFieldNumber = 2 [static]
```

Field number for the "metadata" field.

### 7.63.3.6 OptionsFieldNumber

```
const int briar.BriarGrpc.EnhanceRequest.OptionsFieldNumber = 3 [static]
```

Field number for the "options" field.

## 7.63.4 Property Documentation

### 7.63.4.1 Descriptor

```
pbr.MessageDescriptor briar.BriarGrpc.EnhanceRequest.Descriptor [static], [get]
```

### 7.63.4.2 Durations

```
global.briar.BriarGrpc.BriarDurations briar.BriarGrpc.EnhanceRequest.Durations [get], [set]
```

Log the time needed to complete the request on the server

#### 7.63.4.3 EnhanceOptions

```
global.briar.BriarGrpc.EnhanceOptions briar.BriarGrpc.EnhanceRequest.EnhanceOptions [get], [set]
```

enhance options provided by the API

#### 7.63.4.4 FrameId

```
long briar.BriarGrpc.EnhanceRequest.FrameId [get], [set]
```

The id of the media frame associated with the detections.

#### 7.63.4.5 Media

```
global.briar.BriarGrpc.BriarMedia briar.BriarGrpc.EnhanceRequest.Media [get], [set]
```

The image or video to enhance.

#### 7.63.4.6 Metadata

```
pb.RepeatedField<global.briar.BriarGrpc.Attribute> briar.BriarGrpc.EnhanceRequest.Metadata [get]
```

Metadata on the video to select enhancement parameters.

#### 7.63.4.7 Options

```
pb.RepeatedField<global.briar.BriarGrpc.Attribute> briar.BriarGrpc.EnhanceRequest.Options [get]
```

Algorithm specific options.

#### 7.63.4.8 Parser

```
pb.MessageParser<EnhanceRequest> briar.BriarGrpc.EnhanceRequest.Parser [static], [get]
```

#### 7.64.2.9 WriteTo()

```
void briar.BriarGrpc.EnrollCustomRequest.WriteTo (
    pb::CodedOutputStream output ) [inline]
```

### 7.64.3 Member Data Documentation

#### 7.64.3.1 DatabaseFieldNumber

```
const int briar.BriarGrpc.EnrollCustomRequest.DatabaseFieldNumber = 3 [static]
```

Field number for the "database" field.

#### 7.64.3.2 DetectOptionsFieldNumber

```
const int briar.BriarGrpc.EnrollCustomRequest.DetectOptionsFieldNumber = 5 [static]
```

Field number for the "detect\_options" field.

#### 7.64.3.3 DurationsFieldNumber

```
const int briar.BriarGrpc.EnrollCustomRequest.DurationsFieldNumber = 4 [static]
```

Field number for the "durations" field.

#### 7.64.3.4 EnrollOptionsFieldNumber

```
const int briar.BriarGrpc.EnrollCustomRequest.EnrollOptionsFieldNumber = 7 [static]
```

Field number for the "enroll\_options" field.

#### 7.64.3.5 ExtractOptionsFieldNumber

```
const int briar.BriarGrpc.EnrollCustomRequest.ExtractOptionsFieldNumber = 6 [static]
```

Field number for the "extract\_options" field.

#### 7.64.3.6 SigsetEncodedFieldNumber

```
const int briar.BriarGrpc.EnrollCustomRequest.SigsetEncodedFieldNumber = 1 [static]
```

Field number for the "sigset\_encoded" field.

#### 7.64.3.7 SigsetNameFieldNumber

```
const int briar.BriarGrpc.EnrollCustomRequest.SigsetNameFieldNumber = 2 [static]
```

Field number for the "sigset\_name" field.

### 7.64.4 Property Documentation

#### 7.64.4.1 Database

```
global.briar.BriarGrpc.BriarDatabase briar.BriarGrpc.EnrollCustomRequest.Database [get], [set]
```

The database to enroll into

#### 7.64.4.2 Descriptor

```
pbr.MessageDescriptor briar.BriarGrpc.EnrollCustomRequest.Descriptor [static], [get]
```

#### 7.64.4.3 DetectOptions

```
global.briar.BriarGrpc.DetectionOptions briar.BriarGrpc.EnrollCustomRequest.DetectOptions  
[get], [set]
```

Hyperparameters to run the detection with

#### 7.64.4.4 Durations

```
global.briar.BriarGrpc.BriarDurations briar.BriarGrpc.EnrollCustomRequest.Durations [get],  
[set]
```

Log the time needed to complete the request on the server

#### 7.64.4.5 EnrollOptions

```
global.briar.BriarGrpc.EnrollOptions briar.BriarGrpc.EnrollCustomRequest.EnrollOptions [get],  
[set]
```

How this is to be enrolled in the database

#### 7.64.4.6 ExtractOptions

```
global.briar.BriarGrpc.ExtractOptions briar.BriarGrpc.EnrollCustomRequest.ExtractOptions [get],  
[set]
```

Hyperparameters to run the extraction with

#### 7.64.4.7 Parser

```
pb.MessageParser<EnrollCustomRequest> briar.BriarGrpc.EnrollCustomRequest.Parser [static],  
[get]
```

#### 7.64.4.8 SigsetEncoded

```
pb.ByteString briar.BriarGrpc.EnrollCustomRequest.SigsetEncoded [get], [set]
```

The signature set in an encoded json format created from a Pandas dataframe.

#### 7.64.4.9 SigsetName

```
string briar.BriarGrpc.EnrollCustomRequest.SigsetName [get], [set]
```

The name of the sigset

```
void briar.BriarGrpc.EnrollmentInfo.WriteTo (
    pb::CodedOutputStream output ) [inline]
```

### 7.65.4 Member Data Documentation

#### 7.65.4.1 AttributesFieldName

```
const int briar.BriarGrpc.EnrollmentInfo.AttributesFieldName = 7 [static]
```

Field number for the "attributes" field.

#### 7.65.4.2 DatabaseIdFieldName

```
const int briar.BriarGrpc.EnrollmentInfo.DatabaseIdFieldName = 1 [static]
```

Field number for the "database\_id" field.

#### 7.65.4.3 MediaIdFieldName

```
const int briar.BriarGrpc.EnrollmentInfo.MediaIdFieldName = 2 [static]
```

Field number for the "media\_id" field.

#### 7.65.4.4 NameFieldName

```
const int briar.BriarGrpc.EnrollmentInfo.NameFieldName = 5 [static]
```

Field number for the "name" field.

#### 7.65.4.5 SourceFieldName

```
const int briar.BriarGrpc.EnrollmentInfo.SourceFieldName = 6 [static]
```

Field number for the "source" field.

#### 7.65.4.6 SubjectIdFieldName

```
const int briar.BriarGrpc.EnrollmentInfo.SubjectIdFieldName = 3 [static]
```

Field number for the "subject\_id" field.

#### 7.65.4.7 TypeFieldName

```
const int briar.BriarGrpc.EnrollmentInfo.TypeFieldName = 4 [static]
```

Field number for the "type" field.

### 7.65.5 Property Documentation

#### 7.65.5.1 Attributes

```
pbc.RepeatedField<global.briar.BriarGrpc.Attribute> briar.BriarGrpc.EnrollmentInfo.Attributes  
[get]
```

Used for passing additional metadata

#### 7.65.5.2 DatabaseId

```
string briar.BriarGrpc.EnrollmentInfo.DatabaseId [get], [set]
```

uuid for this database

#### 7.65.5.3 Descriptor

```
pbr.MessageDescriptor briar.BriarGrpc.EnrollmentInfo.Descriptor [static], [get]
```

#### 7.65.5.4 MediaId

```
string briar.BriarGrpc.EnrollmentInfo.MediaId [get], [set]
```

string entry\_id = 2; // uuid for this entry (this is unique, typically subject\_id or media\_id) OPTIONAL unique id of the given input media.

If not provide a unique id should be assigned by the service: UNKNOWN\_#####.

#### 7.65.5.5 Name

```
string briar.BriarGrpc.EnrollmentInfo.Name [get], [set]
```

name of subject, if known

### 7.65.5.6 Parser

```
pb.MessageParser<EnrollmentInfo> briar.BriarGrpc.EnrollmentInfo.Parser [static], [get]
```

### 7.65.5.7 Source

```
string briar.BriarGrpc.EnrollmentInfo.Source [get], [set]
```

Describes the the media source

### 7.65.5.8 SubjectId

```
string briar.BriarGrpc.EnrollmentInfo.SubjectId [get], [set]
```

OPTIONAL unique id of the given input subject within a media.

If not provide a unique id should be assigned by the service: UNKNOWN\_#####.

### 7.65.5.9 Type

```
global.briar.BriarGrpc.EntryType briar.BriarGrpc.EnrollmentInfo.Type [get], [set]
```

subject\_id or media\_id

#### 7.66.4.12 SubjectIdsFieldNumber

```
const int briar.BriarGrpc.EnrollOptions.SubjectIdsFieldNumber = 4 [static]
```

Field number for the "subject\_ids" field.

#### 7.66.4.13 UseSubjectIntegerIdFieldNumber

```
const int briar.BriarGrpc.EnrollOptions.UseSubjectIntegerIdFieldNumber = 15 [static]
```

Field number for the "use\_subject\_integer\_id" field.

### 7.66.5 Property Documentation

#### 7.66.5.1 Attributes

```
pb::RepeatedField<global.briar.BriarGrpc.Attribute> briar.BriarGrpc.EnrollOptions.Attributes  
[get]
```

Used for passing algorithm specific options

### 7.66.5.2 Debug

```
global.briar.BriarGrpc.BoolOption briar.BriarGrpc.EnrollOptions.Debug [get], [set]
```

Save or print more info on the server side

### 7.66.5.3 Descriptor

```
pbr.MessageDescriptor briar.BriarGrpc.EnrollOptions.Descriptor [static], [get]
```

### 7.66.5.4 EnrollBatch

```
global.briar.BriarGrpc.IntOption briar.BriarGrpc.EnrollOptions.EnrollBatch [get], [set]
```

```
string entry_id = 4;
```

### 7.66.5.5 EnrollFlag

```
global.briar.BriarGrpc.EnrollFlags briar.BriarGrpc.EnrollOptions.EnrollFlag [get], [set]
```

### 7.66.5.6 EntryType

```
global.briar.BriarGrpc.EntryType briar.BriarGrpc.EnrollOptions.EntryType [get], [set]
```

Type of entry, either 'subject' or 'media'

### 7.66.5.7 MediaId

```
string briar.BriarGrpc.EnrollOptions.MediaId [get], [set]
```

ID of media this record belongs to (should be unique per record)

### 7.66.5.8 Modality

```
global.briar.BriarGrpc.BiometricModality briar.BriarGrpc.EnrollOptions.Modality [get], [set]
```

Modality of enrollment (i.e.

face or whole body)

### 7.66.5.9 Parser

```
pb.MessageParser<EnrollOptions> briar.BriarGrpc.EnrollOptions.Parser [static], [get]
```

### 7.66.5.10 ReturnMedia

```
global.briar.BriarGrpc.BoolOption briar.BriarGrpc.EnrollOptions.ReturnMedia [get], [set]
```

Should we return media (e.i.

cropped images) related to the detections back to the client?

### 7.66.5.11 SaveMetadata

```
global.briar.BriarGrpc.BoolOption briar.BriarGrpc.EnrollOptions.SaveMetadata [get], [set]
```

log the image on the server - Useful for debugging and record keeping

### 7.66.5.12 StoreMedia

```
global.briar.BriarGrpc.BoolOption briar.BriarGrpc.EnrollOptions.StoreMedia [get], [set]
```

Should the database store the media along with templates for searching

### 7.66.5.13 SubjectIdInteger

```
global.briar.BriarGrpc.IntOption briar.BriarGrpc.EnrollOptions.SubjectIdInteger [get], [set]
```

DEPRICATED: FOR LEGACY SYSTEMS ONLY.

Provides an integer-version of a subject ID

### 7.66.5.14 SubjectIds

```
pb.RepeatedField<string> briar.BriarGrpc.EnrollOptions.SubjectIds [get]
```

ID or list of IDs of subject(s) this record belongs to

### 7.66.5.15 UseSubjectIntegerId

```
global.briar.BriarGrpc.BoolOption briar.BriarGrpc.EnrollOptions.UseSubjectIntegerId [get],  
[set]
```

DEPRICATED: FOR LEGACY SYSTEMS ONLY.

Provides an integer-version of a subject ID

### 7.67.2.6 MergeFrom() [1/2]

```
void briar.BriarGrpc.EnrollReply.MergeFrom (
    EnrollReply other ) [inline]
```

### 7.67.2.7 MergeFrom() [2/2]

```
void briar.BriarGrpc.EnrollReply.MergeFrom (
    pb::CodedInputStream input ) [inline]
```

### 7.67.2.8 ToString()

```
override string briar.BriarGrpc.EnrollReply.ToString ( ) [inline]
```

### 7.67.2.9 WriteTo()

```
void briar.BriarGrpc.EnrollReply.WriteTo (
    pb::CodedOutputStream output ) [inline]
```

### 7.67.3 Member Data Documentation

#### 7.67.3.1 DetectionsFieldNumber

```
const int briar.BriarGrpc.EnrollReply.DetectionsFieldNumber = 1 [static]
```

Field number for the "detections" field.

#### 7.67.3.2 DetectReplyFieldNumber

```
const int briar.BriarGrpc.EnrollReply.DetectReplyFieldNumber = 4 [static]
```

Field number for the "detect\_reply" field.

#### 7.67.3.3 DurationsFieldNumber

```
const int briar.BriarGrpc.EnrollReply.DurationsFieldNumber = 2 [static]
```

Field number for the "durations" field.

#### 7.67.3.4 EnrollmentsFieldNumber

```
const int briar.BriarGrpc.EnrollReply.EnrollmentsFieldNumber = 8 [static]
```

Field number for the "enrollments" field.

#### 7.67.3.5 ErrorsFieldNumber

```
const int briar.BriarGrpc.EnrollReply.ErrorsFieldNumber = 7 [static]
```

Field number for the "errors" field.

### 7.67.3.6 ExtractReplyFieldNumber

```
const int briar.BriarGrpc.EnrollReply.ExtractReplyFieldNumber = 6 [static]
```

Field number for the "extract\_reply" field.

### 7.67.3.7 FrameIdFieldNumber

```
const int briar.BriarGrpc.EnrollReply.FrameIdFieldNumber = 3 [static]
```

Field number for the "frame\_id" field.

### 7.67.3.8 ProgressFieldNumber

```
const int briar.BriarGrpc.EnrollReply.ProgressFieldNumber = 9 [static]
```

Field number for the "progress" field.

### 7.67.3.9 ProgressOnlyReplyFieldNumber

```
const int briar.BriarGrpc.EnrollReply.ProgressOnlyReplyFieldNumber = 10 [static]
```

Field number for the "progress\_only\_reply" field.

### 7.67.3.10 TrackReplyFieldNumber

```
const int briar.BriarGrpc.EnrollReply.TrackReplyFieldNumber = 5 [static]
```

Field number for the "track\_reply" field.

## 7.67.4 Property Documentation

### 7.67.4.1 Descriptor

```
pbr.MessageDescriptor briar.BriarGrpc.EnrollReply.Descriptor [static], [get]
```

#### 7.67.4.2 Detections

```
pb::RepeatedField<global::briar::BriarGrpc::Detection> briar::BriarGrpc::EnrollReply::Detections  
[get]
```

DEPRICATED: FOR LEGACY SYSTEMS ONLY.

use detect\_reply instead. Detections generated by auto-detect

#### 7.67.4.3 DetectReply

```
global::briar::BriarGrpc::DetectReply briar::BriarGrpc::EnrollReply::DetectReply [get], [set]
```

OPTIONAL: A detect reply to be populated if the service is sending intermediate detection results back to the client

#### 7.67.4.4 Durations

```
global::briar::BriarGrpc::BriarDurations briar::BriarGrpc::EnrollReply::Durations [get], [set]
```

Log the time needed to complete the request on the server

#### 7.67.4.5 Enrollments

```
pb::RepeatedField<global::briar::BriarGrpc::EnrollmentInfo> briar::BriarGrpc::EnrollReply::Enrollments  
[get]
```

OPTIONAL: Information about the enrollments

#### 7.67.4.6 Errors

```
global::briar::BriarGrpc::BriarErrors briar::BriarGrpc::EnrollReply::Errors [get], [set]
```

#### 7.67.4.7 ExtractReply

```
global::briar::BriarGrpc::ExtractReply briar::BriarGrpc::EnrollReply::ExtractReply [get], [set]
```

OPTIONAL: An extract reply to be populated if the service is sending intermediate extraction results back to the client

#### 7.67.4.8 Frameld

long briar.BriarGrpc.EnrollReply.FrameId [get], [set]

OPTIONAL: The id of the media frame associated with the detections.

#### 7.67.4.9 Parser

pb.MessageParser<EnrollReply> briar.BriarGrpc.EnrollReply.Parser [static], [get]

#### 7.67.4.10 Progress

global.briar.BriarGrpc.BriarProgress briar.BriarGrpc.EnrollReply.Progress [get], [set]

OPTIONAL: provides progress updates for progress bar display.

See example code for details

#### 7.67.4.11 ProgressOnlyReply

bool briar.BriarGrpc.EnrollReply.ProgressOnlyReply [get], [set]

REQUIRED: set to true if this is a reply only providing a progress update to the API.

If progress\_only\_reply is set to True, nothing else in the reply needs to be populated

#### 7.67.4.12 TrackReply

global.briar.BriarGrpc.TrackReply briar.BriarGrpc.EnrollReply.TrackReply [get], [set]

OPTIONAL: A track reply to be populated if the service is sending intermediate detection results back to the client

    EnrollRequest other ) [inline]
```

### 7.68.2.7 MergeFrom() [2/2]

```
void briar.BriarGrpc.EnrollRequest.MergeFrom (
    pb::CodedInputStream input ) [inline]
```

### 7.68.2.8 ToString()

```
override string briar.BriarGrpc.EnrollRequest.ToString ( ) [inline]
```

### 7.68.2.9 WriteTo()

```
void briar.BriarGrpc.EnrollRequest.WriteTo (
    pb::CodedOutputStream output ) [inline]
```

## 7.68.3 Member Data Documentation

### 7.68.3.1 DatabaseFieldNumber

```
const int briar.BriarGrpc.EnrollRequest.DatabaseFieldNumber = 3 [static]
```

Field number for the "database" field.

### 7.68.3.2 DetectionsFieldNumber

```
const int briar.BriarGrpc.EnrollRequest.DetectionsFieldNumber = 10 [static]
```

Field number for the "detections" field.

### 7.68.3.3 DetectOptionsFieldNumber

```
const int briar.BriarGrpc.EnrollRequest.DetectOptionsFieldNumber = 14 [static]
```

Field number for the "detect\_options" field.

### 7.68.3.4 DurationsFieldNumber

```
const int briar.BriarGrpc.EnrollRequest.DurationsFieldNumber = 13 [static]
```

Field number for the "durations" field.

### 7.68.3.5 EnrollFlagFieldNumber

```
const int briar.BriarGrpc.EnrollRequest.EnrollFlagFieldNumber = 9 [static]
```

Field number for the "enroll\_flag" field.

### 7.68.3.6 EnrollOptionsFieldNumber

```
const int briar.BriarGrpc.EnrollRequest.EnrollOptionsFieldNumber = 16 [static]
```

Field number for the "enroll\_options" field.

### 7.68.3.7 ExtractOptionsFieldNumber

```
const int briar.BriarGrpc.EnrollRequest.ExtractOptionsFieldNumber = 15 [static]
```

Field number for the "extract\_options" field.

### 7.68.3.8 FrameFieldNumber

```
const int briar.BriarGrpc.EnrollRequest.FrameFieldNumber = 2 [static]
```

Field number for the "frame" field.

### 7.68.3.9 MediaFieldNumber

```
const int briar.BriarGrpc.EnrollRequest.MediaFieldNumber = 1 [static]
```

Field number for the "media" field.

### 7.68.3.10 MediaIdFieldNumber

```
const int briar.BriarGrpc.EnrollRequest.MediaIdFieldNumber = 4 [static]
```

Field number for the "media\_id" field.

### 7.68.3.11 RecordFieldNumber

```
const int briar.BriarGrpc.EnrollRequest.RecordFieldNumber = 12 [static]
```

Field number for the "record" field.

### 7.68.3.12 SubjectIdIntegerFieldNumber

```
const int briar.BriarGrpc.EnrollRequest.SubjectIdIntegerFieldNumber = 17 [static]
```

Field number for the "subject\_id\_integer" field.

### 7.68.3.13 SubjectIdsFieldNumber

```
const int briar.BriarGrpc.EnrollRequest.SubjectIdsFieldNumber = 5 [static]
```

Field number for the "subject\_ids" field.

### 7.68.3.14 TemplateFieldNumber

```
const int briar.BriarGrpc.EnrollRequest.TemplateFieldNumber = 11 [static]
```

Field number for the "template" field.

### 7.68.3.15 TracksFieldNumber

```
const int briar.BriarGrpc.EnrollRequest.TracksFieldNumber = 8 [static]
```

Field number for the "tracks" field.

## 7.68.4 Property Documentation

### 7.68.4.1 Database

```
global.briar.BriarGrpc.BriarDatabase briar.BriarGrpc.EnrollRequest.Database [get], [set]
```

The database to enroll into

### 7.68.4.2 Descriptor

```
pbr.MessageDescriptor briar.BriarGrpc.EnrollRequest.Descriptor [static], [get]
```

### 7.68.4.3 Detections

```
pb.RepeatedField<global.briar.BriarGrpc.Detection> briar.BriarGrpc.EnrollRequest.Detections  
[get]
```

OPTIONAL user specified detection to extract image from

### 7.68.4.4 DetectOptions

```
global.briar.BriarGrpc.DetectOptions briar.BriarGrpc.EnrollRequest.DetectOptions [get],  
[set]
```

Hyperparameters to run the detection with

### 7.68.4.5 Durations

```
global.briar.BriarGrpc.BriarDurations briar.BriarGrpc.EnrollRequest.Durations [get], [set]
```

Log the time needed to complete the request on the server

### 7.68.4.6 EnrollFlag

```
global.briar.BriarGrpc.EnrollFlags briar.BriarGrpc.EnrollRequest.EnrollFlag [get], [set]
```

How to run the enrollement

### 7.68.4.7 EnrollOptions

```
global.briar.BriarGrpc.EnrollOptions briar.BriarGrpc.EnrollRequest.EnrollOptions [get], [set]
```

How this is to be enrolled in the database

### 7.68.4.8 ExtractOptions

```
global.briar.BriarGrpc.ExtractOptions briar.BriarGrpc.EnrollRequest.ExtractOptions [get],  
[set]
```

Hyperparameters to run the extraction with

#### 7.68.4.9 Frame

```
int briar.BriarGrpc.EnrollRequest.Frame [get], [set]
```

What frame of the video this is

#### 7.68.4.10 Media

```
global.briar.BriarGrpc.BriarMedia briar.BriarGrpc.EnrollRequest.Media [get], [set]
```

The image or video media to process

#### 7.68.4.11 MediaId

```
string briar.BriarGrpc.EnrollRequest.MediaId [get], [set]
```

OPTIONAL unique id of the given input media.

If not provide a unique id should be assigned by the service: UNKNOWN\_#####.

#### 7.68.4.12 Parser

```
pb.MessageParser<EnrollRequest> briar.BriarGrpc.EnrollRequest.Parser [static], [get]
```

#### 7.68.4.13 Record

```
global.briar.BriarGrpc.Record briar.BriarGrpc.EnrollRequest.Record [get], [set]
```

DEPRICATED: records are not used at this time.

#### 7.68.4.14 SubjectIdInteger

```
int briar.BriarGrpc.EnrollRequest.SubjectIdInteger [get], [set]
```

DEPRICATED: FOR LEGACY SYSTEMS ONLY.

Provides an integer-version of a subject ID

#### 7.68.4.15 SubjectIds

```
pbc.RepeatedField<string> briar.BriarGrpc.EnrollRequest.SubjectIds [get]
```

OPTIONAL unique id of the given input subject within a media.

If not provide a unique id should be assigned by the service: UNKNOWN\_#####.

#### 7.68.4.16 Template

```
global.briar.BriarGrpc.Template briar.BriarGrpc.EnrollRequest.Template [get], [set]
```

OPTIONAL User specified template to enroll bypassing detect and extract

#### 7.68.4.17 Tracks

```
pbc.RepeatedField<global.briar.BriarGrpc.Tracklet> briar.BriarGrpc.EnrollRequest.Tracks [get]
```

OPTIONAL Clients may provide a list of tracks from external algorithms that should be used instead of internal detection algorithms.

The documentation for this class was generated from the following file:

### 7.69.1 Detailed Description

Options to extract a detected subject from an image

### 7.69.2 Constructor & Destructor Documentation

#### 7.69.2.1 ExtractOptions() [1/2]

```
briar.BriarGrpc.ExtractOptions.ExtractOptions ( ) [inline]
```

#### 7.69.2.2 ExtractOptions() [2/2]

```
briar.BriarGrpc.ExtractOptions.ExtractOptions (
    ExtractOptions other ) [inline]
```

### 7.69.3 Member Function Documentation

#### 7.69.3.1 CalculateSize()

```
int briar.BriarGrpc.ExtractOptions.CalculateSize ( ) [inline]
```

### 7.69.3.2 Clone()

```
ExtractOptions briar.BriarGrpc.ExtractOptions.Clone ( ) [inline]
```

### 7.69.3.3 Equals() [1/2]

```
bool briar.BriarGrpc.ExtractOptions.Equals (
    ExtractOptions other ) [inline]
```

### 7.69.3.4 Equals() [2/2]

```
override bool briar.BriarGrpc.ExtractOptions.Equals (
    object other ) [inline]
```

### 7.69.3.5 GetHashCode()

```
override int briar.BriarGrpc.ExtractOptions.GetHashCode ( ) [inline]
```

### 7.69.3.6 MergeFrom() [1/2]

```
void briar.BriarGrpc.ExtractOptions.MergeFrom (
    ExtractOptions other ) [inline]
```

### 7.69.3.7 MergeFrom() [2/2]

```
void briar.BriarGrpc.ExtractOptions.MergeFrom (
    pb::CodedInputStream input ) [inline]
```

### 7.69.3.8 ToString()

```
override string briar.BriarGrpc.ExtractOptions.ToString ( ) [inline]
```

### 7.69.3.9 WriteTo()

```
void briar.BriarGrpc.ExtractOptions.WriteTo (
    pb::CodedOutputStream output ) [inline]
```

## 7.69.4 Member Data Documentation

### 7.69.4.1 AlgorithmIdFieldNumber

```
const int briar.BriarGrpc.ExtractOptions.AlgorithmIdFieldNumber = 1 [static]
```

Field number for the "algorithm\_id" field.

### 7.69.4.2 AttributesFieldNumber

```
const int briar.BriarGrpc.ExtractOptions.AttributesFieldNumber = 8 [static]
```

Field number for the "attributes" field.

### 7.69.4.3 DebugFieldNumber

```
const int briar.BriarGrpc.ExtractOptions.DebugFieldNumber = 2 [static]
```

Field number for the "debug" field.

### 7.69.4.4 ExtractBatchFieldNumber

```
const int briar.BriarGrpc.ExtractOptions.ExtractBatchFieldNumber = 4 [static]
```

Field number for the "extract\_batch" field.

### 7.69.4.5 FlagFieldNumber

```
const int briar.BriarGrpc.ExtractOptions.FlagFieldNumber = 3 [static]
```

Field number for the "flag" field.

#### 7.69.4.6 ModalityFieldNumber

```
const int briar.BriarGrpc.ExtractOptions.ModalityFieldNumber = 5 [static]
```

Field number for the "modality" field.

#### 7.69.4.7 ReturnMediaFieldNumber

```
const int briar.BriarGrpc.ExtractOptions.ReturnMediaFieldNumber = 6 [static]
```

Field number for the "return\_media" field.

### 7.69.5 Property Documentation

#### 7.69.5.1 AlgorithmId

```
global.briar.BriarGrpc.StringOption briar.BriarGrpc.ExtractOptions.AlgorithmId [get], [set]
```

#### 7.69.5.2 Attributes

```
pbc.RepeatedField<global.briar.BriarGrpc.Attribute> briar.BriarGrpc.ExtractOptions.Attributes  
[get]
```

Used for passing algorithm specific options

#### 7.69.5.3 Debug

```
global.briar.BriarGrpc.BoolOption briar.BriarGrpc.ExtractOptions.Debug [get], [set]
```

Save or print more info on the server side

#### 7.69.5.4 Descriptor

```
pbr.MessageDescriptor briar.BriarGrpc.ExtractOptions.Descriptor [static], [get]
```

### 7.69.5.5 ExtractBatch

```
global.briar.BriarGrpc.IntOption briar.BriarGrpc.ExtractOptions.ExtractBatch [get], [set]
```

batch size for extraction processes

### 7.69.5.6 Flag

```
global.briar.BriarGrpc.ExtractFlags briar.BriarGrpc.ExtractOptions.Flag [get], [set]
```

Flags to allow for auto-detection

### 7.69.5.7 Modality

```
global.briar.BriarGrpc.BiometricModality briar.BriarGrpc.ExtractOptions.Modality [get], [set]
```

Specifies extraction for a specific modality (i.e.

face or whole body)

### 7.69.5.8 Parser

```
pb.MessageParser<ExtractOptions> briar.BriarGrpc.ExtractOptions.Parser [static], [get]
```

### 7.69.5.9 ReturnMedia

```
global.briar.BriarGrpc.BoolOption briar.BriarGrpc.ExtractOptions.ReturnMedia [get], [set]
```

Should we return media (e.i.

cropped images) related to the detections back to the client?

```

### 7.70.2.9 WriteTo()

```
void briar.BriarGrpc.ExtractReply.WriteTo (
    pb::CodedOutputStream output ) [inline]
```

## 7.70.3 Member Data Documentation

### 7.70.3.1 DetectReplyFieldNumber

```
const int briar.BriarGrpc.ExtractReply.DetectReplyFieldNumber = 6 [static]
```

Field number for the "detect\_reply" field.

### 7.70.3.2 DurationsFieldNumber

```
const int briar.BriarGrpc.ExtractReply.DurationsFieldNumber = 4 [static]
```

Field number for the "durations" field.

### 7.70.3.3 ErrorsFieldNumber

```
const int briar.BriarGrpc.ExtractReply.ErrorsFieldNumber = 8 [static]
```

Field number for the "errors" field.

### 7.70.3.4 FrameldFieldNumber

```
const int briar.BriarGrpc.ExtractReply.FrameIdFieldNumber = 3 [static]
```

Field number for the "frame\_id" field.

### 7.70.3.5 ModalityFieldNumber

```
const int briar.BriarGrpc.ExtractReply.ModalityFieldNumber = 5 [static]
```

Field number for the "modality" field.

### 7.70.3.6 ProgressFieldNumber

```
const int briar.BriarGrpc.ExtractReply.ProgressFieldNumber = 9 [static]
```

Field number for the "progress" field.

### 7.70.3.7 ProgressOnlyReplyFieldNumber

```
const int briar.BriarGrpc.ExtractReply.ProgressOnlyReplyFieldNumber = 10 [static]
```

Field number for the "progress\_only\_reply" field.

### 7.70.3.8 TemplatesFieldNumber

```
const int briar.BriarGrpc.ExtractReply.TemplatesFieldNumber = 1 [static]
```

Field number for the "templates" field.

### 7.70.3.9 TrackReplyFieldNumber

```
const int briar.BriarGrpc.ExtractReply.TrackReplyFieldNumber = 7 [static]
```

Field number for the "track\_reply" field.

## 7.70.4 Property Documentation

### 7.70.4.1 Descriptor

```
pbr.MessageDescriptor briar.BriarGrpc.ExtractReply.Descriptor [static], [get]
```

### 7.70.4.2 DetectReply

```
global.briar.BriarGrpc.DetectReply briar.BriarGrpc.ExtractReply.DetectReply [get], [set]
```

OPTIONAL: the detect reply associated with the extraction if the service is sending intermediate detection results back to the client

### 7.70.4.3 Durations

```
global.briar.BriarGrpc.BriarDurations briar.BriarGrpc.ExtractReply.Durations [get], [set]
```

Log the time needed to complete the request on the server

### 7.70.4.4 Errors

```
global.briar.BriarGrpc.BriarErrors briar.BriarGrpc.ExtractReply.Errors [get], [set]
```

### 7.70.4.5 FrameId

```
long briar.BriarGrpc.ExtractReply.FrameId [get], [set]
```

OPTIONAL: Id of the media frame associated with the extract

#### 7.70.4.6 Modality

```
global.briar.BriarGrpc.BiometricModality briar.BriarGrpc.ExtractReply.Modality [get], [set]
```

OPTIONAL: the modality of the templates extracted

#### 7.70.4.7 Parser

```
pb.MessageParser<ExtractReply> briar.BriarGrpc.ExtractReply.Parser [static], [get]
```

#### 7.70.4.8 Progress

```
global.briar.BriarGrpc.BriarProgress briar.BriarGrpc.ExtractReply.Progress [get], [set]
```

OPTIONAL: provides progress updates for progress bar display.

See example code for details

#### 7.70.4.9 ProgressOnlyReply

```
bool briar.BriarGrpc.ExtractReply.ProgressOnlyReply [get], [set]
```

REQUIRED: set to true if this is a reply only providing a progress update to the API.

If progress\_only\_reply is set to True, nothing else in the reply needs to be populated

#### 7.70.4.10 Templates

```
pb.RepeatedField<global.briar.BriarGrpc.Template> briar.BriarGrpc.ExtractReply.Templates [get]
```

REQUIRED: Extracted features

#### 7.70.4.11 TrackReply

```
global.briar.BriarGrpc.TrackReply briar.BriarGrpc.ExtractReply.TrackReply [get], [set]
```

OPTIONAL: the track reply associated with the extraction if the service is sending intermediate detection results back to the client

```

## 7.76.3 Member Data Documentation

### 7.76.3.1 AlgorithmFieldNumber

```
const int briar.BriarGrpc.Record.AlgorithmFieldNumber = 7 [static]
```

Field number for the "algorithm" field.

### 7.76.3.2 AttributesFieldNumber

```
const int briar.BriarGrpc.Record.AttributesFieldNumber = 13 [static]
```

Field number for the "attributes" field.

### 7.76.3.3 DatabaseIdFieldNumber

```
const int briar.BriarGrpc.Record.DatabaseIdFieldNumber = 1 [static]
```

Field number for the "database\_id" field.

### 7.76.3.4 DetectionFieldNumber

```
const int briar.BriarGrpc.Record.DetectionFieldNumber = 14 [static]
```

Field number for the "detection" field.

### 7.76.3.5 EntryIdFieldNumber

```
const int briar.BriarGrpc.Record.EntryIdFieldNumber = 2 [static]
```

Field number for the "entry\_id" field.

### 7.76.3.6 EntryTypeFieldNumber

```
const int briar.BriarGrpc.Record.EntryTypeFieldNumber = 3 [static]
```

Field number for the "entry\_type" field.

### 7.76.3.7 MediaIdFieldNumber

```
const int briar.BriarGrpc.Record.MediaIdFieldNumber = 17 [static]
```

Field number for the "media\_id" field.

### 7.76.3.8 MediaPreviewsFieldNumber

```
const int briar.BriarGrpc.Record.MediaPreviewsFieldNumber = 9 [static]
```

Field number for the "media\_previews" field.

### 7.76.3.9 ModalityFieldNumber

```
const int briar.BriarGrpc.Record.ModalityFieldNumber = 16 [static]
```

Field number for the "modality" field.

### 7.76.3.10 NameFieldNumber

```
const int briar.BriarGrpc.Record.NameFieldNumber = 5 [static]
```

Field number for the "name" field.

### 7.76.3.11 NotesFieldNumber

```
const int briar.BriarGrpc.Record.NotesFieldNumber = 8 [static]
```

Field number for the "notes" field.

#### 7.76.3.12 SourceFieldNumber

```
const int briar.BriarGrpc.Record.SourceFieldNumber = 15 [static]
```

Field number for the "source" field.

#### 7.76.3.13 SourceIdFieldNumber

```
const int briar.BriarGrpc.Record.SourceIdFieldNumber = 6 [static]
```

Field number for the "source\_id" field.

#### 7.76.3.14 SubjectIdFieldNumber

```
const int briar.BriarGrpc.Record.SubjectIdFieldNumber = 4 [static]
```

Field number for the "subject\_id" field.

#### 7.76.3.15 SubjectPreviewsFieldNumber

```
const int briar.BriarGrpc.Record.SubjectPreviewsFieldNumber = 10 [static]
```

Field number for the "subject\_previews" field.

#### 7.76.3.16 TemplatesFieldNumber

```
const int briar.BriarGrpc.Record.TemplatesFieldNumber = 11 [static]
```

Field number for the "templates" field.

#### 7.76.3.17 TrackletsFieldNumber

```
const int briar.BriarGrpc.Record.TrackletsFieldNumber = 12 [static]
```

Field number for the "tracklets" field.

## 7.76.4 Property Documentation

### 7.76.4.1 Algorithm

```
string briar.BriarGrpc.Record.Algorithm [get], [set]
```

OPTIONAL: Algorithm used to create the subject's templates

### 7.76.4.2 Attributes

```
pbc.RepeatedField<global.briar.BriarGrpc.Attribute> briar.BriarGrpc.Record.Attributes [get]
```

OPTIONAL: Additional data about the record

### 7.76.4.3 DatabaseId

```
global.briar.BriarGrpc.BriarDatabase briar.BriarGrpc.Record.DatabaseId [get], [set]
```

DEPRICATED, FOR LEGACY SYSTEMS ONLY Records are used to connect related information about media or a subject that is stored in a database.

Its structure may change in future API releases. This object is intened to hold information that is generally useful to humans. The intension is that it will allow a GUI or similar tool to display basic inforamtion about the data base entry. For example, it would link an enrollment for a subject back to a passport like photo, name and other information. Ideally it should also support linking back to the source media, detection and tracking info, and other data that could be used to better understand how the media was processed. Example: display source video with overlayed bounding boxes.

### 7.76.4.4 Descriptor

```
pbr.MessageDescriptor briar.BriarGrpc.Record.Descriptor [static], [get]
```

### 7.76.4.5 Detection

```
global.briar.BriarGrpc.Detection briar.BriarGrpc.Record.Detection [get], [set]
```

#### 7.76.4.6 EntryId

```
string briar.BriarGrpc.Record.EntryId [get], [set]
```

REQUIRED: database entry associated with this record

#### 7.76.4.7 EntryType

```
global.briar.BriarGrpc.EntryType briar.BriarGrpc.Record.EntryType [get], [set]
```

REQUIRED: Type of entry, either 'subject' or 'media'

#### 7.76.4.8 MediaId

```
string briar.BriarGrpc.Record.MediaId [get], [set]
```

#### 7.76.4.9 MediaPreviews

```
pbic.MapField<string, global.briar.BriarGrpc.BriarMedia> briar.BriarGrpc.Record.MediaPreviews  
[get]
```

OPTIONAL: A small set of images representing the raw media.

Example: a few low resolution frames.

#### 7.76.4.10 Modality

```
global.briar.BriarGrpc.BiometricModality briar.BriarGrpc.Record.Modality [get], [set]
```

#### 7.76.4.11 Name

```
string briar.BriarGrpc.Record.Name [get], [set]
```

OPTIONAL: Name of the subject.

Subject may be unknown.

#### 7.76.4.12 Notes

```
string briar.BriarGrpc.Record.Notes [get], [set]
```

OPTIONAL: Additional notes about the subject or the media

#### 7.76.4.13 Parser

```
pb.MessageParser<Record> briar.BriarGrpc.Record.Parser [static], [get]
```

#### 7.76.4.14 Source

```
string briar.BriarGrpc.Record.Source [get], [set]
```

#### 7.76.4.15 SourceId

```
pbc.RepeatedField<string> briar.BriarGrpc.Record.SourceId [get]
```

RECOMENDED: A list of source ids associated with this entry.

#### 7.76.4.16 SubjectId

```
string briar.BriarGrpc.Record.SubjectId [get], [set]
```

OPTIONAL: ID of subject this record belong.

Leave blank if unknown.

#### 7.76.4.17 SubjectPreviews

```
pbc.MapField<string, global.briar.BriarGrpc.BriarMedia> briar.BriarGrpc.Record.SubjectPreviews [get]
```

OPTIONAL: small previews that could be displayed for GUIs or manual verification of a subject.

Example: similar to mugshots or passport photos.

#### 7.76.4.18 Templates

```
string briar.BriarGrpc.Record.Templates [get], [set]
```

OPTIONAL: A list of template ids associated with this entry.

#### 7.76.4.19 Tracklets

```
string briar.BriarGrpc.Record.Tracklets [get], [set]
```

OPTIONAL: A list of tracklet\_ids associated with this entry.

*REQUIRED: Return: List of similarities in scored order*

### 7.78.1 Constructor & Destructor Documentation

#### 7.78.1.1 SearchDatabaseReply() [1/2]

```
briar.BriarGrpc.SearchDatabaseReply.SearchDatabaseReply ( ) [inline]
```

### 7.78.1.2 SearchDatabaseReply() [2/2]

```
briar.BriarGrpc.SearchDatabaseReply.SearchDatabaseReply (
    SearchDatabaseReply other ) [inline]
```

## 7.78.2 Member Function Documentation

### 7.78.2.1 CalculateSize()

```
int briar.BriarGrpc.SearchDatabaseReply.CalculateSize ( ) [inline]
```

### 7.78.2.2 Clone()

```
SearchDatabaseReply briar.BriarGrpc.SearchDatabaseReply.Clone ( ) [inline]
```

### 7.78.2.3 Equals() [1/2]

```
override bool briar.BriarGrpc.SearchDatabaseReply.Equals (
    object other ) [inline]
```

### 7.78.2.4 Equals() [2/2]

```
bool briar.BriarGrpc.SearchDatabaseReply.Equals (
    SearchDatabaseReply other ) [inline]
```

### 7.78.2.5 GetHashCode()

```
override int briar.BriarGrpc.SearchDatabaseReply.GetHashCode ( ) [inline]
```

### 7.78.2.6 MergeFrom() [1/2]

```
void briar.BriarGrpc.SearchDatabaseReply.MergeFrom (
    pb::CodedInputStream input ) [inline]
```

### 7.78.2.7 MergeFrom() [2/2]

```
void briar.BriarGrpc.SearchDatabaseReply.MergeFrom (
    SearchDatabaseReply other ) [inline]
```

### 7.78.2.8 ToString()

```
override string briar.BriarGrpc.SearchDatabaseReply.ToString ( ) [inline]
```

### 7.78.2.9 WriteTo()

```
void briar.BriarGrpc.SearchDatabaseReply.WriteTo (
    pb::CodedOutputStream output ) [inline]
```

## 7.78.3 Member Data Documentation

### 7.78.3.1 DurationsFieldNumber

```
const int briar.BriarGrpc.SearchDatabaseReply.DurationsFieldNumber = 3 [static]
```

Field number for the "durations" field.

### 7.78.3.2 ErrorsFieldNumber

```
const int briar.BriarGrpc.SearchDatabaseReply.ErrorsFieldNumber = 6 [static]
```

Field number for the "errors" field.

### 7.78.3.3 ProgressFieldNumber

```
const int briar.BriarGrpc.SearchDatabaseReply.ProgressFieldNumber = 7 [static]
```

Field number for the "progress" field.

### 7.78.3.4 SimilaritiesFieldNumber

```
const int briar.BriarGrpc.SearchDatabaseReply.SimilaritiesFieldNumber = 1 [static]
```

Field number for the "similarities" field.

## 7.78.4 Property Documentation

### 7.78.4.1 Descriptor

```
pbr.MessageDescriptor briar.BriarGrpc.SearchDatabaseReply.Descriptor [static], [get]
```

### 7.78.4.2 Durations

```
pbc.RepeatedField<global.briar.BriarGrpc.BriarDurations> briar.BriarGrpc.SearchDatabaseReply.Durations [get]
```

Log the time needed to complete the request on the server

### 7.78.4.3 Errors

```
global.briar.BriarGrpc.BriarErrors briar.BriarGrpc.SearchDatabaseReply.Errors [get], [set]
```

### 7.78.4.4 Parser

```
pb.MessageParser<SearchDatabaseReply> briar.BriarGrpc.SearchDatabaseReply.Parser [static], [get]
```

### 7.78.4.5 Progress

```
global.briar.BriarGrpc.BriarProgress briar.BriarGrpc.SearchDatabaseReply.Progress [get], [set]
```

OPTIONAL: provides progress updates for progress bar display.

See example code for details

#### 7.78.4.6 Similarities

```
pbc.RepeatedField<global.briar.BriarGrpc.SearchMatchList> briar.BriarGrpc.SearchDatabase↔  
Reply.Similarities [get]
```

REQUIRED: Return: List of similarities in scored order

- void [MergeFrom](#) ([SearchDatabaseRequest](#) other)
- [SearchDatabaseRequest](#) ()
- [SearchDatabaseRequest](#) ([SearchDatabaseRequest](#) other)
- override string [ToString](#) ()
- void [WriteTo](#) (pb::CodedOutputStream output)

## Static Public Attributes

- const int [DatabaseFieldNumber](#) = 4  
*Field number for the "database" field.*
- const int [DurationsFieldNumber](#) = 8  
*Field number for the "durations" field.*
- const int [ProbeDatabaseFieldNumber](#) = 7  
*Field number for the "probe\_database" field.*
- const int [ProbeEntryIdsFieldNumber](#) = 12  
*Field number for the "probe\_entry\_ids" field.*
- const int [SearchOptionsFieldNumber](#) = 11  
*Field number for the "search\_options" field.*

## Properties

- global::briar.BriarGrpc.BriarDatabase [Database](#) [get, set]  
*REQUIRED: Database to search*
- static pb::MessageDescriptor [Descriptor](#) [get]
- global::briar.BriarGrpc.BriarDurations [Durations](#) [get, set]  
*Log the time needed to complete the request on the server*
- static pb::MessageParser< [SearchDatabaseRequest](#) > [Parser](#) [get]
- global::briar.BriarGrpc.BriarDatabase [ProbeDatabase](#) [get, set]  
*REQUIRED: probe database to use as probe entries, instead of a [BriarMedia](#)*
- pb::RepeatedField< string > [ProbeEntryIds](#) [get]  
*OPTIONAL: the list of probe database entries to search.*
- global::briar.BriarGrpc.SearchOptions [SearchOptions](#) [get, set]  
*search options from the API call*

### 7.79.1 Detailed Description

This is a search that takes a gallery database and a probe database, and searches all probes against the gallery

### 7.79.2 Constructor & Destructor Documentation

### 7.79.2.1 SearchDatabaseRequest() [1/2]

```
briar.BriarGrpc.SearchDatabaseRequest.SearchDatabaseRequest ( ) [inline]
```

### 7.79.2.2 SearchDatabaseRequest() [2/2]

```
briar.BriarGrpc.SearchDatabaseRequest.SearchDatabaseRequest (
    SearchDatabaseRequest other ) [inline]
```

## 7.79.3 Member Function Documentation

### 7.79.3.1 CalculateSize()

```
int briar.BriarGrpc.SearchDatabaseRequest.CalculateSize ( ) [inline]
```

### 7.79.3.2 Clone()

```
SearchDatabaseRequest briar.BriarGrpc.SearchDatabaseRequest.Clone ( ) [inline]
```

### 7.79.3.3 Equals() [1/2]

```
override bool briar.BriarGrpc.SearchDatabaseRequest.Equals (
    object other ) [inline]
```

### 7.79.3.4 Equals() [2/2]

```
bool briar.BriarGrpc.SearchDatabaseRequest.Equals (
    SearchDatabaseRequest other ) [inline]
```

### 7.79.3.5 GetHashCode()

```
override int briar.BriarGrpc.SearchDatabaseRequest.GetHashCode ( ) [inline]
```

### 7.79.3.6 MergeFrom() [1/2]

```
void briar.BriarGrpc.SearchDatabaseRequest.MergeFrom (
    pb::CodedInputStream input ) [inline]
```

### 7.79.3.7 MergeFrom() [2/2]

```
void briar.BriarGrpc.SearchDatabaseRequest.MergeFrom (
    SearchDatabaseRequest other ) [inline]
```

### 7.79.3.8 ToString()

```
override string briar.BriarGrpc.SearchDatabaseRequest.ToString ( ) [inline]
```

### 7.79.3.9 WriteTo()

```
void briar.BriarGrpc.SearchDatabaseRequest.WriteTo (
    pb::CodedOutputStream output ) [inline]
```

## 7.79.4 Member Data Documentation

### 7.79.4.1 DatabaseFieldNumber

```
const int briar.BriarGrpc.SearchDatabaseRequest.DatabaseFieldNumber = 4 [static]
```

Field number for the "database" field.

### 7.79.4.2 DurationsFieldNumber

```
const int briar.BriarGrpc.SearchDatabaseRequest.DurationsFieldNumber = 8 [static]
```

Field number for the "durations" field.

### 7.79.4.3 ProbeDatabaseFieldNumber

```
const int briar.BriarGrpc.SearchDatabaseRequest.ProbeDatabaseFieldNumber = 7 [static]
```

Field number for the "probe\_database" field.

### 7.79.4.4 ProbeEntryIdsFieldNumber

```
const int briar.BriarGrpc.SearchDatabaseRequest.ProbeEntryIdsFieldNumber = 12 [static]
```

Field number for the "probe\_entry\_ids" field.

### 7.79.4.5 SearchOptionsFieldNumber

```
const int briar.BriarGrpc.SearchDatabaseRequest.SearchOptionsFieldNumber = 11 [static]
```

Field number for the "search\_options" field.

## 7.79.5 Property Documentation

### 7.79.5.1 Database

```
global.briar.BriarGrpc.BriarDatabase briar.BriarGrpc.SearchDatabaseRequest.Database [get],  
[set]
```

REQUIRED: Database to search

### 7.79.5.2 Descriptor

```
pbr.MessageDescriptor briar.BriarGrpc.SearchDatabaseRequest.Descriptor [static], [get]
```

### 7.79.5.3 Durations

```
global.briar.BriarGrpc.BriarDurations briar.BriarGrpc.SearchDatabaseRequest.Durations [get],  
[set]
```

Log the time needed to complete the request on the server

#### 7.79.5.4 Parser

```
pb.MessageParser<SearchDatabaseRequest> briar.BriarGrpc.SearchDatabaseRequest.Parser [static],  
[get]
```

#### 7.79.5.5 ProbeDatabase

```
global.briar.BriarGrpc.BriarDatabase briar.BriarGrpc.SearchDatabaseRequest.ProbeDatabase [get],  
[set]
```

REQUIRED: probe database to to use as probe entries, instead of a [BriarMedia](#)

#### 7.79.5.6 ProbeEntryIds

```
pbc.RepeatedField<string> briar.BriarGrpc.SearchDatabaseRequest.ProbeEntryIds [get]
```

OPTIONAL: the list of probe database entries to search.

If empty search the entire probe database.

#### 7.79.5.7 SearchOptions

```
global.briar.BriarGrpc.SearchOptions briar.BriarGrpc.SearchDatabaseRequest.SearchOptions [get],  
[set]
```

search options from the API call

## 7.80.1 Detailed Description

Information about a match

## 7.80.2 Constructor & Destructor Documentation

### 7.80.2.1 SearchMatchInfo() [1/2]

```
briar.BriarGrpc.SearchMatchInfo.SearchMatchInfo ( ) [inline]
```

### 7.80.2.2 SearchMatchInfo() [2/2]

```
briar.BriarGrpc.SearchMatchInfo.SearchMatchInfo (
    SearchMatchInfo other ) [inline]
```

## 7.80.3 Member Function Documentation

### 7.80.3.1 CalculateSize()

```
int briar.BriarGrpc.SearchMatchInfo.CalculateSize ( ) [inline]
```

### 7.80.3.2 Clone()

```
SearchMatchInfo briar.BriarGrpc.SearchMatchInfo.Clone ( ) [inline]
```

### 7.80.3.3 Equals() [1/2]

```
override bool briar.BriarGrpc.SearchMatchInfo.Equals (
    object other ) [inline]
```

### 7.80.3.4 Equals() [2/2]

```
bool briar.BriarGrpc.SearchMatchInfo.Equals (
    SearchMatchInfo other ) [inline]
```

### 7.80.3.5 GetHashCode()

```
override int briar.BriarGrpc.SearchMatchInfo.GetHashCode ( ) [inline]
```

### 7.80.3.6 MergeFrom() [1/2]

```
void briar.BriarGrpc.SearchMatchInfo.MergeFrom (
    pb::CodedInputStream input ) [inline]
```

### 7.80.3.7 MergeFrom() [2/2]

```
void briar.BriarGrpc.SearchMatchInfo.MergeFrom (
    SearchMatchInfo other ) [inline]
```

### 7.80.3.8 ToString()

```
override string briar.BriarGrpc.SearchMatchInfo.ToString ( ) [inline]
```

### 7.80.3.9 WriteTo()

```
void briar.BriarGrpc.SearchMatchInfo.WriteTo (
    pb::CodedOutputStream output ) [inline]
```

## 7.80.4 Member Data Documentation

### 7.80.4.1 BodyFieldNumber

```
const int briar.BriarGrpc.SearchMatchInfo.BodyFieldNumber = 12 [static]
```

Field number for the "body" field.

### 7.80.4.2 EntryIdGalleryFieldNumber

```
const int briar.BriarGrpc.SearchMatchInfo.EntryIdGalleryFieldNumber = 9 [static]
```

Field number for the "entry\_id\_gallery" field.

### 7.80.4.3 EntryIdProbeFieldNumber

```
const int briar.BriarGrpc.SearchMatchInfo.EntryIdProbeFieldNumber = 8 [static]
```

Field number for the "entry\_id\_probe" field.

### 7.80.4.4 FaceFieldNumber

```
const int briar.BriarGrpc.SearchMatchInfo.FaceFieldNumber = 11 [static]
```

Field number for the "face" field.

### 7.80.4.5 GateFieldNumber

```
const int briar.BriarGrpc.SearchMatchInfo.GateFieldNumber = 13 [static]
```

Field number for the "gate" field.

#### 7.80.4.6 IntegerSubjectIdGalleryFieldNumber

```
const int briar.BriarGrpc.SearchMatchInfo.IntegerSubjectIdGalleryFieldNumber = 15 [static]
```

Field number for the "integer\_subject\_id\_gallery" field.

#### 7.80.4.7 MediaIdFieldNumber

```
const int briar.BriarGrpc.SearchMatchInfo.MediaIdFieldNumber = 6 [static]
```

Field number for the "media\_id" field.

#### 7.80.4.8 ScoreFieldNumber

```
const int briar.BriarGrpc.SearchMatchInfo.ScoreFieldNumber = 1 [static]
```

Field number for the "score" field.

#### 7.80.4.9 SubjectIdGalleryFieldNumber

```
const int briar.BriarGrpc.SearchMatchInfo.SubjectIdGalleryFieldNumber = 5 [static]
```

Field number for the "subject\_id\_gallery" field.

#### 7.80.4.10 SubjectIdProbeFieldNumber

```
const int briar.BriarGrpc.SearchMatchInfo.SubjectIdProbeFieldNumber = 4 [static]
```

Field number for the "subject\_id\_probe" field.

#### 7.80.4.11 SubjectNameFieldNumber

```
const int briar.BriarGrpc.SearchMatchInfo.SubjectNameFieldNumber = 7 [static]
```

Field number for the "subject\_name" field.

#### 7.80.4.12 TheoreticalMaxFieldNumber

```
const int briar.BriarGrpc.SearchMatchInfo.TheoreticalMaxFieldNumber = 3 [static]
```

Field number for the "theoretical\_max" field.

#### 7.80.4.13 TheoreticalMinFieldNumber

```
const int briar.BriarGrpc.SearchMatchInfo.TheoreticalMinFieldNumber = 2 [static]
```

Field number for the "theoretical\_min" field.

#### 7.80.4.14 UsesIntegerSubjectIdGalleryFieldNumber

```
const int briar.BriarGrpc.SearchMatchInfo.UsesIntegerSubjectIdGalleryFieldNumber = 14 [static]
```

Field number for the "uses\_integer\_subject\_id\_gallery" field.

### 7.80.5 Property Documentation

#### 7.80.5.1 Body

```
global.briar.BriarGrpc.BriarMedia briar.BriarGrpc.SearchMatchInfo.Body [get], [set]
```

OPTIONAL: Image of Body

#### 7.80.5.2 Descriptor

```
pbr.MessageDescriptor briar.BriarGrpc.SearchMatchInfo.Descriptor [static], [get]
```

#### 7.80.5.3 EntryIdGallery

```
string briar.BriarGrpc.SearchMatchInfo.EntryIdGallery [get], [set]
```

OPTIONAL: the database entry id of the gallery

#### 7.80.5.4 EntryIdProbe

```
string briar.BriarGrpc.SearchMatchInfo.EntryIdProbe [get], [set]
```

OPTIONAL: the database entry id of the probe

#### 7.80.5.5 Face

```
global.briar.BriarGrpc.BriarMedia briar.BriarGrpc.SearchMatchInfo.Face [get], [set]
```

OPTIONAL: Image of face

#### 7.80.5.6 Gate

```
global.briar.BriarGrpc.BriarMedia briar.BriarGrpc.SearchMatchInfo.Gate [get], [set]
```

OPTIONAL: Image(s) of gait

#### 7.80.5.7 IntegerSubjectIdGallery

```
int briar.BriarGrpc.SearchMatchInfo.IntegerSubjectIdGallery [get], [set]
```

DEPRECATED: FOR LEGACY SYSTEMS ONLY indicates that the gallery ID returned is of integer form

#### 7.80.5.8 MediaId

```
string briar.BriarGrpc.SearchMatchInfo.MediaId [get], [set]
```

OPTIONAL: ID of media that probe matched to

#### 7.80.5.9 Parser

```
pb.MessageParser<SearchMatchInfo> briar.BriarGrpc.SearchMatchInfo.Parser [static], [get]
```

### 7.80.5.10 Score

`float briar.BriarGrpc.SearchMatchInfo.Score [get], [set]`

Match Similarity

### 7.80.5.11 SubjectIdGallery

`string briar.BriarGrpc.SearchMatchInfo.SubjectIdGallery [get], [set]`

REQUIRED: subject ID of matched gallery subject

### 7.80.5.12 SubjectIdProbe

`string briar.BriarGrpc.SearchMatchInfo.SubjectIdProbe [get], [set]`

DEPRECATED AND OPTIONAL: subject ID of probe image (if known, since usually probes do not have known subjects)

### 7.80.5.13 SubjectName

`string briar.BriarGrpc.SearchMatchInfo.SubjectName [get], [set]`

Name of subject

### 7.80.5.14 TheoreticalMax

`float briar.BriarGrpc.SearchMatchInfo.TheoreticalMax [get], [set]`

OPTIONAL: the maximum score the algorithm can return

### 7.80.5.15 TheoreticalMin

`float briar.BriarGrpc.SearchMatchInfo.TheoreticalMin [get], [set]`

OPTIONAL: the minimum score that the algorithm can return

### 7.80.5.16 UsesIntegerSubjectIdGallery

```
bool briar.BriarGrpc.SearchMatchInfo.UsesIntegerSubjectIdGallery [get], [set]
```

DEPRECATED: FOR LEGACY SYSTEMS ONLY indicates that the gallery ID returned is of integer form

    SearchOptions other ) [inline]
```

## 7.82.2 Member Function Documentation

### 7.82.2.1 CalculateSize()

```
int briar.BriarGrpc.SearchOptions.CalculateSize ( ) [inline]
```

### 7.82.2.2 Clone()

```
SearchOptions briar.BriarGrpc.SearchOptions.Clone ( ) [inline]
```

### 7.82.2.3 Equals() [1/2]

```
override bool briar.BriarGrpc.SearchOptions.Equals (
    object other ) [inline]
```

### 7.82.2.4 Equals() [2/2]

```
bool briar.BriarGrpc.SearchOptions.Equals (
    SearchOptions other ) [inline]
```

### 7.82.2.5 GetHashCode()

```
override int briar.BriarGrpc.SearchOptions.GetHashCode ( ) [inline]
```

### 7.82.2.6 MergeFrom() [1/2]

```
void briar.BriarGrpc.SearchOptions.MergeFrom (
    pb::CodedInputStream input ) [inline]
```

### 7.82.2.7 MergeFrom() [2/2]

```
void briar.BriarGrpc.SearchOptions.MergeFrom (
    SearchOptions other ) [inline]
```

### 7.82.2.8 ToString()

```
override string briar.BriarGrpc.SearchOptions.ToString ( ) [inline]
```

### 7.82.2.9 WriteTo()

```
void briar.BriarGrpc.SearchOptions.WriteTo (
    pb::CodedOutputStream output ) [inline]
```

## 7.82.3 Member Data Documentation

### 7.82.3.1 FlagFieldNumber

```
const int briar.BriarGrpc.SearchOptions.FlagFieldNumber = 10 [static]
```

Field number for the "flag" field.

### 7.82.3.2 FullFieldNumber

```
const int briar.BriarGrpc.SearchOptions.FullFieldNumber = 13 [static]
```

Field number for the "full" field.

### 7.82.3.3 MaxResultsFieldNumber

```
const int briar.BriarGrpc.SearchOptions.MaxResultsFieldNumber = 6 [static]
```

Field number for the "max\_results" field.

### 7.82.3.4 ModalityFieldNumber

```
const int briar.BriarGrpc.SearchOptions.ModalityFieldNumber = 12 [static]
```

Field number for the "modality" field.

### 7.82.3.5 OutDirFieldNumber

```
const int briar.BriarGrpc.SearchOptions.OutDirFieldNumber = 1 [static]
```

Field number for the "out\_dir" field.

### 7.82.3.6 OutputTypeFieldNumber

```
const int briar.BriarGrpc.SearchOptions.OutputTypeFieldNumber = 2 [static]
```

Field number for the "output\_type" field.

### 7.82.3.7 ProbeDatabaseFieldNumber

```
const int briar.BriarGrpc.SearchOptions.ProbeDatabaseFieldNumber = 4 [static]
```

Field number for the "probe\_database" field.

### 7.82.3.8 ReturnMatrixFieldNumber

```
const int briar.BriarGrpc.SearchOptions.ReturnMatrixFieldNumber = 14 [static]
```

Field number for the "return\_matrix" field.

### 7.82.3.9 ReturnMediaFieldNumber

```
const int briar.BriarGrpc.SearchOptions.ReturnMediaFieldNumber = 11 [static]
```

Field number for the "return\_media" field.

### 7.82.3.10 SearchBatchFieldNumber

```
const int briar.BriarGrpc.SearchOptions.SearchBatchFieldNumber = 7 [static]
```

Field number for the "search\_batch" field.

### 7.82.3.11 SearchDatabaseFieldNumber

```
const int briar.BriarGrpc.SearchOptions.SearchDatabaseFieldNumber = 3 [static]
```

Field number for the "search\_database" field.

### 7.82.3.12 SearchThresholdFieldNumber

```
const int briar.BriarGrpc.SearchOptions.SearchThresholdFieldNumber = 5 [static]
```

Field number for the "search\_threshold" field.

### 7.82.3.13 UseDetectionsFieldNumber

```
const int briar.BriarGrpc.SearchOptions.UseDetectionsFieldNumber = 8 [static]
```

Field number for the "use\_detections" field.

### 7.82.3.14 UseTemplatesFieldNumber

```
const int briar.BriarGrpc.SearchOptions.UseTemplatesFieldNumber = 9 [static]
```

Field number for the "use\_templates" field.

## 7.82.4 Property Documentation

### 7.82.4.1 Descriptor

```
pbr.MessageDescriptor briar.BriarGrpc.SearchOptions.Descriptor [static], [get]
```

### 7.82.4.2 Flag

```
global.briar.BriarGrpc.SearchFlags briar.BriarGrpc.SearchOptions.Flag [get], [set]
```

### 7.82.4.3 Full

```
global.briar.BriarGrpc.BoolOption briar.BriarGrpc.SearchOptions.Full [get], [set]
```

OPTIONAL: to perform a full MxN search instead of a K-core search

#### 7.82.4.4 MaxResults

```
global.briar.BriarGrpc.IntOption briar.BriarGrpc.SearchOptions.MaxResults [get], [set]
```

OPTIONAL: Maximum number of results per probe.

#### 7.82.4.5 Modality

```
global.briar.BriarGrpc.BiometricModality briar.BriarGrpc.SearchOptions.Modality [get], [set]
```

REQUIRED: If specified use this modality for search operations.

If "UNSPECIFIED" fuse modalities together.

#### 7.82.4.6 OutDir

```
global.briar.BriarGrpc.StringOption briar.BriarGrpc.SearchOptions.OutDir [get], [set]
```

Defines options to use for search operations.

#### 7.82.4.7 OutputType

```
global.briar.BriarGrpc.StringOption briar.BriarGrpc.SearchOptions.OutputType [get], [set]
```

DEPRICATED: ???.

Output the search logs

#### 7.82.4.8 Parser

```
pb.MessageParser<SearchOptions> briar.BriarGrpc.SearchOptions.Parser [static], [get]
```

#### 7.82.4.9 ProbeDatabase

```
global.briar.BriarGrpc.StringOption briar.BriarGrpc.SearchOptions.ProbeDatabase [get], [set]
```

DEPRICATED: Already in search request.

The database name to be used as the probe database (if none, it will not be used)

#### 7.82.4.10 ReturnMatrix

```
global.briar.BriarGrpc.BoolOption briar.BriarGrpc.SearchOptions.ReturnMatrix [get], [set]
```

OPTIONAL: to return the search matrix instead matchresults

#### 7.82.4.11 ReturnMedia

```
global.briar.BriarGrpc.BoolOption briar.BriarGrpc.SearchOptions.ReturnMedia [get], [set]
```

OPTIONAL: Should we return media (e.i.

cropped images) related to the detections back to the client?

#### 7.82.4.12 SearchBatch

```
global.briar.BriarGrpc.IntOption briar.BriarGrpc.SearchOptions.SearchBatch [get], [set]
```

DEPRICATED: ???.

batch size for search processes

#### 7.82.4.13 SearchDatabase

```
global.briar.BriarGrpc.StringOption briar.BriarGrpc.SearchOptions.SearchDatabase [get], [set]
```

DEPRICATED: Already in search request.

The database name to be used as the gallery/search database

#### 7.82.4.14 SearchThreshold

```
global.briar.BriarGrpc.FloatOption briar.BriarGrpc.SearchOptions.SearchThreshold [get], [set]
```

OPTIONAL: Exclude search results below this threshold.

Server should select a reasonable default if missing.

#### 7.82.4.15 UseDetections

```
global.briar.BriarGrpc.BoolOption briar.BriarGrpc.SearchOptions.UseDetections [get], [set]
```

### 7.82.4.16 UseTemplates

```
global.briar.BriarGrpc.BoolOption briar.BriarGrpc.SearchOptions.UseTemplates [get], [set]
```

The documentation for this class was generated from the following file:

```
void briar.BriarGrpc.SearchReply.WriteTo (  
    pb::CodedOutputStream output ) [inline]
```

## 7.83.3 Member Data Documentation

### 7.83.3.1 DetectReplyFieldNumber

```
const int briar.BriarGrpc.SearchReply.DetectReplyFieldNumber = 4 [static]
```

Field number for the "detect\_reply" field.

### 7.83.3.2 DurationsFieldNumber

```
const int briar.BriarGrpc.SearchReply.DurationsFieldNumber = 3 [static]
```

Field number for the "durations" field.

### 7.83.3.3 ErrorsFieldNumber

```
const int briar.BriarGrpc.SearchReply.ErrorsFieldNumber = 6 [static]
```

Field number for the "errors" field.

#### 7.83.3.4 ExtractReplyFieldNumber

```
const int briar.BriarGrpc.SearchReply.ExtractReplyFieldNumber = 5 [static]
```

Field number for the "extract\_reply" field.

#### 7.83.3.5 ProbeDetectionsFieldNumber

```
const int briar.BriarGrpc.SearchReply.ProbeDetectionsFieldNumber = 2 [static]
```

Field number for the "probe\_detections" field.

#### 7.83.3.6 ProgressFieldNumber

```
const int briar.BriarGrpc.SearchReply.ProgressFieldNumber = 7 [static]
```

Field number for the "progress" field.

#### 7.83.3.7 ProgressOnlyReplyFieldNumber

```
const int briar.BriarGrpc.SearchReply.ProgressOnlyReplyFieldNumber = 8 [static]
```

Field number for the "progress\_only\_reply" field.

#### 7.83.3.8 SimilaritiesFieldNumber

```
const int briar.BriarGrpc.SearchReply.SimilaritiesFieldNumber = 1 [static]
```

Field number for the "similarities" field.

### 7.83.4 Property Documentation

#### 7.83.4.1 Descriptor

```
pbr.MessageDescriptor briar.BriarGrpc.SearchReply.Descriptor [static], [get]
```

#### 7.83.4.2 DetectReply

```
global.briar.BriarGrpc.DetectReply briar.BriarGrpc.SearchReply.DetectReply [get], [set]
```

OPTIONAL: A detect reply to be populated if the service is sending intermediate detection results back to the client

#### 7.83.4.3 Durations

```
global.briar.BriarGrpc.BriarDurations briar.BriarGrpc.SearchReply.Durations [get], [set]
```

Log the time needed to complete the request on the server

#### 7.83.4.4 Errors

```
global.briar.BriarGrpc.BriarErrors briar.BriarGrpc.SearchReply.Errors [get], [set]
```

#### 7.83.4.5 ExtractReply

```
global.briar.BriarGrpc.ExtractReply briar.BriarGrpc.SearchReply.ExtractReply [get], [set]
```

OPTIONAL: An extract reply to be populated if the service is sending intermediate extraction results back to the client

#### 7.83.4.6 Parser

```
pb.MessageParser<SearchReply> briar.BriarGrpc.SearchReply.Parser [static], [get]
```

#### 7.83.4.7 ProbeDetections

```
pbc.RepeatedField<global.briar.BriarGrpc.Detection> briar.BriarGrpc.SearchReply.ProbeDetections [get]
```

OPTIONAL: Return: In the case of multiple probes within a single image, A list of detection locations on the probe image that the matchlists belong to

#### 7.83.4.8 Progress

```
global.briar.BriarGrpc.BriarProgress briar.BriarGrpc.SearchReply.Progress [get], [set]
```

OPTIONAL: provides progress updates for progress bar display.

See example code for details

#### 7.83.4.9 ProgressOnlyReply

```
bool briar.BriarGrpc.SearchReply.ProgressOnlyReply [get], [set]
```

REQUIRED: set to true if this is a reply only providing a progress update to the API.

If progress\_only\_reply is set to True, nothing else in the reply needs to be populated

#### 7.83.4.10 Similarities

```
pbc.RepeatedField<global.briar.BriarGrpc.SearchMatchList> briar.BriarGrpc.SearchReply.Similarities [get]
```

REQUIRED: Return: List list of similarities (results).

There should be one [SearchMatchList](#) per detected entity within the probe

- global::briar.BriarGrpc.TemplateList [Probes](#) [get, set]  
*SELECTION 2: Templates to search*
- global::briar.BriarGrpc.SearchOptions [SearchOptions](#) [get, set]

### 7.84.1 Detailed Description

There are three options on how to run a search.

Selection 1) Supply probe media and search for any people detected. Selection 2) Supply previously extracted templates. Selection 3) Supply a previously extracted database and search for probes in that database.

### 7.84.2 Constructor & Destructor Documentation

Field number for the "media" field.

#### 7.84.4.7 ProbesFieldNumber

```
const int briar.BriarGrpc.SearchRequest.ProbesFieldNumber = 3 [static]
```

Field number for the "probes" field.

#### 7.84.4.8 SearchOptionsFieldNumber

```
const int briar.BriarGrpc.SearchRequest.SearchOptionsFieldNumber = 11 [static]
```

Field number for the "search\_options" field.

### 7.84.5 Property Documentation

#### 7.84.5.1 Database

```
global.briar.BriarGrpc.BriarDatabase briar.BriarGrpc.SearchRequest.Database [get], [set]
```

REQUIRED: Database to search

#### 7.84.5.2 Descriptor

```
pbr.MessageDescriptor briar.BriarGrpc.SearchRequest.Descriptor [static], [get]
```

### 7.84.5.3 Detections

```
pb.RepeatedField<global.briar.BriarGrpc.Detection> briar.BriarGrpc.SearchRequest.Detections  
[get]
```

OPTIONAL: [Detection](#) to extract probe template from

### 7.84.5.4 DetectOptions

```
global.briar.BriarGrpc.DetectOptions briar.BriarGrpc.SearchRequest.DetectOptions [get],  
[set]
```

### 7.84.5.5 Durations

```
global.briar.BriarGrpc.BriarDurations briar.BriarGrpc.SearchRequest.Durations [get], [set]
```

Log the time needed to complete the request on the server

### 7.84.5.6 ExtractOptions

```
global.briar.BriarGrpc.ExtractOptions briar.BriarGrpc.SearchRequest.ExtractOptions [get],  
[set]
```

### 7.84.5.7 Media

```
global.briar.BriarGrpc.BriarMedia briar.BriarGrpc.SearchRequest.Media [get], [set]
```

SELECTION 1: Image to extract probe template from

### 7.84.5.8 Parser

```
pb.MessageParser<SearchRequest> briar.BriarGrpc.SearchRequest.Parser [static], [get]
```

#### 7.84.5.9 Probes

```
global.briar.BriarGrpc.TemplateList briar.BriarGrpc.SearchRequest.Probes [get], [set]
```

SELECTION 2: Templates to search

#### 7.84.5.10 SearchOptions

```
global.briar.BriarGrpc.SearchOptions briar.BriarGrpc.SearchRequest.SearchOptions [get], [set]
```

- static pb::MessageParser< [StatusReply](#) > [Parser](#) [get]
- string [ServiceName](#) [get, set]  
*REQUIRED: The name of the service software.*
- global::briar.BriarGrpc.BriarServiceStatus [Status](#) [get, set]  
*REQUIRED: Used to communicate the status of the service.*
- global::briar.BriarGrpc.APIVersion [Version](#) [get, set]  
*REQUIRED: The specific version for this service.*

### 7.85.1 Detailed Description

Returns basic status and information on the service and its version as well as additional options and features supported.

### 7.85.2 Constructor & Destructor Documentation

#### 7.85.2.1 StatusReply() [1/2]

```
briar.BriarGrpc.StatusReply.StatusReply ( ) [inline]
```

#### 7.85.2.2 StatusReply() [2/2]

```
briar.BriarGrpc.StatusReply.StatusReply (
    StatusReply other ) [inline]
```

### 7.85.3 Member Function Documentation

#### 7.85.3.1 CalculateSize()

```
int briar.BriarGrpc.StatusReply.CalculateSize ( ) [inline]
```

#### 7.85.3.2 Clone()

```
StatusReply briar.BriarGrpc.StatusReply.Clone ( ) [inline]
```

#### 7.85.3.3 Equals() [1/2]

```
override bool briar.BriarGrpc.StatusReply.Equals (
    object other ) [inline]
```

#### 7.85.3.4 Equals() [2/2]

```
bool briar.BriarGrpc.StatusReply.Equals (
    StatusReply other ) [inline]
```

#### 7.85.3.5 GetHashCode()

```
override int briar.BriarGrpc.StatusReply.GetHashCode ( ) [inline]
```

#### 7.85.3.6 MergeFrom() [1/2]

```
void briar.BriarGrpc.StatusReply.MergeFrom (
    pb::CodedInputStream input ) [inline]
```

#### 7.85.3.7 MergeFrom() [2/2]

```
void briar.BriarGrpc.StatusReply.MergeFrom (
    StatusReply other ) [inline]
```

#### 7.85.3.8 ToString()

```
override string briar.BriarGrpc.StatusReply.ToString ( ) [inline]
```

#### 7.85.3.9 WriteTo()

```
void briar.BriarGrpc.StatusReply.WriteTo (
    pb::CodedOutputStream output ) [inline]
```

### 7.85.4 Member Data Documentation

#### 7.85.4.1 ApiVersionFieldNumber

```
const int briar.BriarGrpc.StatusReply.ApiVersionFieldNumber = 5 [static]
```

Field number for the "api\_version" field.

#### 7.85.4.2 ConfigurationFieldNumber

```
const int briar.BriarGrpc.StatusReply.ConfigurationFieldNumber = 7 [static]
```

Field number for the "configuration" field.

#### 7.85.4.3 DeveloperNameFieldNumber

```
const int briar.BriarGrpc.StatusReply.DeveloperNameFieldNumber = 1 [static]
```

Field number for the "developer\_name" field.

#### 7.85.4.4 DevShortFieldNumber

```
const int briar.BriarGrpc.StatusReply.DevShortFieldNumber = 2 [static]
```

Field number for the "dev\_short" field.

#### 7.85.4.5 ServiceNameFieldNumber

```
const int briar.BriarGrpc.StatusReply.ServiceNameFieldNumber = 3 [static]
```

Field number for the "service\_name" field.

#### 7.85.4.6 StatusFieldNumber

```
const int briar.BriarGrpc.StatusReply.StatusFieldNumber = 6 [static]
```

Field number for the "status" field.

#### 7.85.4.7 VersionFieldName

```
const int briar.BriarGrpc.StatusReply.VersionFieldName = 4 [static]
```

Field number for the "version" field.

### 7.85.5 Property Documentation

#### 7.85.5.1 ApiVersion

```
global.briar.BriarGrpc.ApiVersion briar.BriarGrpc.StatusReply.ApiVersion [get], [set]
```

REQUIRED: The specific version for this service.

#### 7.85.5.2 Configuration

```
pbc.RepeatedField<global.briar.BriarGrpc.Attribute> briar.BriarGrpc.StatusReply.Configuration  
[get]
```

Optional features or options that can be communicated to clients.

This could communicate preferences or settings for the service and additional metadata.

#### 7.85.5.3 Descriptor

```
pbr.MessageDescriptor briar.BriarGrpc.StatusReply.Descriptor [static], [get]
```

#### 7.85.5.4 DeveloperName

```
string briar.BriarGrpc.StatusReply.DeveloperName [get], [set]
```

REQUIRED: The name of the developer of the service.

#### 7.85.5.5 DevShort

```
string briar.BriarGrpc.StatusReply.DevShort [get], [set]
```

OPTIONAL: The shortened or abbreviated name of name of the developer of the service.

#### 7.85.5.6 Parser

```
pb.MessageParser<StatusReply> briar.BriarGrpc.StatusReply.Parser [static], [get]
```

#### 7.85.5.7 ServiceName

```
string briar.BriarGrpc.StatusReply.ServiceName [get], [set]
```

REQUIRED: The name of the service software.

#### 7.85.5.8 Status

```
global.briar.BriarGrpc.BriarServiceStatus briar.BriarGrpc.StatusReply.Status [get], [set]
```

REQUIRED: Used to communicate the status of the service.

This should typically return READY.

#### 7.85.5.9 Version

```
global.briar.BriarGrpc.APIVersion briar.BriarGrpc.StatusReply.Version [get], [set]
```

REQUIRED: The specific version for this service.

The documentation for this class was generated from the following file:

- [StatusRequest](#) ([StatusRequest](#) other)
- override string [ToString](#) ()
- void [WriteTo](#) (pb::CodedOutputStream output)

## Properties

- static pb::MessageDescriptor [Descriptor](#) [get]
- static pb::MessageParser< [StatusRequest](#) > [Parser](#) [get]

### 7.86.1 Detailed Description

Request status on the service.

This is currently an empty message.

### 7.86.2 Constructor & Destructor Documentation

#### 7.86.2.1 StatusRequest() [1/2]

```
briar.BriarGrpc.StatusRequest.StatusRequest ( ) [inline]
```

### 7.86.2.2 StatusRequest() [2/2]

```
briar.BriarGrpc.StatusRequest.StatusRequest (
    StatusRequest other ) [inline]
```

## 7.86.3 Member Function Documentation

### 7.86.3.1 CalculateSize()

```
int briar.BriarGrpc.StatusRequest.CalculateSize ( ) [inline]
```

### 7.86.3.2 Clone()

```
StatusRequest briar.BriarGrpc.StatusRequest.Clone ( ) [inline]
```

### 7.86.3.3 Equals() [1/2]

```
override bool briar.BriarGrpc.StatusRequest.Equals (
    object other ) [inline]
```

### 7.86.3.4 Equals() [2/2]

```
bool briar.BriarGrpc.StatusRequest.Equals (
    StatusRequest other ) [inline]
```

### 7.86.3.5 GetHashCode()

```
override int briar.BriarGrpc.StatusRequest.GetHashCode ( ) [inline]
```

### 7.86.3.6 MergeFrom() [1/2]

```
void briar.BriarGrpc.StatusRequest.MergeFrom (
    pb::CodedInputStream input ) [inline]
```

### 7.86.3.7 MergeFrom() [2/2]

```
void briar.BriarGrpc.StatusRequest.MergeFrom (  
    StatusRequest other ) [inline]
```

### 7.86.3.8 ToString()

```
override string briar.BriarGrpc.StatusRequest.ToString ( ) [inline]
```

### 7.86.3.9 WriteTo()

```
void briar.BriarGrpc.StatusRequest.WriteTo (  
    pb::CodedOutputStream output ) [inline]
```

## 7.86.4 Property Documentation

### 7.86.4.1 Descriptor

```
pbr.MessageDescriptor briar.BriarGrpc.StatusRequest.Descriptor [static], [get]
```

### 7.86.4.2 Parser

```
pb.MessageParser<StatusRequest> briar.BriarGrpc.StatusRequest.Parser [static], [get]
```

*Field number for the "metadata" field.*
- const int [ModalityFieldNumber](#) = 9  
*Field number for the "modality" field.*
- const int [PartsFieldNumber](#) = 5  
*Field number for the "parts" field.*

## Properties

- string [Algorithm](#) [get, set]  
*OPTIONAL: Document which algorithm or machine learning model was used to create the signature vector.*
- long [AssociatedDetectionId](#) [get, set]  
*REQUIRED: The detection ID that this template is associated to*
- long [AssociatedTrackletId](#) [get, set]  
*REQUIRED: The tracklet ID that this template is associated to, if only detections are used leave this blank*
- pb::ByteString [Buffer](#) [get, set]  
*OPTIONAL: General storage.*
- global::briar.BriarGrpc.BriarVector [Data](#) [get, set]  
*OPTIONAL: Simple templates can use a standard floating point feature vector.*
- static pb::MessageDescriptor [Descriptor](#) [get]
- string [Id](#) [get, set]  
*REQUIRED: String identifier associated with template.*
- pb::RepeatedField< global::briar.BriarGrpc.Attribute > [Metadata](#) [get]  
*OPTIONAL: Unstructured mapping to store additional data about the record as needed.*
- global::briar.BriarGrpc.BiometricModality [Modality](#) [get, set]
- static pb::MessageParser< [Template](#) > [Parser](#) [get]
- pb::RepeatedField< global::briar.BriarGrpc.TemplateData > [Parts](#) [get]  
*RECOMMENDED: Mapping to store multipart or multiple modality templates.*

### 7.88.1 Detailed Description

Data structure to hold signature generated from an extraction.

Typically just populate one of "parts", "data", or "buffer".

## 7.88.2 Constructor & Destructor Documentation

### 7.88.2.1 Template() [1/2]

```
briar.BriarGrpc.Template.Template ( ) [inline]
```

### 7.88.2.2 Template() [2/2]

```
briar.BriarGrpc.Template.Template (
    Template other ) [inline]
```

## 7.88.3 Member Function Documentation

### 7.88.3.1 CalculateSize()

```
int briar.BriarGrpc.Template.CalculateSize ( ) [inline]
```

### 7.88.3.2 Clone()

```
Template briar.BriarGrpc.Template.Clone ( ) [inline]
```

### 7.88.3.3 Equals() [1/2]

```
override bool briar.BriarGrpc.Template.Equals (
    object other ) [inline]
```

### 7.88.3.4 Equals() [2/2]

```
bool briar.BriarGrpc.Template.Equals (
    Template other ) [inline]
```

### 7.88.3.5 GetHashCode()

```
override int briar.BriarGrpc.Template.GetHashCode ( ) [inline]
```

### 7.88.3.6 MergeFrom() [1/2]

```
void briar.BriarGrpc.Template.MergeFrom (
    pb::CodedInputStream input ) [inline]
```

### 7.88.3.7 MergeFrom() [2/2]

```
void briar.BriarGrpc.Template.MergeFrom (
    Template other ) [inline]
```

### 7.88.3.8 ToString()

```
override string briar.BriarGrpc.Template.ToString ( ) [inline]
```

### 7.88.3.9 WriteTo()

```
void briar.BriarGrpc.Template.WriteTo (
    pb::CodedOutputStream output ) [inline]
```

## 7.88.4 Member Data Documentation

### 7.88.4.1 AlgorithmFieldNumber

```
const int briar.BriarGrpc.Template.AlgorithmFieldNumber = 4 [static]
```

Field number for the "algorithm" field.

#### 7.88.4.2 AssociatedDetectionIdFieldNumber

```
const int briar.BriarGrpc.Template.AssociatedDetectionIdFieldNumber = 2 [static]
```

Field number for the "associated\_detection\_id" field.

#### 7.88.4.3 AssociatedTrackletIdFieldNumber

```
const int briar.BriarGrpc.Template.AssociatedTrackletIdFieldNumber = 3 [static]
```

Field number for the "associated\_tracklet\_id" field.

#### 7.88.4.4 BufferFieldNumber

```
const int briar.BriarGrpc.Template.BufferFieldNumber = 7 [static]
```

Field number for the "buffer" field.

#### 7.88.4.5 DataFieldNumber

```
const int briar.BriarGrpc.Template.DataFieldNumber = 6 [static]
```

Field number for the "data" field.

#### 7.88.4.6 IdFieldNumber

```
const int briar.BriarGrpc.Template.IdFieldNumber = 1 [static]
```

Field number for the "id" field.

#### 7.88.4.7 MetadataFieldNumber

```
const int briar.BriarGrpc.Template.MetadataFieldNumber = 8 [static]
```

Field number for the "metadata" field.

#### 7.88.4.8 ModalityFieldNumber

```
const int briar.BriarGrpc.Template.ModalityFieldNumber = 9 [static]
```

Field number for the "modality" field.

#### 7.88.4.9 PartsFieldNumber

```
const int briar.BriarGrpc.Template.PartsFieldNumber = 5 [static]
```

Field number for the "parts" field.

### 7.88.5 Property Documentation

#### 7.88.5.1 Algorithm

```
string briar.BriarGrpc.Template.Algorithm [get], [set]
```

OPTIONAL: Document which algorithm or machine learning model was used to create the signature vector.

#### 7.88.5.2 AssociatedDetectionId

```
long briar.BriarGrpc.Template.AssociatedDetectionId [get], [set]
```

REQUIRED: The detection ID that this template is associated to

#### 7.88.5.3 AssociatedTrackletId

```
long briar.BriarGrpc.Template.AssociatedTrackletId [get], [set]
```

REQUIRED: The tracklet ID that this template is associated to, if only detections are used leave this blank

#### 7.88.5.4 Buffer

```
pb.ByteString briar.BriarGrpc.Template.Buffer [get], [set]
```

OPTIONAL: General storage.

Can be used for raw binary data templates or proprietary formats.

#### 7.88.5.5 Data

```
global.briar.BriarGrpc.BriarVector briar.BriarGrpc.Template.Data [get], [set]
```

OPTIONAL: Simple templates can use a standard floating point feature vector.

#### 7.88.5.6 Descriptor

```
pbr.MessageDescriptor briar.BriarGrpc.Template.Descriptor [static], [get]
```

#### 7.88.5.7 Id

```
string briar.BriarGrpc.Template.Id [get], [set]
```

REQUIRED: String identifier associated with template.

#### 7.88.5.8 Metadata

```
pbc.RepeatedField<global.briar.BriarGrpc.Attribute> briar.BriarGrpc.Template.Metadata [get]
```

OPTIONAL: Unstructured mapping to store additional data about the record as needed.

#### 7.88.5.9 Modality

```
global.briar.BriarGrpc.BiometricModality briar.BriarGrpc.Template.Modality [get], [set]
```

#### 7.88.5.10 Parser

```
pb.MessageParser<Template> briar.BriarGrpc.Template.Parser [static], [get]
```

#### 7.88.5.11 Parts

```
pbc.RepeatedField<global.briar.BriarGrpc.TemplateData> briar.BriarGrpc.Template.Parts [get]
```

RECOMMENDED: Mapping to store multipart or multiple modality templates.

The documentation for this class was generated from the following file:

- [/home/qdb/git/briar-api/lib/csharp/Briar.cs](#)

## 7.89 briar.BriarGrpc.TemplateData Class Reference

Mapping item to store a simple part of multipart/multimodal templates.

### 7.89.1 Detailed Description

Mapping item to store a simple part of multipart/multimodal templates.

The message contains mostly optional header and then algorithms will typically use just one data format (buffer, matrix, vector, etc.) to encode the associated signature data. Attributes can be used to store additional data as needed, i.e. yaw\_angle, pitch\_angle, resolution.

### 7.89.2 Constructor & Destructor Documentation

### 7.89.2.1 TemplateData() [1/2]

```
briar.BriarGrpc.TemplateData.TemplateData ( ) [inline]
```

### 7.89.2.2 TemplateData() [2/2]

```
briar.BriarGrpc.TemplateData.TemplateData (
    TemplateData other ) [inline]
```

## 7.89.3 Member Function Documentation

### 7.89.3.1 CalculateSize()

```
int briar.BriarGrpc.TemplateData.CalculateSize ( ) [inline]
```

### 7.89.3.2 Clone()

```
TemplateData briar.BriarGrpc.TemplateData.Clone ( ) [inline]
```

### 7.89.3.3 Equals() [1/2]

```
override bool briar.BriarGrpc.TemplateData.Equals (
    object other ) [inline]
```

### 7.89.3.4 Equals() [2/2]

```
bool briar.BriarGrpc.TemplateData.Equals (
    TemplateData other ) [inline]
```

### 7.89.3.5 GetHashCode()

```
override int briar.BriarGrpc.TemplateData.GetHashCode ( ) [inline]
```

### 7.89.3.6 MergeFrom() [1/2]

```
void briar.BriarGrpc.TemplateData.MergeFrom (
    pb::CodedInputStream input ) [inline]
```

### 7.89.3.7 MergeFrom() [2/2]

```
void briar.BriarGrpc.TemplateData.MergeFrom (
    TemplateData other ) [inline]
```

### 7.89.3.8 ToString()

```
override string briar.BriarGrpc.TemplateData.ToString ( ) [inline]
```

### 7.89.3.9 WriteTo()

```
void briar.BriarGrpc.TemplateData.WriteTo (
    pb::CodedOutputStream output ) [inline]
```

## 7.89.4 Member Data Documentation

### 7.89.4.1 DescriptionFieldNumber

```
const int briar.BriarGrpc.TemplateData.DescriptionFieldNumber = 2 [static]
```

Field number for the "description" field.

### 7.89.4.2 KeyFieldNumber

```
const int briar.BriarGrpc.TemplateData.KeyFieldNumber = 1 [static]
```

Field number for the "key" field.

#### 7.89.4.3 MetadataFieldName

```
const int briar.BriarGrpc.TemplateData.MetadataFieldName = 19 [static]
```

Field number for the "metadata" field.

#### 7.89.4.4 ModalityFieldName

```
const int briar.BriarGrpc.TemplateData.ModalityFieldName = 15 [static]
```

Field number for the "modality" field.

#### 7.89.4.5 SourceIdFieldName

```
const int briar.BriarGrpc.TemplateData.SourceIdFieldName = 17 [static]
```

Field number for the "source\_id" field.

#### 7.89.4.6 SubmodalityFieldName

```
const int briar.BriarGrpc.TemplateData.SubmodalityFieldName = 16 [static]
```

Field number for the "submodality" field.

#### 7.89.4.7 TrackletIdFieldName

```
const int briar.BriarGrpc.TemplateData.TrackletIdFieldName = 18 [static]
```

Field number for the "tracklet\_id" field.

### 7.89.5 Property Documentation

#### 7.89.5.1 Description

```
string briar.BriarGrpc.TemplateData.Description [get], [set]
```

OPTIONAL: A text description on the content or type hint

### 7.89.5.2 Descriptor

```
pbr.MessageDescriptor briar.BriarGrpc.TemplateData.Descriptor [static], [get]
```

### 7.89.5.3 Key

```
string briar.BriarGrpc.TemplateData.Key [get], [set]
```

REQUIRED: unique id for this data

### 7.89.5.4 Metadata

```
pbc.RepeatedField<global.briar.BriarGrpc.Attribute> briar.BriarGrpc.TemplateData.Metadata  
[get]
```

OPTIONAL: Unstructured mapping to store additional data about the record as needed.

### 7.89.5.5 Modality

```
global.briar.BriarGrpc.BiometricModality briar.BriarGrpc.TemplateData.Modality [get], [set]
```

RECOMMENDED: Biometric signature captured in the template

### 7.89.5.6 Parser

```
pb.MessageParser<TemplateData> briar.BriarGrpc.TemplateData.Parser [static], [get]
```

### 7.89.5.7 SourceId

```
string briar.BriarGrpc.TemplateData.SourceId [get], [set]
```

OPTIONAL: Link back to the media source of this data

### 7.89.5.8 Submodality

```
string briar.BriarGrpc.TemplateData.Submodality [get], [set]
```

OPTIONAL: more detail on the type of modality or signature if needed

### 7.89.5.9 TrackletId

```
string briar.BriarGrpc.TemplateData.TrackletId [get], [set]
```

OPTIONAL: Link back to the tracklet or detection associated with this data

Field number for the "attributes" field.

### 7.94.4.3 ModalityFieldNumber

```
const int briar.BriarGrpc.TrackingOptions.ModalityFieldNumber = 6 [static]
```

Field number for the "modality" field.

#### 7.94.4.4 ReturnMediaFieldNumber

```
const int briar.BriarGrpc.TrackingOptions.ReturnMediaFieldNumber = 5 [static]
```

Field number for the "return\_media" field.

#### 7.94.4.5 ThresholdFieldNumber

```
const int briar.BriarGrpc.TrackingOptions.ThresholdFieldNumber = 3 [static]
```

Field number for the "threshold" field.

#### 7.94.4.6 TrackingBatchFieldNumber

```
const int briar.BriarGrpc.TrackingOptions.TrackingBatchFieldNumber = 4 [static]
```

Field number for the "tracking\_batch" field.

#### 7.94.4.7 TrackingDisableFieldNumber

```
const int briar.BriarGrpc.TrackingOptions.TrackingDisableFieldNumber = 2 [static]
```

Field number for the "tracking\_disable" field.

### 7.94.5 Property Documentation

#### 7.94.5.1 AlgorithmId

```
global.briar.BriarGrpc.StringOption briar.BriarGrpc.TrackingOptions.AlgorithmId [get], [set]
```

uid corresponding to which algorithm to use

#### 7.94.5.2 Attributes

```
pb.RepeatedField<global.briar.BriarGrpc.Attribute> briar.BriarGrpc.TrackingOptions.Attributes  
[get]
```

Used for passing algorithm specific or custom options

### 7.94.5.3 Descriptor

`pbr.MessageDescriptor briar.BriarGrpc.TrackingOptions.Descriptor [static], [get]`

### 7.94.5.4 Modality

`global.briar.BriarGrpc.BiometricModality briar.BriarGrpc.TrackingOptions.Modality [get], [set]`

Whether tracking is for face or whole body

### 7.94.5.5 Parser

`pb.MessageParser<TrackingOptions> briar.BriarGrpc.TrackingOptions.Parser [static], [get]`

### 7.94.5.6 ReturnMedia

`global.briar.BriarGrpc.BoolOption briar.BriarGrpc.TrackingOptions.ReturnMedia [get], [set]`

`FloatOption` encoding = 4;

### 7.94.5.7 Threshold

`global.briar.BriarGrpc.FloatOption briar.BriarGrpc.TrackingOptions.Threshold [get], [set]`

min score for candidate consideration

### 7.94.5.8 TrackingBatch

`global.briar.BriarGrpc.IntOption briar.BriarGrpc.TrackingOptions.TrackingBatch [get], [set]`

batch size for tracking processes

#### 7.94.5.9 TrackingDisable

```
global.briar.BriarGrpc.BoolOption briar.BriarGrpc.TrackingOptions.TrackingDisable [get], [set]
```

min score for candidate consideration

### 7.95.1 Detailed Description

Represents a time-wise track of a detected instance

### 7.95.2 Constructor & Destructor Documentation

### 7.95.2.1 Tracklet() [1/2]

```
briar.BriarGrpc.Tracklet.Tracklet ( ) [inline]
```

### 7.95.2.2 Tracklet() [2/2]

```
briar.BriarGrpc.Tracklet.Tracklet (
    Tracklet other ) [inline]
```

## 7.95.3 Member Function Documentation

### 7.95.3.1 CalculateSize()

```
int briar.BriarGrpc.Tracklet.CalculateSize ( ) [inline]
```

### 7.95.3.2 Clone()

```
Tracklet briar.BriarGrpc.Tracklet.Clone ( ) [inline]
```

### 7.95.3.3 Equals() [1/2]

```
override bool briar.BriarGrpc.Tracklet.Equals (
    object other ) [inline]
```

### 7.95.3.4 Equals() [2/2]

```
bool briar.BriarGrpc.Tracklet.Equals (
    Tracklet other ) [inline]
```

### 7.95.3.5 GetHashCode()

```
override int briar.BriarGrpc.Tracklet.GetHashCode ( ) [inline]
```

### 7.95.3.6 MergeFrom() [1/2]

```
void briar.BriarGrpc.Tracklet.MergeFrom (
    pb::CodedInputStream input ) [inline]
```

### 7.95.3.7 MergeFrom() [2/2]

```
void briar.BriarGrpc.Tracklet.MergeFrom (
    Tracklet other ) [inline]
```

### 7.95.3.8 ToString()

```
override string briar.BriarGrpc.Tracklet.ToString ( ) [inline]
```

### 7.95.3.9 WriteTo()

```
void briar.BriarGrpc.Tracklet.WriteTo (
    pb::CodedOutputStream output ) [inline]
```

## 7.95.4 Member Data Documentation

### 7.95.4.1 AttributesFieldNumber

```
const int briar.BriarGrpc.Tracklet.AttributesFieldNumber = 2 [static]
```

Field number for the "attributes" field.

### 7.95.4.2 DetectionsFieldNumber

```
const int briar.BriarGrpc.Tracklet.DetectionsFieldNumber = 1 [static]
```

Field number for the "detections" field.

#### 7.95.4.3 OptionsFieldNumber

```
const int briar.BriarGrpc.Tracklet.OptionsFieldNumber = 5 [static]
```

Field number for the "options" field.

#### 7.95.4.4 TrackletClassFieldNumber

```
const int briar.BriarGrpc.Tracklet.TrackletClassFieldNumber = 3 [static]
```

Field number for the "tracklet\_class" field.

#### 7.95.4.5 TrackletIdFieldNumber

```
const int briar.BriarGrpc.Tracklet.TrackletIdFieldNumber = 4 [static]
```

Field number for the "tracklet\_id" field.

### 7.95.5 Property Documentation

#### 7.95.5.1 Attributes

```
pbc.RepeatedField<global.briar.BriarGrpc.Attribute> briar.BriarGrpc.Tracklet.Attributes [get]
```

OPTIONAL: attributes describing the tracklet

#### 7.95.5.2 Descriptor

```
pbr.MessageDescriptor briar.BriarGrpc.Tracklet.Descriptor [static], [get]
```

#### 7.95.5.3 Detections

```
pbc.RepeatedField<global.briar.BriarGrpc.Detection> briar.BriarGrpc.Tracklet.Detections [get]
```

REQUIRED: the set of detections defining the tracklet

#### 7.95.5.4 Options

```
global.briar.BriarGrpc.TrackingOptions briar.BriarGrpc.Tracklet.Options [get], [set]
```

OPTIONAL: persistent options used to call the tracker

#### 7.95.5.5 Parser

```
pb.MessageParser<Tracklet> briar.BriarGrpc.Tracklet.Parser [static], [get]
```

#### 7.95.5.6 TrackletClass

```
string briar.BriarGrpc.Tracklet.TrackletClass [get], [set]
```

DEPRICATED: use modality or attributes instead.

defines type of tracklet (body, face, features, etc...)

#### 7.95.5.7 TrackletId

```
long briar.BriarGrpc.Tracklet.TrackletId [get], [set]
```

the id of a tracklet for this media

## 7.96 briar.BriarGrpc.TrackReply Class Reference

Inheritance diagram for briar.BriarGrpc.TrackReply:

Collaboration diagram for `briar.BriarGrpc.TrackReply`:

## Public Member Functions

- `int CalculateSize ()`
- `TrackReply Clone ()`
- `override bool Equals (object other)`
- `bool Equals (TrackReply other)`
- `override int GetHashCode ()`
- `void MergeFrom (pb::CodedInputStream input)`
- `void MergeFrom (TrackReply other)`
- `override string ToString ()`
- `TrackReply ()`
- `TrackReply (TrackReply other)`
- `void WriteTo (pb::CodedOutputStream output)`

## Static Public Attributes

- `const int DurationsFieldNumber = 2`  
*Field number for the "durations" field.*
- `const int ErrorsFieldNumber = 7`  
*Field number for the "errors" field.*
- `const int FrameldsFieldNumber = 3`  
*Field number for the "frame\_ids" field.*
- `const int ModalityFieldNumber = 5`  
*Field number for the "modality" field.*
- `const int ProgressFieldNumber = 6`  
*Field number for the "progress" field.*
- `const int ProgressOnlyReplyFieldNumber = 8`  
*Field number for the "progress\_only\_reply" field.*
- `const int TrackletsFieldNumber = 1`  
*Field number for the "tracklets" field.*

## Properties

- static pbr::MessageDescriptor [Descriptor](#) [get]
- global::briar.BriarGrpc.BriarDurations [Durations](#) [get, set]
- global::briar.BriarGrpc.BriarErrors [Errors](#) [get, set]
- pbc::RepeatedField< long > [FrameIds](#) [get]  
*OPTIONAL: the frame IDs associated with the tracklets*
- global::briar.BriarGrpc.BiometricModality [Modality](#) [get, set]  
*OPTIONAL: the modality of the track extracted*
- static pb::MessageParser< [TrackReply](#) > [Parser](#) [get]
- global::briar.BriarGrpc.BriarProgress [Progress](#) [get, set]  
*OPTIONAL: provides progress updates for progress bar display.*
- bool [ProgressOnlyReply](#) [get, set]  
*REQUIRED: set to true if this is a reply only providing a progress update to the API.*
- pbc::RepeatedField< global::briar.BriarGrpc.Tracklet > [Tracklets](#) [get]  
*REQUIRED: set of returned tracklets*

## 7.96.1 Constructor & Destructor Documentation

### 7.96.1.1 TrackReply() [1/2]

```
briar.BriarGrpc.TrackReply.TrackReply ( ) [inline]
```

### 7.96.1.2 TrackReply() [2/2]

```
briar.BriarGrpc.TrackReply.TrackReply (
    TrackReply other ) [inline]
```

## 7.96.2 Member Function Documentation

### 7.96.2.1 CalculateSize()

```
int briar.BriarGrpc.TrackReply.CalculateSize ( ) [inline]
```

### 7.96.2.2 Clone()

```
TrackReply briar.BriarGrpc.TrackReply.Clone ( ) [inline]
```

### 7.96.2.3 Equals() [1/2]

```
override bool briar.BriarGrpc.TrackReply.Equals (  
    object other ) [inline]
```

### 7.96.2.4 Equals() [2/2]

```
bool briar.BriarGrpc.TrackReply.Equals (  
    TrackReply other ) [inline]
```

### 7.96.2.5 GetHashCode()

```
override int briar.BriarGrpc.TrackReply.GetHashCode ( ) [inline]
```

### 7.96.2.6 MergeFrom() [1/2]

```
void briar.BriarGrpc.TrackReply.MergeFrom (  
    pb::CodedInputStream input ) [inline]
```

### 7.96.2.7 MergeFrom() [2/2]

```
void briar.BriarGrpc.TrackReply.MergeFrom (  
    TrackReply other ) [inline]
```

### 7.96.2.8 ToString()

```
override string briar.BriarGrpc.TrackReply.ToString ( ) [inline]
```

### 7.96.2.9 WriteTo()

```
void briar.BriarGrpc.TrackReply.WriteTo (  
    pb::CodedOutputStream output ) [inline]
```

### 7.96.3 Member Data Documentation

#### 7.96.3.1 DurationsFieldName

```
const int briar.BriarGrpc.TrackReply.DurationsFieldName = 2 [static]
```

Field number for the "durations" field.

#### 7.96.3.2 ErrorsFieldName

```
const int briar.BriarGrpc.TrackReply.ErrorsFieldName = 7 [static]
```

Field number for the "errors" field.

#### 7.96.3.3 FrameIdsFieldName

```
const int briar.BriarGrpc.TrackReply.FrameIdsFieldName = 3 [static]
```

Field number for the "frame\_ids" field.

#### 7.96.3.4 ModalityFieldName

```
const int briar.BriarGrpc.TrackReply.ModalityFieldName = 5 [static]
```

Field number for the "modality" field.

#### 7.96.3.5 ProgressFieldName

```
const int briar.BriarGrpc.TrackReply.ProgressFieldName = 6 [static]
```

Field number for the "progress" field.

### 7.96.3.6 ProgressOnlyReplyFieldNumber

```
const int briar.BriarGrpc.TrackReply.ProgressOnlyReplyFieldNumber = 8 [static]
```

Field number for the "progress\_only\_reply" field.

### 7.96.3.7 TrackletsFieldNumber

```
const int briar.BriarGrpc.TrackReply.TrackletsFieldNumber = 1 [static]
```

Field number for the "tracklets" field.

## 7.96.4 Property Documentation

### 7.96.4.1 Descriptor

```
pbr.MessageDescriptor briar.BriarGrpc.TrackReply.Descriptor [static], [get]
```

### 7.96.4.2 Durations

```
global.briar.BriarGrpc.BriarDurations briar.BriarGrpc.TrackReply.Durations [get], [set]
```

### 7.96.4.3 Errors

```
global.briar.BriarGrpc.BriarErrors briar.BriarGrpc.TrackReply.Errors [get], [set]
```

### 7.96.4.4 Framelds

```
pbc.RepeatedField<long> briar.BriarGrpc.TrackReply.FrameIds [get]
```

OPTIONAL: the frame IDs associated with the tracklets

#### 7.96.4.5 Modality

```
global.briar.BriarGrpc.BiometricModality briar.BriarGrpc.TrackReply.Modality [get], [set]
```

OPTIONAL: the modality of the track extracted

#### 7.96.4.6 Parser

```
pb.MessageParser<TrackReply> briar.BriarGrpc.TrackReply.Parser [static], [get]
```

#### 7.96.4.7 Progress

```
global.briar.BriarGrpc.BriarProgress briar.BriarGrpc.TrackReply.Progress [get], [set]
```

OPTIONAL: provides progress updates for progress bar display.

See example code for details

#### 7.96.4.8 ProgressOnlyReply

```
bool briar.BriarGrpc.TrackReply.ProgressOnlyReply [get], [set]
```

REQUIRED: set to true if this is a reply only providing a progress update to the API.

If progress\_only\_reply is set to True, nothing else in the reply needs to be populated

#### 7.96.4.9 Tracklets

```
pbc.RepeatedField<global.briar.BriarGrpc.Tracklet> briar.BriarGrpc.TrackReply.Tracklets [get]
```

REQUIRED: set of returned tracklets

    pb::CodedInputStream input ) [inline]
```

### 7.98.2.7 MergeFrom() [2/2]

```
void briar.BriarGrpc.VerifyDatabaseReply.MergeFrom (
    VerifyDatabaseReply other ) [inline]
```

### 7.98.2.8 ToString()

```
override string briar.BriarGrpc.VerifyDatabaseReply.ToString ( ) [inline]
```

### 7.98.2.9 WriteTo()

```
void briar.BriarGrpc.VerifyDatabaseReply.WriteTo (
    pb::CodedOutputStream output ) [inline]
```

### 7.98.3 Member Data Documentation

#### 7.98.3.1 ErrorsFieldName

```
const int briar.BriarGrpc.VerifyDatabaseReply.ErrorsFieldName = 6 [static]
```

Field number for the "errors" field.

#### 7.98.3.2 MatchMatrixFieldName

```
const int briar.BriarGrpc.VerifyDatabaseReply.MatchMatrixFieldName = 9 [static]
```

Field number for the "match\_matrix" field.

#### 7.98.3.3 MatrixGalleryAttributesFieldName

```
const int briar.BriarGrpc.VerifyDatabaseReply.MatrixGalleryAttributesFieldName = 17 [static]
```

Field number for the "matrix\_gallery\_attributes" field.

#### 7.98.3.4 MatrixGalleryDetectionsFieldName

```
const int briar.BriarGrpc.VerifyDatabaseReply.MatrixGalleryDetectionsFieldName = 13 [static]
```

Field number for the "matrix\_gallery\_detections" field.

#### 7.98.3.5 MatrixGalleryTrackletsFieldName

```
const int briar.BriarGrpc.VerifyDatabaseReply.MatrixGalleryTrackletsFieldName = 15 [static]
```

Field number for the "matrix\_gallery\_tracklets" field.

### 7.98.3.6 MatrixProbeAttributesFieldNumber

```
const int briar.BriarGrpc.VerifyDatabaseReply.MatrixProbeAttributesFieldNumber = 16 [static]
```

Field number for the "matrix\_probe\_attributes" field.

### 7.98.3.7 MatrixProbeDetectionsFieldNumber

```
const int briar.BriarGrpc.VerifyDatabaseReply.MatrixProbeDetectionsFieldNumber = 12 [static]
```

Field number for the "matrix\_probe\_detections" field.

### 7.98.3.8 MatrixProbeTrackletsFieldNumber

```
const int briar.BriarGrpc.VerifyDatabaseReply.MatrixProbeTrackletsFieldNumber = 14 [static]
```

Field number for the "matrix\_probe\_tracklets" field.

### 7.98.3.9 ProgressFieldNumber

```
const int briar.BriarGrpc.VerifyDatabaseReply.ProgressFieldNumber = 7 [static]
```

Field number for the "progress" field.

### 7.98.3.10 UsesIntegerSubjectIdGalleryFieldNumber

```
const int briar.BriarGrpc.VerifyDatabaseReply.UsesIntegerSubjectIdGalleryFieldNumber = 5 [static]
```

Field number for the "uses\_integer\_subject\_id\_gallery" field.

## 7.98.4 Property Documentation

### 7.98.4.1 Descriptor

```
pbr.MessageDescriptor briar.BriarGrpc.VerifyDatabaseReply.Descriptor [static], [get]
```

### 7.98.4.2 Errors

```
global.briar.BriarGrpc.BriarErrors briar.BriarGrpc.VerifyDatabaseReply.Errors [get], [set]
```

### 7.98.4.3 MatchMatrix

```
global.briar.BriarGrpc.BriarMatrix briar.BriarGrpc.VerifyDatabaseReply.MatchMatrix [get],  
[set]
```

Required: A match matrix instead of a Matchlist

### 7.98.4.4 MatrixGalleryAttributes

```
pbc.MapField<string, global.briar.BriarGrpc.MediaMetadata> briar.BriarGrpc.VerifyDatabase↵  
Reply.MatrixGalleryAttributes [get]
```

Optional: extra gallery attributes

### 7.98.4.5 MatrixGalleryDetections

```
pbc.MapField<string, global.briar.BriarGrpc.Detection> briar.BriarGrpc.VerifyDatabaseReply.↵  
MatrixGalleryDetections [get]
```

Optional: A list of detections that correspond to all entries in the gallery database

### 7.98.4.6 MatrixGalleryTracklets

```
pbc.MapField<string, global.briar.BriarGrpc.Tracklet> briar.BriarGrpc.VerifyDatabaseReply.↵  
MatrixGalleryTracklets [get]
```

Optional: A list of tracklets that correspond to all entries in the gallery database

### 7.98.4.7 MatrixProbeAttributes

```
pbc.MapField<string, global.briar.BriarGrpc.MediaMetadata> briar.BriarGrpc.VerifyDatabase↵  
Reply.MatrixProbeAttributes [get]
```

Optional: extra probe attributes

#### 7.98.4.8 MatrixProbeDetections

```
pbc.MapField<string, global.briar.BriarGrpc.Detection> briar.BriarGrpc.VerifyDatabaseReply.↵
MatrixProbeDetections [get]
```

repeated string matrix\_probe\_entry\_types = 10; repeated string matrix\_gallery\_entry\_types = 11;

#### 7.98.4.9 MatrixProbeTracklets

```
pbc.MapField<string, global.briar.BriarGrpc.Tracklet> briar.BriarGrpc.VerifyDatabaseReply.↵
MatrixProbeTracklets [get]
```

Optional: A list of tracklets that correspond to all entries in the probe database

#### 7.98.4.10 Parser

```
pb.MessageParser<VerifyDatabaseReply> briar.BriarGrpc.VerifyDatabaseReply.Parser [static],
[get]
```

#### 7.98.4.11 Progress

```
global.briar.BriarGrpc.BriarProgress briar.BriarGrpc.VerifyDatabaseReply.Progress [get], [set]
```

OPTIONAL: provides progress updates for progress bar display.

See example code for details

#### 7.98.4.12 UsesIntegerSubjectIdGallery

```
bool briar.BriarGrpc.VerifyDatabaseReply.UsesIntegerSubjectIdGallery [get], [set]
```

DEPRECATED: FOR LEGACY SYSTEMS ONLY indicates that the gallery ID returned is of integer form

```

Field number for the "theoretical\_min" field.

#### 7.100.3.14 UsesIntegerGalleryIdFieldNumber

```
const int briar.BriarGrpc.VerifyMatchInfo.UsesIntegerGalleryIdFieldNumber = 13 [static]
```

Field number for the "uses\_integer\_gallery\_id" field.

## 7.100.4 Property Documentation

### 7.100.4.1 Body

`global.briar.BriarGrpc.BriarMedia briar.BriarGrpc.VerifyMatchInfo.Body [get], [set]`

OPTIONAL: Image of Body

### 7.100.4.2 Descriptor

`pbr.MessageDescriptor briar.BriarGrpc.VerifyMatchInfo.Descriptor [static], [get]`

### 7.100.4.3 EntryIdReference

`string briar.BriarGrpc.VerifyMatchInfo.EntryIdReference [get], [set]`

OPTIONAL FOR EVALUATION: the database entry id of the reference image

### 7.100.4.4 EntryIdVerification

`string briar.BriarGrpc.VerifyMatchInfo.EntryIdVerification [get], [set]`

OPTIONAL FOR EVALUATION: the database entry id of the gallery

### 7.100.4.5 Face

`global.briar.BriarGrpc.BriarMedia briar.BriarGrpc.VerifyMatchInfo.Face [get], [set]`

OPTIONAL: Image of face

### 7.100.4.6 Gate

`global.briar.BriarGrpc.BriarMedia briar.BriarGrpc.VerifyMatchInfo.Gate [get], [set]`

OPTIONAL: Image(s) of gait

#### 7.100.4.7 IntegerSubjectIdGallery

```
int briar.BriarGrpc.VerifyMatchInfo.IntegerSubjectIdGallery [get], [set]
```

DEPRECATED: FOR LEGACY SYSTEMS ONLY indicates that the gallery ID returned is of integer form

#### 7.100.4.8 MediaId

```
string briar.BriarGrpc.VerifyMatchInfo.MediaId [get], [set]
```

OPTIONAL: ID of media that probe matched to

#### 7.100.4.9 Parser

```
pb.MessageParser<VerifyMatchInfo> briar.BriarGrpc.VerifyMatchInfo.Parser [static], [get]
```

#### 7.100.4.10 Score

```
float briar.BriarGrpc.VerifyMatchInfo.Score [get], [set]
```

Match Similarity

#### 7.100.4.11 SubjectIdReference

```
string briar.BriarGrpc.VerifyMatchInfo.SubjectIdReference [get], [set]
```

OPTIONAL: subject ID of reference image matched against

#### 7.100.4.12 SubjectIdVerify

```
string briar.BriarGrpc.VerifyMatchInfo.SubjectIdVerify [get], [set]
```

OPTIONAL FOR EVALUATION: subject ID of image to be verified (if known)

#### 7.100.4.13 SubjectName

string briar.BriarGrpc.VerifyMatchInfo.SubjectName [get], [set]

OPTIONAL: Name of subject

#### 7.100.4.14 TheoreticalMax

float briar.BriarGrpc.VerifyMatchInfo.TheoreticalMax [get], [set]

OPTIONAL: the maximum score the algorithm can return

#### 7.100.4.15 TheoreticalMin

float briar.BriarGrpc.VerifyMatchInfo.TheoreticalMin [get], [set]

OPTIONAL: the minimum score that the algorithm can return

#### 7.100.4.16 UsesIntegerGalleryId

bool briar.BriarGrpc.VerifyMatchInfo.UsesIntegerGalleryId [get], [set]

DEPRECATED: FOR LEGACY SYSTEMS ONLY indicates that the gallery ID returned is of integer form

- global::briar.BriarGrpc.BoolOption [ReturnMedia](#) [get, set]  
*OPTIONAL: Should we return media (e.i.*
- global::briar.BriarGrpc.BoolOption [UseDetections](#) [get, set]
- global::briar.BriarGrpc.BoolOption [UseTemplates](#) [get, set]
- global::briar.BriarGrpc.BoolOption [UseWholeImage](#) [get, set]

## 7.102.1 Constructor & Destructor Documentation

### 7.102.1.1 VerifyOptions() [1/2]

```
briar.BriarGrpc.VerifyOptions.VerifyOptions ( ) [inline]
```

### 7.102.1.2 VerifyOptions() [2/2]

```
briar.BriarGrpc.VerifyOptions.VerifyOptions (
    VerifyOptions other ) [inline]
```

## 7.102.2 Member Function Documentation

### 7.102.2.1 CalculateSize()

```
int briar.BriarGrpc.VerifyOptions.CalculateSize ( ) [inline]
```

### 7.102.2.2 Clone()

```
VerifyOptions briar.BriarGrpc.VerifyOptions.Clone ( ) [inline]
```

### 7.102.2.3 Equals() [1/2]

```
override bool briar.BriarGrpc.VerifyOptions.Equals (
    object other ) [inline]
```

### 7.102.2.4 Equals() [2/2]

```
bool briar.BriarGrpc.VerifyOptions.Equals (
    VerifyOptions other ) [inline]
```

### 7.102.2.5 GetHashCode()

```
override int briar.BriarGrpc.VerifyOptions.GetHashCode ( ) [inline]
```

### 7.102.2.6 MergeFrom() [1/2]

```
void briar.BriarGrpc.VerifyOptions.MergeFrom (
    pb::CodedInputStream input ) [inline]
```

### 7.102.2.7 MergeFrom() [2/2]

```
void briar.BriarGrpc.VerifyOptions.MergeFrom (
    VerifyOptions other ) [inline]
```

### 7.102.2.8 ToString()

```
override string briar.BriarGrpc.VerifyOptions.ToString ( ) [inline]
```

### 7.102.2.9 WriteTo()

```
void briar.BriarGrpc.VerifyOptions.WriteTo (
    pb::CodedOutputStream output ) [inline]
```

## 7.102.3 Member Data Documentation

### 7.102.3.1 DebugFieldNumber

```
const int briar.BriarGrpc.VerifyOptions.DebugFieldNumber = 1 [static]
```

Field number for the "debug" field.

### 7.102.3.2 FlagFieldNumber

```
const int briar.BriarGrpc.VerifyOptions.FlagFieldNumber = 11 [static]
```

Field number for the "flag" field.

### 7.102.3.3 ModalityFieldNumber

```
const int briar.BriarGrpc.VerifyOptions.ModalityFieldNumber = 13 [static]
```

Field number for the "modality" field.

#### 7.102.3.4 ReturnMediaFieldNumber

```
const int briar.BriarGrpc.VerifyOptions.ReturnMediaFieldNumber = 12 [static]
```

Field number for the "return\_media" field.

#### 7.102.3.5 UseDetectionsFieldNumber

```
const int briar.BriarGrpc.VerifyOptions.UseDetectionsFieldNumber = 8 [static]
```

Field number for the "use\_detections" field.

#### 7.102.3.6 UseTemplatesFieldNumber

```
const int briar.BriarGrpc.VerifyOptions.UseTemplatesFieldNumber = 9 [static]
```

Field number for the "use\_templates" field.

#### 7.102.3.7 UseWholeImageFieldNumber

```
const int briar.BriarGrpc.VerifyOptions.UseWholeImageFieldNumber = 10 [static]
```

Field number for the "use\_whole\_image" field.

### 7.102.4 Property Documentation

#### 7.102.4.1 Debug

```
global.briar.BriarGrpc.BoolOption briar.BriarGrpc.VerifyOptions.Debug [get], [set]
```

Defines options to use for search operations.

#### 7.102.4.2 Descriptor

```
pbr.MessageDescriptor briar.BriarGrpc.VerifyOptions.Descriptor [static], [get]
```

#### 7.102.4.3 Flag

```
global.briar.BriarGrpc.VerifyFlags briar.BriarGrpc.VerifyOptions.Flag [get], [set]
```

#### 7.102.4.4 Modality

```
global.briar.BriarGrpc.BiometricModality briar.BriarGrpc.VerifyOptions.Modality [get], [set]
```

REQUIRED: If specified use this modality for search operations.

If "UNSPECIFIED" fuse modalities together.

#### 7.102.4.5 Parser

```
pb.MessageParser<VerifyOptions> briar.BriarGrpc.VerifyOptions.Parser [static], [get]
```

#### 7.102.4.6 ReturnMedia

```
global.briar.BriarGrpc.BoolOption briar.BriarGrpc.VerifyOptions.ReturnMedia [get], [set]
```

OPTIONAL: Should we return media (e.i.

cropped images) related to the detections back to the client?

#### 7.102.4.7 UseDetections

```
global.briar.BriarGrpc.BoolOption briar.BriarGrpc.VerifyOptions.UseDetections [get], [set]
```

#### 7.102.4.8 UseTemplates

```
global.briar.BriarGrpc.BoolOption briar.BriarGrpc.VerifyOptions.UseTemplates [get], [set]
```

#### 7.102.4.9 UseWholeImage

```
global.briar.BriarGrpc.BoolOption briar.BriarGrpc.VerifyOptions.UseWholeImage [get], [set]
```

*Field number for the "similarities" field.*

## Properties

- static pb::MessageDescriptor [Descriptor](#) [get]
- global::briar.BriarGrpc.DetectReply [DetectReply](#) [get, set]  
*OPTIONAL: A detect reply to be populated if the service is sending intermediate detection results back to the client*
- global::briar.BriarGrpc.BriarDurations [Durations](#) [get, set]  
*Log the time needed to complete the request on the server*
- global::briar.BriarGrpc.BriarErrors [Errors](#) [get, set]
- global::briar.BriarGrpc.ExtractReply [ExtractReply](#) [get, set]  
*OPTIONAL: An extract reply to be populated if the service is sending intermediate extraction results back to the client*
- static pb::MessageParser< [VerifyReply](#) > [Parser](#) [get]
- bool [ProgressOnlyReply](#) [get, set]  
*REQUIRED: set to true if this is a reply only providing a progress update to the API.*
- global::briar.BriarGrpc.VerifyMatchList [Similarities](#) [get, set]  
*REQUIRED: Match list showing similarities*

## 7.103.1 Constructor & Destructor Documentation

### 7.103.1.1 VerifyReply() [1/2]

```
briar.BriarGrpc.VerifyReply.VerifyReply ( ) [inline]
```

### 7.103.1.2 VerifyReply() [2/2]

```
briar.BriarGrpc.VerifyReply.VerifyReply (
    VerifyReply other ) [inline]
```

## 7.103.2 Member Function Documentation

### 7.103.2.1 CalculateSize()

```
int briar.BriarGrpc.VerifyReply.CalculateSize ( ) [inline]
```

### 7.103.2.2 Clone()

```
VerifyReply briar.BriarGrpc.VerifyReply.Clone ( ) [inline]
```

### 7.103.2.3 Equals() [1/2]

```
override bool briar.BriarGrpc.VerifyReply.Equals (
    object other ) [inline]
```

### 7.103.2.4 Equals() [2/2]

```
bool briar.BriarGrpc.VerifyReply.Equals (
    VerifyReply other ) [inline]
```

### 7.103.2.5 GetHashCode()

```
override int briar.BriarGrpc.VerifyReply.GetHashCode ( ) [inline]
```

### 7.103.2.6 MergeFrom() [1/2]

```
void briar.BriarGrpc.VerifyReply.MergeFrom (
    pb::CodedInputStream input ) [inline]
```

### 7.103.2.7 MergeFrom() [2/2]

```
void briar.BriarGrpc.VerifyReply.MergeFrom (
    VerifyReply other ) [inline]
```

### 7.103.2.8 ToString()

```
override string briar.BriarGrpc.VerifyReply.ToString ( ) [inline]
```

### 7.103.2.9 WriteTo()

```
void briar.BriarGrpc.VerifyReply.WriteTo (
    pb::CodedOutputStream output ) [inline]
```

## 7.103.3 Member Data Documentation

### 7.103.3.1 DetectReplyFieldNumber

```
const int briar.BriarGrpc.VerifyReply.DetectReplyFieldNumber = 4 [static]
```

Field number for the "detect\_reply" field.

### 7.103.3.2 DurationsFieldNumber

```
const int briar.BriarGrpc.VerifyReply.DurationsFieldNumber = 2 [static]
```

Field number for the "durations" field.

### 7.103.3.3 ErrorsFieldNumber

```
const int briar.BriarGrpc.VerifyReply.ErrorsFieldNumber = 3 [static]
```

Field number for the "errors" field.

#### 7.103.3.4 ExtractReplyFieldName

```
const int briar.BriarGrpc.VerifyReply.ExtractReplyFieldName = 5 [static]
```

Field number for the "extract\_reply" field.

#### 7.103.3.5 ProgressOnlyReplyFieldName

```
const int briar.BriarGrpc.VerifyReply.ProgressOnlyReplyFieldName = 6 [static]
```

Field number for the "progress\_only\_reply" field.

#### 7.103.3.6 SimilaritiesFieldName

```
const int briar.BriarGrpc.VerifyReply.SimilaritiesFieldName = 1 [static]
```

Field number for the "similarities" field.

### 7.103.4 Property Documentation

#### 7.103.4.1 Descriptor

```
pbr.MessageDescriptor briar.BriarGrpc.VerifyReply.Descriptor [static], [get]
```

#### 7.103.4.2 DetectReply

```
global.briar.BriarGrpc.DetectReply briar.BriarGrpc.VerifyReply.DetectReply [get], [set]
```

OPTIONAL: A detect reply to be populated if the service is sending intermediate detection results back to the client

#### 7.103.4.3 Durations

```
global.briar.BriarGrpc.BriarDurations briar.BriarGrpc.VerifyReply.Durations [get], [set]
```

Log the time needed to complete the request on the server

#### 7.103.4.4 Errors

`global.briar.BriarGrpc.BriarErrors` `briar.BriarGrpc.VerifyReply.Errors` [get], [set]

#### 7.103.4.5 ExtractReply

`global.briar.BriarGrpc.ExtractReply` `briar.BriarGrpc.VerifyReply.ExtractReply` [get], [set]

OPTIONAL: An extract reply to be populated if the service is sending intermediate extraction results back to the client

#### 7.103.4.6 Parser

`pb.MessageParser<VerifyReply>` `briar.BriarGrpc.VerifyReply.Parser` [static], [get]

#### 7.103.4.7 ProgressOnlyReply

`bool` `briar.BriarGrpc.VerifyReply.ProgressOnlyReply` [get], [set]

REQUIRED: set to true if this is a reply only providing a progress update to the API.

If `progress_only_reply` is set to True, nothing else in the reply needs to be populated

#### 7.103.4.8 Similarities

`global.briar.BriarGrpc.VerifyMatchList` `briar.BriarGrpc.VerifyReply.Similarities` [get], [set]

REQUIRED: Match list showing similarities

- global::briar.BriarGrpc.VerifyOptions [VerifyOptions](#) [get, set]  
*REQUIRED options for verification*

### 7.104.1 Detailed Description

Performs 1-to-1 Media Verification in a streaming paradigm (streams reference media in first, then streams in verification media)

## 7.104.2 Constructor & Destructor Documentation

### 7.104.2.1 VerifyRequest() [1/2]

```
briar.BriarGrpc.VerifyRequest.VerifyRequest ( ) [inline]
```

### 7.104.2.2 VerifyRequest() [2/2]

```
briar.BriarGrpc.VerifyRequest.VerifyRequest (
    VerifyRequest other ) [inline]
```

## 7.104.3 Member Function Documentation

### 7.104.3.1 CalculateSize()

```
int briar.BriarGrpc.VerifyRequest.CalculateSize ( ) [inline]
```

### 7.104.3.2 Clone()

```
VerifyRequest briar.BriarGrpc.VerifyRequest.Clone ( ) [inline]
```

### 7.104.3.3 Equals() [1/2]

```
override bool briar.BriarGrpc.VerifyRequest.Equals (
    object other ) [inline]
```

### 7.104.3.4 Equals() [2/2]

```
bool briar.BriarGrpc.VerifyRequest.Equals (
    VerifyRequest other ) [inline]
```

### 7.104.3.5 GetHashCode()

```
override int briar.BriarGrpc.VerifyRequest.GetHashCode ( ) [inline]
```

### 7.104.3.6 MergeFrom() [1/2]

```
void briar.BriarGrpc.VerifyRequest.MergeFrom (
    pb::CodedInputStream input ) [inline]
```

### 7.104.3.7 MergeFrom() [2/2]

```
void briar.BriarGrpc.VerifyRequest.MergeFrom (
    VerifyRequest other ) [inline]
```

### 7.104.3.8 ToString()

```
override string briar.BriarGrpc.VerifyRequest.ToString ( ) [inline]
```

### 7.104.3.9 WriteTo()

```
void briar.BriarGrpc.VerifyRequest.WriteTo (
    pb::CodedOutputStream output ) [inline]
```

## 7.104.4 Member Data Documentation

### 7.104.4.1 DetectionsFieldNumber

```
const int briar.BriarGrpc.VerifyRequest.DetectionsFieldNumber = 3 [static]
```

Field number for the "detections" field.

#### 7.104.4.2 DetectOptionsFieldNumber

```
const int briar.BriarGrpc.VerifyRequest.DetectOptionsFieldNumber = 6 [static]
```

Field number for the "detect\_options" field.

#### 7.104.4.3 DurationsFieldNumber

```
const int briar.BriarGrpc.VerifyRequest.DurationsFieldNumber = 5 [static]
```

Field number for the "durations" field.

#### 7.104.4.4 ExtractOptionsFieldNumber

```
const int briar.BriarGrpc.VerifyRequest.ExtractOptionsFieldNumber = 7 [static]
```

Field number for the "extract\_options" field.

#### 7.104.4.5 FlagFieldNumber

```
const int briar.BriarGrpc.VerifyRequest.FlagFieldNumber = 9 [static]
```

Field number for the "flag" field.

#### 7.104.4.6 MediaFieldNumber

```
const int briar.BriarGrpc.VerifyRequest.MediaFieldNumber = 1 [static]
```

Field number for the "media" field.

#### 7.104.4.7 ReferenceTmplsFieldNumber

```
const int briar.BriarGrpc.VerifyRequest.ReferenceTmplsFieldNumber = 4 [static]
```

Field number for the "reference\_tmpls" field.

#### 7.104.4.8 RoleFieldName

```
const int briar.BriarGrpc.VerifyRequest.RoleFieldName = 2 [static]
```

Field number for the "role" field.

#### 7.104.4.9 VerifyOptionsFieldName

```
const int briar.BriarGrpc.VerifyRequest.VerifyOptionsFieldName = 8 [static]
```

Field number for the "verify\_options" field.

### 7.104.5 Property Documentation

#### 7.104.5.1 Descriptor

```
pbr.MessageDescriptor briar.BriarGrpc.VerifyRequest.Descriptor [static], [get]
```

#### 7.104.5.2 Detections

```
pbc.RepeatedField<global.briar.BriarGrpc.Detection> briar.BriarGrpc.VerifyRequest.Detections  
[get]
```

OPTIONAL Reference Images

#### 7.104.5.3 DetectOptions

```
global.briar.BriarGrpc.DetectOptions briar.BriarGrpc.VerifyRequest.DetectOptions [get],  
[set]
```

REQUIRED options for detection

#### 7.104.5.4 Durations

```
global.briar.BriarGrpc.BriarDurations briar.BriarGrpc.VerifyRequest.Durations [get], [set]
```

Log the time needed to complete the request on the server

#### 7.104.5.5 ExtractOptions

```
global.briar.BriarGrpc.ExtractOptions briar.BriarGrpc.VerifyRequest.ExtractOptions [get],  
[set]
```

REQUIRED options for extraction

#### 7.104.5.6 Flag

```
global.briar.BriarGrpc.VerifyFlags briar.BriarGrpc.VerifyRequest.Flag [get], [set]
```

flags to control whether to verify from templates, images, or detections+images

#### 7.104.5.7 Media

```
global.briar.BriarGrpc.BriarMedia briar.BriarGrpc.VerifyRequest.Media [get], [set]
```

REQUIRED Frames to be verified.

#### 7.104.5.8 Parser

```
pb.MessageParser<VerifyRequest> briar.BriarGrpc.VerifyRequest.Parser [static], [get]
```

#### 7.104.5.9 ReferenceTmpls

```
global.briar.BriarGrpc.TemplateList briar.BriarGrpc.VerifyRequest.ReferenceTmpls [get], [set]
```

OPTIONAL Reference Templates

#### 7.104.5.10 Role

```
global.briar.BriarGrpc.VerifyRequest.Types.VerifyRole briar.BriarGrpc.VerifyRequest.Role [get],  
[set]
```

REQUIRED set this to "reference" for all reference input, and "verify" if if the given request contains media to be verified

#### 7.104.5.11 VerifyOptions

```
global.briar.BriarGrpc.VerifyOptions briar.BriarGrpc.VerifyRequest.VerifyOptions [get], [set]
```

REQUIRED options for verification
